

Operating Instructions Security Reference

Read this manual carefully before you use this machine and keep it handy for future reference. For safe and correct use, be sure to read the Safety Information in "About This Machine" before using the machine.

Introduction

This manual contains detailed instructions and notes on the operation and use of this machine. For your safety and benefit, read this manual carefully before using the machine. Keep this manual in a handy place for quick reference.

Important

Contents of this manual are subject to change without prior notice. In no event will the company be liable for direct, indirect, special, incidental, or consequential damages as a result of handling or operating the machine.

Do not copy or print any item for which reproduction is prohibited by law.

Copying or printing the following items is generally prohibited by local law:

bank notes, revenue stamps, bonds, stock certificates, bank drafts, checks, passports, driver's licenses.

The preceding list is meant as a guide only and is not inclusive. We assume no responsibility for its completeness or accuracy. If you have any questions concerning the legality of copying or printing certain items, consult with your legal advisor.

Notes

Some illustrations in this manual might be slightly different from the machine.

Certain options might not be available in some countries. For details, please contact your local dealer.

Depending on which country you are in, certain units may be optional. For details, please contact your local dealer.

Caution:

Use of controls or adjustments or performance of procedures other than those specified in this manual might result in hazardous radiation exposure.

Manuals for This Machine

Refer to the manuals that are relevant to what you want to do with the machine.

∰Important

- □ Media differ according to manual.
- □ The printed and electronic versions of a manual have the same contents.
- Adobe Acrobat Reader/Adobe Reader must be installed in order to view the manuals as PDF files.
- Depending on which country you are in, there may also be html manuals. To view these manuals, a Web browser must be installed.

About This Machine

Be sure to read the Safety Information in this manual before using the machine.

This manual provides an introduction to the functions of the machine. It also explains the control panel, preparation procedures for using the machine, how to enter text, and how to install the CD-ROMs provided.

✤ General Settings Guide

Explains User Tools settings, and Address Book procedures such as registering fax numbers, e-mail addresses, and user codes. Also refer to this manual for explanations on how to connect the machine.

Troubleshooting

Provides a guide to solving common problems, and explains how to replace paper, toner, and other consumables.

Security Reference

This manual is for administrators of the machine. It explains security functions that you can use to prevent unauthorized use of the machine, data tampering, or information leakage.

For enhanced security, we recommend the following settings.

- Install the Server Certificate.
- Enable SSL (Secure Sockets Layer) Encryption.
- Change the user name and password of the administrator using Web Image Monitor.

For details, see "Setting up the Machine", Security Reference.

Be sure to read this manual when setting the enhanced security functions, or user and administrator authentication.

Copy Reference

Explains Copier functions and operations. Also refer to this manual for explanations on how to place originals.

Facsimile Reference

Explains Facsimile functions and operations.

Printer Reference

Explains Printer functions and operations.

Scanner Reference

Explains Scanner functions and operations.

Network Guide

Explains how to configure and operate the machine in a network environment, and use the software provided.

This manual covers all models, and includes descriptions of functions and settings that might not be available on this machine. Images, illustrations, and information about operating systems that are supported might also differ slightly from those of this machine.

How to Read This Manual

Symbols

This manual uses the following symbols:

A WARNING:

Indicates important safety notes.

Ignoring these notes could result in serious injury or death. Be sure to read these notes. They can be found in the "Safety Information" section of About This Machine.

A CAUTION:

Indicates important safety notes.

Ignoring these notes could result in moderate or minor injury, or damage to the machine or to property. Be sure to read these notes. They can be found in the "Safety Information" section of About This Machine.

Important

Indicates points to pay attention to when using the machine, and explanations of likely causes of paper misfeeds, damage to originals, or loss of data. Be sure to read these explanations.

🖉 Note

Indicates supplementary explanations of the machine's functions, and instructions on resolving user errors.

₽ Reference

This symbol is located at the end of sections. It indicates where you can find further relevant information.

[]

Indicates the names of keys that appear on the machine's display panel.

Indicates the names of keys on the machine's control panel.

Display

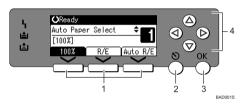

The display panel shows machine status, error messages, and function menus. When you select or specify an item on the display panel, it is highlighted like

∰Important

□ A force or impact of more than 30 N (about 3 kgf) will damage the display. The copy display is set as the default screen when the machine is turned on.

| O Ready | | | |
|----------------|----------|------|-----|
| Auto Pape | r Select | \$ | |
| [100%] | | | |
| 100% | R/E | Auto | R/E |

Reading the Display and Using Keys

1. Selection keys

Correspond to items at the bottom line on the display.

Example: initial copy display

- When the instruction "press [100%]" appears in this manual, press the left selection key.
- When the instruction "press [R/E]" appears in this manual, press the centre (center) selection key.
- When the instruction "press **[Auto R/E]**" appears in this manual, press the right selection key.

2. [Escape] key

Press to cancel an operation or return to the previous display.

3. [OK] key

Press to set a selected item or entered numeric value.

4. Scroll keys

Press to move the cursor to each direction one by one.

When $[\land] [\lor] [\lor]$, or $[\land]$ key appears in this manual, press the scroll key of the same direction.

1. Getting Started

Enhanced Security

The machine's security functions are reinforced by means of realization of device and user management, through extended authentication functions.

By specifying access limits on the machine's functions and the documents and data stored in the machine, you can prevent information leaks and unauthorized access.

Data encryption can prevent unauthorized data access and tampering via the network.

Authentication and Access Limits

Using authentication, administrators manage the machine and its users. To enable authentication, information about both administrators and users must be registered in order to authenticate users via their login user names and passwords.

Four types of administrators manage specific areas of machine usage, such as settings and user registration.

Access limits for each user are specified by the administrator responsible for user access to the machine functions, and the documents and data stored in the machine.

For details, see p.11 "Administrators".

Encryption Technology

This machine can establish secure communication paths by encrypting transmitted data and passwords.

Glossary

Administrator

There are four types of administrators: machine administrator, network administrator, file administrator, and user administrator. A single administrator can perform the tasks of multiple administrators. However, we recommend that only one person take each administrator role.

Basically, administrators make machine settings and manage the machine; they cannot perform normal operations, such as copying and printing.

User

A user performs normal operations on the machine, such as copying and printing.

Registered User

Users with personal information registered in the address book who have a login password and user name.

Administrator Authentication

Administrators are authenticated by means of the login user name and login password supplied by the administrator when specifying the machine's settings or accessing the machine over the network.

User Authentication

Users are authenticated by means of the login user name and login password supplied by the user when specifying the machine's settings or accessing the machine over the network.

The user's login user name and password, as well as personal information items as telephone number and e-mail address, are stored in the machine's address book. The personal information can be obtained from the Windows domain controller (windows authentication), LDAP Server (LDAP authentication), or Integration Server (Integration Server Authentication) connected to the machine via the network.

Login

This action is required for administrator authentication and user authentication. Enter your login user name and login password on the machine's control panel.

A login user name and login password may also be supplied when accessing the machine over the network or using such utilities as Web Image Monitor and SmartDeviceMonitor for Admin.

Logout

This action is required with administrator and user authentication. This action is required when you have finished using the machine or changing the settings.

Setting Up the Machine

If you want higher security, make the following setting before using the machine:

1 Turn the machine on.

2 Press the [User Tools/Counter] key.

B Select [System Settings] using [▲] or [▼], and then press the [OK] key.

⊟User Tools 1/4 ≑OK) Counter <mark>System Settings</mark>

Select [Interface Settings] using [▲] or [▼], and then press the [OK] key.

⊟System Settings 2/2 ‡OK)

Interface Settings

File Transfer

Administrator Tools

5 Select [Network] using [▲] or [▼], and then press the [OK] key.

⊟Interface 1/1 **¢**0K) <mark>Network</mark> Print I/F Settings List

O Specify IP Address.

For details, see the General Settings Guide.

2 Connect the machine to the network.

B Start Web Image Monitor, and then log on to the machine as the administrator.

- **9** Install the server certificate.
- Enable secure sockets layer (SSL).

1 Enter the administrator's user name and password.

The administrator's default account (user name: "admin" ; password: blank) is unencrypted between steps **7** to **1**. If acquired during this time, this account information could be used to gain unauthorized access to the machine over the network.

If you consider this risky, we recommend that you specify a temporary administrator password between steps **1** and **2**.

Reference

p.20 "Registering the Administrator"

Using Web Image Monitor

Using Web Image Monitor, you can log on to the machine and change the administrator settings.

This section describes how to access Web Image Monitor.

1 Start your Web browser.

2 Enter "http://(machine's address)/" in the address bar of the Web browser.

Top page of Web Image Monitor appears.

Click [Login].

4 Enter a login user name and password, and then click [Login].

For details about the login user name and password, consult your network administrator.

Click [Address Book].

🖉 Note

For details about how to register names in the Address Book by using Web Image Monitor, see the Web Image Monitor Help.

Security Measures Provided by this Machine

Using Authentication and Managing Users

Enabling Authentication

To control administrators' and users' access to the machine, perform administrator authentication and user authentication using login user names and login passwords. To perform authentication, the authentication function must be enabled.

PReference

For details, see p.16 "Enabling Authentication".

Specifying Authentication Information to Log on

Users are managed using the personal information in the machine's address book.

By enabling user authentication, you can allow only people registered in the address book to use the machine. Users can be managed in the address book by the user administrator.

For details, see p.43 "Specifying Authentication Information to Log on".

Specifying Which Functions are Available

This can be specified by the user administrator. Specify the functions available to registered users. By making this setting, you can limit the functions available to users.

For details, see p.98 "Specifying Which Functions are Available".

Preventing Information Leaks

Preventing Unauthorized Copying (Unauthorized Copy Prevention)

Using the printer driver, you can embed mask and pattern in the printed document.

PReference

For details, see p.79 "Preventing Unauthorized Copying".

Guarding Against Unauthorized Copying (Data Security for Copying)

Using the printer driver to enable data security for the copying function, you can print a document with an embedded pattern of hidden text. To gray out the copy of a copy-guarded document when the document is copied or stored, the optional Copy Data Security Unit is required.

Limitation

□ The optional Copy Data Security Unit is not available for this machine.

Reference

For details, see p.79 "Preventing Unauthorized Copying".

Preventing Data Leaks Due to Unauthorized Transmission

You can specify in the address book which users are allowed to send files using the scanner or fax function.

You can also limit the direct entry of destinations to prevent files from being sent to destinations not registered in the address book.

Reference

For details, see p.85 "Preventing Data Leaks Due to Unauthorized Transmission".

Protecting Registered Information in the Address Book

You can specify who is allowed to access the data in the address book. You can prevent the data in the address book being used by unregistered users. To protect the data from unauthorized reading, you can also encrypt the data in the address book.

Reference

For details, see p.87 "Protecting the Address Book".

Managing Log Files

You can improve data security by deleting log files stored in the machine. By transferring the log files, you can check the history data and identify unauthorized access.

To transfer the log data, Web SmartDeviceMonitor Professional IS/Standard is required.

Reference

For details, see p.101 "Managing Log Files".

Limiting and Controlling Access

Preventing Modification of Machine Settings

The machine settings that can be modified according to the type of administrator account.

Register the administrators so that users cannot change the administrator settings.

PReference

For details, see p.93 "Preventing Modification of Machine Settings".

Limiting Available Functions

To prevent unauthorized operation, you can specify who is allowed to access each of the machine's functions.

PReference

For details, see p.98 "Limiting Available Functions".

Enhanced Network Security

Preventing Unauthorized Access

You can limit IP addresses or disable ports to prevent unauthorized access over the network and protect the address book, stored files, and default settings.

PReference

For details, see p.103 "Preventing Unauthorized Access".

Encrypting Transmitted Passwords

Prevent login passwords, group passwords for PDF files, and IPP authentication passwords from being revealed by encrypting them for transmission. Also, encrypt the login password for administrator authentication and user authentication.

For details, see p.109 "Encrypting Transmitted Passwords".

Safer Communication Using SSL

When you access the machine using a Web Image Monitor or IPP, you can establish encrypted communication using SSL. When you access the machine using an application such as SmartDeviceMonitor for Admin, you can establish encrypted communication using SNMPv3 or SSL.

To protect data from interception, analysis, and tampering, you can install a server certificate in the machine, negotiate a secure connection, and encrypt transmitted data.

🖉 Note

□ To establish encrypted communication using SSL, the machine must have the printer and scanner functions.

Reference

For details, see p.115 "Protection Using Encryption".

2. Authentication and its Application

Administrators and Users

When controlling access using the authentication specified by an administrator, select the machine's administrator, enable the authentication function, and then use the machine.

The administrators manage access to the allocated functions, and users can use only the functions they are permitted to access. To enable the authentication function, the login user name and login password are required in order to use the machine.

Specify administrator authentication, and then specify user authentication.

∰Important

□ If user authentication is not possible because of a problem with the network, you can use the machine by accessing it using administrator authentication and disabling user authentication. Do this if, for instance, you need to use the machine urgently.

PReference

For details, see p.40 "Specifying Login User Name and Login Password".

Administrators

There are four types of administrators: machine administrator, network administrator, file administrator, and user administrator.

The sharing of administrator tasks eases the burden on individual administrators while also limiting unauthorized operation by administrators. You can also specify a supervisor who can change each administrator's password. Administrators are limited to managing the machine's settings and controlling user access, so they cannot use functions such as copying and printing. To use such functions, you need to register a user in the Address Book and then be authenticated as the user.

PReference

For details, see p.20 "Registering the Administrator". For details, see p.141 "Supervisor Operations".

User Administrator

This is the administrator who manages personal information in the address book.

A user administrator can register/delete users in the address book or change users' personal information.

Users registered in the address book can also change and delete their own information. If any of the users forget their password, the user administrator can delete it and create a new one, allowing the user to access the machine again.

Machine Administrator

This is the administrator who mainly manages the machine's default settings. You can set the machine so that the default for each function can only be specified by the machine administrator. By making this setting, you can prevent unauthorized people from changing the settings and allow the machine to be used securely by its many users.

Network Administrator

This is the administrator who manages the network settings. You can set the machine so that network settings such as the IP address and the settings for sending and receiving e-mail can only be specified by the network administrator. By making this setting, you can prevent unauthorized users from changing the settings and disabling the machine, and thus ensure correct network operation.

File Administrator

This administrator can confirm the printer log information.

Supervisor

The supervisor can delete an administrator's password and specify a new one. The supervisor cannot specify defaults or use normal functions. However, if any of the administrators forget their password and cannot access the machine, the supervisor can provide support.

User

Users are managed using the personal information in the machine's address book.

By enabling user authentication, you can allow only people registered in the address book to use the machine. Users can be managed in the address book by the user administrator.

Reference

For details about registering users in the address book, see General Settings Guide, the SmartDeviceMonitor for Admin Help, or the Web Image Monitor Help.

The Management Function

The machine has an authentication function requiring a login user name and login password. By using the authentication function, you can specify access limits for individual users and groups of users. Using access limits, you can not only limit the machine's available functions, but also protect the machine settings and the files and data stored in the machine.

∰Important

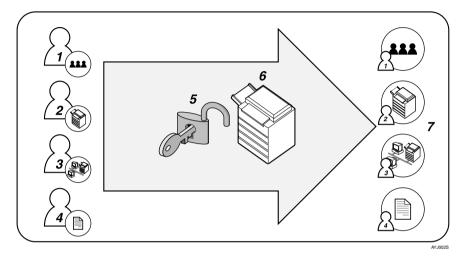

- If you have enabled [Admin. Auth. Management], make sure not to forget the administrator login user name and login password. If an administrator login user name or login password is forgotten, a new password must be specified using the supervisor's authority.
- Be sure not to forget the supervisor login user name and login password. If you do forget them, a service representative will to have to return the machine to its default state. This will result in all data in the machine being lost and the service call may not be free of charge.

Reference

For details, see p.141 "Supervisor Operations".

About Administrator Authentication

There are four types of administrators according to the administered function: user administrator, machine administrator, network administrator, and file administrator.

1. User Administrator

This administrator manages personal information in the address book. You can register/delete users in the address book or change users' personal information.

2. Machine Administrator

This administrator manages the machine's default settings. It is possible to enable only the machine administrator to set data security for copying, log deletion, and other defaults.

3. Network Administrator

This administrator manages the network settings. You can set the machine so that network settings such as the IP address and the settings for sending and receiving e-mail can be specified by the network administrator only.

4. File Administrator

This administrator can confirm the printer log information.

5. Authentication

Administrators must enter their login user name and password to be authenticated.

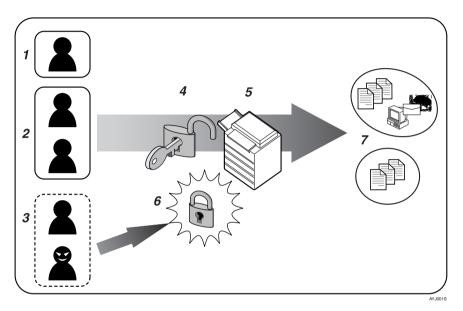

6. This machine

7. Administrators manage the machine's settings and access limits. For details about each administrator, see p.11 "Administrators".

About User Authentication

This machine has an authentication function to prevent unauthorized access.

By using login user name and login password, you can specify access limits for individual users and groups of users.

1. User

A user performs normal operations on the machine, such as copying and printing.

2. Group

A group performs normal operations on the machine, such as copying and printing.

3. Unauthorized User

4. Authentication

Using a login user name and password, user authentication is performed.

5. This Machine

6. Access Limit

Using authentication, unauthorized users are prevented from accessing the machine.

7. Authorization

Authorized users and groups can use only those functions permitted by the administrator.

Enabling Authentication

To control administrators' and users' access to the machine, perform administrator or user authentication using login user names and passwords. To perform authentication, the authentication function must be enabled. To specify authentication, you need to register administrators.

Reference

For details, see p.20 "Registering the Administrator".

Authentication Setting Procedure

Specify administrator authentication and user authentication according to the following chart.

🖉 Note

- To specify Basic Authentication, Windows Authentication, LDAP Authentication, or Integration Server Authentication, you must first specify administrator authentication.
- You can specify User Code Authentication without specifying administrator authentication.

| Administrator Authentication | Specifying Administrator Privileges |
|----------------------------------|---|
| See p.18 "Specifying Administra- | See p.18 "Specifying Administrator Privileges". |
| tor Privileges". | Registering the Administrator |
| | See p.20 "Registering the Administrator". |
| User Authentication | Specifying User Authentication |
| See p.16 "Enabling Authentica- | ① Authentication that requires only the machine: |
| tion". | • User Code Authentication See p.30 "User Code Authentication". |
| | Basic Authentication See p.35 "Basic Authentication". |
| | ② Authentication that requires external devices: |
| | Windows Authentication See p.46 "Windows Authentication". |
| | LDAP Authentication See p.56 "LDAP Authentication". |
| | Integration Server Authentication See p.64 "Integration Server Authentication". |

Administrator Authentication

Administrators are handled differently from the users registered in the address book. When registering an administrator, you cannot use a login user name already registered in the address book. Windows Authentication, LDAP Authentication and Integration Server Authentication are not performed for an administrator, so an administrator can log on even if the server is unreachable due to a network problem.

Each administrator is identified by a login user name. One person can act as more than one type of administrator if multiple administrator authority is granted to a single login user name.

You can specify the login user name, login password, and encryption password for each administrator.

The encryption password is a password for performing encryption when specifying settings using Web Image Monitor or SmartDeviceMonitor for Admin.

The password registered in the machine must be entered when using applications such as SmartDeviceMonitor for Admin.

Administrators are limited to managing the machine's settings and controlling user access, so they cannot use functions such as copying and printing. To use such functions, you need to register a user in the address book and then be authenticated as the user.

🖉 Note

Administrator authentication can also be specified via Web Image Monitor. For details see the Web Image Monitor Help.

Specifying Administrator Privileges

To specify administrator authentication, set Administrator Authentication Management to **[On]**. You can also specify whether or not to manage the items in System Settings as an administrator.

To log on as an administrator, use the default login user name and login password.

The defaults are "admin" for the login name and blank for the password.

∰Important

If you have enabled [Admin. Auth. Management], make sure not to forget the administrator login user name and login password. If an administrator login user name or login password is forgotten, a new password must be specified using the supervisor's authority.

For details, see p.141 "Supervisor Operations".

🖉 Note

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$OK |
|-----------------|-----|------|
| Counter | | |
| System Settings | | |
| | | |

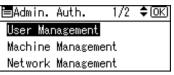

• Select [Administrator Tools] using [▲] or [▼], and then press the [OK] key.

4 Select [Admin. Auth. Management] using [▲] or [▼], and then press the [OK] key.

 Select the [User Management], [Machine Management], [Network Management], or [File Management] using [▲] or [▼], and then press the [OK] key.

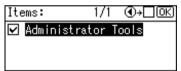

Select [On] using [▲] or [▼], and then press [Items].

| User | Management: | -1/1 | \$ОК) |
|------|-------------|------|-------|
| On | | | |
| Off | | | |
| Ite | ms | | |

[Items] appears.

Select the settings to manage from "Items" using [▶], and then press the [OK] key.

The selected settings will be unavailable to users.

[Items] varies depending on the administrator.

The box next to a selected item is checked. To deselect the item, press [\blacktriangleleft].

For details about Available Settings, see p.93 "Managing Access to the Machine".

🖉 Note

□ To specify administrator authentication for more than one category, repeat steps 5 to 7.

B Press the [User Tools/Counter] key.

Registering the Administrator

If administrator authentication has been specified, we recommended that each administrator role is assigned to a different person.

The sharing of administrator tasks eases the burden on individual administrators while also limiting unauthorized operation by administrators.

Administrator authentication can also be specified via Web Image Monitor. For details see the Web Image Monitor Help.

Preparation

Log on using a registered administrator name and password. The administrator defaults are "admin" for the login name and blank for the password. For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

🔗 Note

- You can use up to 32 alphanumeric characters and symbols when registering login user names and login passwords. Keep in mind that passwords are case-sensitive.
- User names cannot contain numbers only, spaces, semicolons (;), or quotes ("), nor can they be left blank.
- Do not use Japanese, Traditional Chinese, Simplified Chinese, or Korean double-byte characters when entering the login user name or password. If you use double-byte characters when entering the login user name or password, you cannot authenticate using Web Image Monitor.

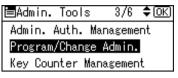

Press the [User Tools/Counter] key.

Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ≡User Tools | 1/4 | \$ОК |

| Pleas | se | re-enter | passwor | d. |
| abc | _ | | | |
| | | | | |

¹ Select [Encryption Password] using [▲] or [▼], and then press the [OK] key.

D Enter the encryption password, and then press the [OK] key.

| Enery | yption Password: | (OK) |
|-------|------------------|------|
| Entei | r password. | |
| abc | _ | |
| | | |

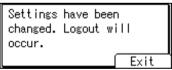

If a password reentry screen appears, enter the encryption password, and then press the [OK] key.

Confirm Encr.Password: (OK) Please re-enter password. abc _

Press [Exit] three times.

DPress [Exit].

You will be automatically logged off.

Press the [User Tools/Counter] key.

Logging on Using Administrator Authentication

If administrator authentication has been specified, log on using an administrator's user name and password. This section describes how to log on.

🖉 Note

- To log on as an administrator, enter the administrator's login user name and login password.
- □ If you try to log on from an operating screen, "Selected function cannot be used. Press [Cancel]" appears. Press the **[User Tools/Counter]** key to change the default.

Press the [User Tools/Counter] key.

2 Press [Login].

| ⊟User Tools | 1/4 | \$ОК |

| | | | | | |

🖉 Note

When you log on to the machine for the first time as the administrator, enter "admin".

4 Enter the login password, and then press the [OK] key.

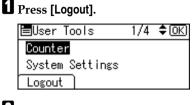

| Login: | OK |
|-----------------------|----|
| Enter login password. | |
| abc _ | |
| | |

🔗 Note

□ If assigning the administrator for the first time, press the **[OK]** key without entering login password.

Logging off Using Administrator Authentication

If administrator authentication has been specified, be sure to log off after completing settings. This section explains how to log off after completing settings.

2 Press [Yes].

| Are you sure | |
|--------------|-----|
| you want to | |
| log out? | |
| No | Yes |

Changing the Administrator

Change the administrator's login user name and login password. You can also assign each administrator's authority to the login user names "Administrator 1" to "Administrator 4". To combine the authorities of multiple administrators, assign multiple administrators to a single administrator.

For example, to allocate the machine administrator and user administrator access privileges to "Administrator 1", set machine administrator and user administrator to "Administrator 1" in "Permissions".

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

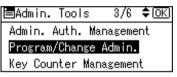

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ОК) |

| Administrator1 | | |
| Administrator2 | | |
| Administrator3 | | |

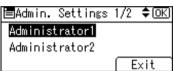

8 Press [Exit].

Select [Admin. Detailed Settings] using [▲] or [▼], and then press the [OK] key.

Select the administrator you want to change settings using [▲] or [▼], and then press the [OK] key, and re-enter the setting.

Dress [Exit] three times.

Press [Exit].

Settings have been changed. Logout will occur. Exit

You are logged off automatically.

Press the [User Tools/Counter] key.

Using Web Image Monitor

Using Web Image Monitor, you can log on to the machine and change the administrator settings. This section describes how to access the Web Image Monitor.

1 Start your web browser.

2 Enter "http://(machine's address)/" in the address bar of the Web browser. Top page of Web Image Monitor appears.

Click [Login].

4 Enter the login name and password of an administrator, and then click [Login]

5 Make setting as desired.

🖉 Note

- When logging on as an administrator use the login name and password of an administrator set in the machine. The default login name is "admin" and the password is blank.
- □ For details about Web Image Monitor, see the Web Image Monitor Help.

User Authentication

There are five types of user authentication methods; user code authentication, basic authentication, Windows authentication, LDAP authentication, and Integration Sever Authentication. To use user authentication, select an authentication method on the control panel, and then make the required settings for the authentication. The settings depend on the authentication method.

∰Important

When using Windows authentication or LDAP authentication, keep in mind that if you edit an authenticated user's e-mail address or any of the other data that is automatically stored after successful authentication, the edited data may be overwritten when it is reacquired at the next authentication.

🖉 Note

- Under user code authentication, authentication is based on the user code. In contrast, under basic authentication, Windows authentication, LDAP authentication, and Integration Server Authentication, authentication is carried out for individual users.
- The user code account, that has no more than eight digits and is used for User Code authentication, can be carried over and used as a login user name even after the authentication method has switched from User Code authentication to BASIC authentication, Windows authentication, LDAP authentication, or Integration Server authentication. In this case, since the User Code authentication does not have a password, the login password is set as a blank account. When the authentication method switches to an external authentication (Windows authentication, LDAP authentication, or Integration Server authentication), authentication will not occur, unless the external authentication device has previously registered the carried over user code account. However, the user code account will remain in the Address Book of the machine in spite of the authentication failure. From a security perspective, when switching from User Code authentication to another authentication method, we recommend that you delete accounts you are not going to use, or set up a login password. For details about deleting accounts or changing the password, see "Registering Names", General Settings Guide.
- \square You cannot use more than one authentication method at the same time.
- User authentication can also be specified via Web Image Monitor. For details see the Web Image Monitor Help.

User Code Authentication

This is an authentication method for limiting access to functions according to the user code. The same user code can be used by more than one user. For details about specifying user codes, see General Settings Guide.

PReference

For details about specifying the user code for the printer driver, see Printer Reference or the printer driver Help.

For details about specifying the user code for the LAN fax driver, see Facsimile Reference.

For details about specifying the TWAIN driver user code, see the TWAIN driver Help.

Specifying User Code Authentication

This can be specified by the machine administrator.

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ≡User Tools | 1/4 | \$OK |

| \checkmark | Printer | :Auto Program |

The box next to a selected item is checked. To deselect the item, press [4]. User Code Authentication will be applied to the selected functions.

Unselected functions will not be affected.

For details about [Restrict Functions], see p.98 "Limiting Available Functions".

8 Press the [OK] key.

Select [Printer Job Authentication] using [▲] or [▼], and then press the [OK] key.

| ⊟Det. Settings | - 1/1 | \$OK |
|------------------|--------|-------|
| Restrict Functio | ons | |
| Printer Job Auth | nentic | ation |
| | E | xit |

D Select the "Printer Job Authentication" level.

🖉 Note

- If you select [Entire], you cannot print using a printer driver or a device that does not support authentication. To print in an environment that does not support authentication, select [Simple(All)] or [Simple(Limitation)].
- □ If you select [Simple(Limitation)], you can specify clients for which printer job authentication is not required. Specify [Parallel Interface(Sim.)], [USB(Sim.)] and the clients' IPv4 address range in which printer job authentication is not required. Specify this setting if you want to print using unauthenticated printer drivers or without any printer driver. Authentication is required for printing with non-specified devices.
- □ If you select **[Simple(All)]** or **[Simple(Limitation)]**, you can print even with unauthenticated printer drivers or devices. Specify this setting if you want to print with a printer driver or device that cannot be identified by the machine or if you do not require authentication for printing. However, note that because the machine does not require authentication in this case, it may be used by unauthorized users.

If you select [Entire], proceed to step 2.

If you select [Simple(All)] or [Simple(Limitation)], proceed to step [].

Press the [User Tools/Counter] key.

Windows Authentication

Specify this authentication when using the Windows domain controller to authenticate users who have their accounts on the directory server. Users cannot be authenticated if they do not have their accounts in the directory server. Under Windows authentication, you can specify the access limit for each group registered in the directory server. The address book stored in the directory server can be registered to the machine, enabling user authentication without first using the machine to register individual settings in the address book. If you can obtain user information, the sender's address (From:) is fixed to prevent unauthorized access when sending e-mails under the scanner function.

- If global groups have been registered under Windows server, you can limit the use of functions for each global group.
- You need to create global groups in the Windows server in advance and register in each group the users to be authenticated.
- You also need to register in the machine the functions available to the global group members.
- Create global groups in the machine by entering the names of the global groups registered in the Windows Server. (Keep in mind that group names are case sensitive.) Then specify the machine functions available to each group.
- If global groups are not specified, users can use the available functions specified in [*Default Group]. If global groups are specified, users not registered in global groups can use the available functions specified in [*Default Group]. By default, all functions are available to [*Default Group] members. Specify the limitation on available functions according to user needs.

Important

During Windows Authentication, data registered in the directory server, such as the user's e-mail address, is automatically registered in the machine. If user information on the server is changed, information registered in the machine may be overwritten when authentication is performed.

Operational Requirements for Windows Authentication

- To specify Windows authentication, the following requirements must be met:
- The Printer/Scanner unit must be installed.
 - A domain controller has been set up in a designated domain.
 - This function is supported by the operating systems listed below. NTLM authentication is used for Windows authentication. To obtain user information when running Active Directory, use LDAP. If SSL is being used, this requires a version of Windows that supports TLS v1, SSL v2, or SSL v3.
 - Windows NT 4.0 Server
 - Windows 2000 Server
 - Windows Server 2003

Limitation

- Users managed in other domains are subject to user authentication, but they cannot obtain items such as e-mail addresses.
- If you have created a new user in the domain controller and selected [User must change password at next logon], log on to the machine from the computer to change the password before logging on from the machine's control panel.

🖉 Note

- □ The first time you access the machine, you can use the functions available to your group. If you are not registered in a group, you can use the functions available under [*Default Group]. To limit which functions are available to which users, first make settings in advance in the address book.
- □ When accessing the machine subsequently, you can use all the functions available to your group and to you as an individual user.
- □ Enter the login password correctly, keeping in mind that it is case-sensitive.
- Users who are registered in multiple groups can use all the functions available to those groups.
- □ If you specify in the address book which functions are available to global group members, those settings have priority.
- A user registered in two or more global groups can use all the functions available to members of those groups.
- □ If the "Guest" account on the Windows server is enabled, even users not registered in the domain controller can be authenticated. When this account is enabled, users are registered in the address book and can use the functions available under [*Default Group].

Specifying Windows Authentication

This can be specified by the machine administrator.

🖉 Note

- To automatically register user information such as fax numbers and e-mail addresses under Windows authentication, it is recommended that communication between the machine and domain controller be encrypted using SSL.
- Under Windows Authentication, you do not have to create a server certificate unless you want to automatically register user information such as fax numbers and e-mail addresses using SSL.

Press the [User Tools/Counter] key.

Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ОК |
|-----------------|-----|------|
| Counter | | |
| System Settings | | |
| Logout | | |

B Select [Administrator Tools] using [▲] or [▼], and then press the [OK] key.

≡System Settings 2/2 ‡OK) Interface Settings File Transfer Administrator Tools

Select [User Auth. Management] using [▲] or [▼], and then press the [OK] key.

🗏 Admin. Tools 2/6 🗘 (OK) Display/Print Counter Disp./Print User Counter User Auth. Management

5 Select [Windows Auth.] using [▲] or [▼], and then press [Details].

User Auth.Manag.: 2/3 🗘 🔿 Basic Auth. Windows Auth. Details

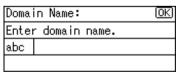

Note

□ If you do not want to use user authentication management, select [Off].

5 Select [Domain Name] using [▲] or [▼], and then press the [OK] key.

2 Enter the name of the domain controller to be authenticated, and then press the [OK] key.

B Select [Printer Job Authentication] using [▲] or [▼], and then press the [OK] key.

Select the "Printer Job Authentication" level.

🖉 Note

- If you select [Entire], you cannot print using a printer driver or a device that does not support authentication. To print in an environment that does not support authentication, select [Simple(All)] or [Simple(Limitation)].
- □ If you select [Simple(Limitation)], you can specify clients for which printer job authentication is not required. Specify [Parallel Interface(Sim.)], [USB(Sim.)] and the clients' IPv4 address range in which printer job authentication is not required. Specify this setting if you want to print using unauthenticated printer drivers or without any printer driver. Authentication is required for printing with non-specified devices.
- □ If you select **[Simple(All)]** or **[Simple(Limitation)]**, you can print even with unauthenticated printer drivers or devices. Specify this setting if you want to print with a printer driver or device that cannot be identified by the machine or if you do not require authentication for printing. However, note that because the machine does not require authentication in this case, it may be used by unauthorized users.

For details, see p.72 "Printer Job Authentication Levels and Printer Job Types".

The following procedure is based on [Entire] or [Simple(All)] being selected.

If you select [Simple(Limitation)], proceed to "Specifying Simple (Limitation)".

Belect [Entire] or [Simple(All)] using [▲] or [▼], and then press the [OK] key.

Select [Prgrm./Change/Delete Group] using [▲] or [▼], and then press the [OK] key.

| ≡Det. Seti | tings | 2/2 | \$ОК |
|------------|--------|-------|-------|
| Prgrm./Cha | ange/D | elete | Group |
| SSL | | | |

Press the [User Tools/Counter] key.

Specifying Simple (Limitation)

For authentication, you can also set **[Simple Encryption]** to **[Simple(Limitation)]**. To do this, do the following after the step 9 in "Specifying Windows Authentication", follow the procedure below.

Select [Simple(Limitation)] using [▲] or [▼], and then press [Range].

| Prnter Job Auth.: 1/2 | \$ОК) |
|-----------------------|-------|
| Entire | |
| Simple(Limitation) | |
| Range | |

Specify the range in which **[Simple(Limitation)]** is applied to Printer Job Authentication.

If you specify IPv4 address range, proceed to step **2**.

If you specify [USB(Sim.)], proceed to step 2.

If you specify [Parallel Interface(Sim.)], proceed to step 5.

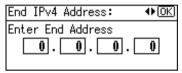

Select [IPv4 Address 1], [IPv4 Address 2], [IPv4 Address 3], [IPv4 Address 4]or [IPv4 Address 5] using (▲) or (▼), and then press the [OK] key.

Enter the Start IPv4 Address, and then press the [OK] key.

| Start IPv4 Address: | ♦ OK) |
|---------------------|-------|
| Enter Start Address | |
| | 0 |
| | |

4 Enter the End IPv4 Address, and then press the [OK] key.

Be sure the number you enter for End IPv4 Address is larger than that for Start IPv4 Address.

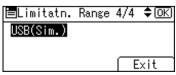

5 Select [Parallel Interface(Sim.)] using [▲] or [▼], and then press the [OK] key.

| ⊟Limitatn. | Range | 3/4 | \$ОК) |
|------------|--------|-------|-------|
| IPv4 Addre | ess5 | | |
| Parallel I | nterfa | ce(Si | m.) |
| | | E | xit |

5 Select [Inclusion] using (▲) or (▼), and then press the [OK] key.

| Parallel(Sim.): | - 1/1 | \$ОК) |
|-----------------|-------|-------|
| Exclusion | | |
| Inclusion | | |
| | | |

Select [USB(Sim.)] using [▲] or [▼], and then press the [OK] key.

Select [Inclusion] using [▲] or [▼], and then press the [OK] key.

| USB(Sim.): | 1/1 \$ ŒK |
|------------|------------------|
| Exclusion | |
| Inclusion | |
| | |

Press [Exit].

| ⊟Limitatn. | Range | 4/4 | \$ОК |
|------------|-------|-----|------|
| USB(Sim.) | | | |
| | | | |
| | | E | xit |

Press the [OK] key.

| Prnter Job Auth.: 1/2 | \$ОК) |

| Entire | |
| Simple(Limitation) | |
| Range | |
| | |

Specifying [Simple(Limitation)] is now complete.

Press the [OK] key.

$\ddot{\mathbb{V}}$ Installing Internet Information Services (IIS) and Certificate services

.

Specify this setting if you want the machine to automatically obtain e-mail addresses registered in Active Directory.

We recommended you install Internet Information Services (IIS) and Certificate services as the Windows components.

Install the components, and then create the server certificate.

If they are not installed, install them as follows:

- ① Select [Add/Remove Programs] on the [Control Panel].
- ② Select [Add/Remove Windows Components].
- ③ Select the [Internet Information Services (IIS)] check box.
- ④ Select the [Certificate Services] check box, and then click [Next].
- ⑤ Installation of the selected Windows components starts, and a warning message appears.
- 6 Click [Yes].
- ⑦ Click [Next].
- ③ Select the Certificate Authority, and then click [Next]. On the displayed screen, [Enterprise root CA] is selected.
- Enter the Certificate Authority name (optional) in [CA Identifying Information], and then click [Next].
- Leave [Data Storage Location] at its default, and then click [Next]. Internet Information Services and Certificate services are installed.

Creating the Server Certificate

.

After installing Internet Information Services (IIS) and Certificate services Windows components, create the Server Certificate as follows:

- ① Start [Internet Services Manager].
- ② Right-click [Default Web Site], and then click [Properties].
- ③ On the [Directory Security] tab, click [Server Certificate]. Web Server Certificate Wizard starts.
- ④ Click [Next].
- (5) Select [Create a new certificate], and then click [Next].
- 6 Select [Prepare the request now, but send it later], and then click [Next].
- ⑦ Enter the required information according to the instructions given by Web Server Certificate Wizard.
- (a) Check the specified data, which appears as Request File Summary, and then click [Next]. The server certificate is created.

$\widehat{\mathbb{Q}}$ If the fax number cannot be obtained

If the fax number cannot be obtained during authentication, specify the setting as follows:

- Start [C:\WINNT\SYSTEM32\adminpak]. Start Setup Wizard.
- 2 Select [Install all of the Administrator Tools], and then click [Next].
- ③ On the [Start] menu, select [Run].
- ④ Enter [mmc], and then click [OK].
- (5) On the [Console], select [Add/Remove Snap-in].
- 6 Click [Add].
- ⑦ Select [ActiveDirectory Schema], and then click [Add].
- 8 Select [facsimile Telephone Number].
- Right-click, and then click [Properties].
- [®] Select [Replicate this attribute], and then click [Apply].

LDAP Authentication

Specify this authentication when using the LDAP server to authenticate users who have their accounts on the LDAP server. Users cannot be authenticated if they do not have their accounts on the LDAP server. The address book stored in the LDAP server can be registered to the machine, enabling user authentication without first using the machine to register individual settings in the address book. When using LDAP Authentication, to prevent the password information being sent over the network unencrypted, the machine and LDAP server must communicate via SSL. To enable this, you must create a server certificate for the LDAP server. You can specify on the LDAP server whether or not to enable SSL.

Using Web Image Monitor, you can specify whether or not to check the reliability of the SSL server being connected to.

∰Important

During LDAP Authentication, the data registered in the LDAP server, such as the user's e-mail address, is automatically registered in the machine. If user information on the server is changed, information registered in the machine may be overwritten when authentication is performed.

Operational Requirements for LDAP Authentication

To specify LDAP authentication, the following requirements must be met:

- The Printer/Scanner unit must be installed.
- The network configuration must allow the machine to detect the presence of the LDAP server.
- When SSL is being used, TLSv1, SSLv2, or SSLv3 can function on the LDAP server.
- The LDAP server must be registered in the machine. For details about registration, see General Settings Guide.
- When registering the LDAP server, the following settings must be specified.
 - Server Name
 - Search Base
 - Port No.
 - SSL Communication
 - Authentication
 - Search Conditions (Name, E-mail Address, Fax Number) When specifying "SSL Communication", **[On]** must be specified. When specifying "Authentication", **[On]** or **[High Security]**must be specified. For details about registration, see General Settings Guide.

Limitation

- Under LDAP authentication, you cannot specify access limits for groups registered in the LDAP Server.
- When using LDAP Authentication, you cannot use reference functions in LDAP Search for servers using SSL.
- Enter the user's login user name using up to 32 characters and login password using up to 128 characters.
- Do not use double-byte Japanese, Traditional Chinese, Simplified Chinese, or Korean characters when entering the login user name or password. If you use double-byte characters, you cannot authenticate using Web Image Monitor.

🖉 Note

- Under LDAP Authentication, if "Anonymous Authentication" in the LDAP server's settings is not set to "Prohibit", users who do not have an LDAP server account might still be able to gain access.
- If the LDAP server is configured using Windows Active Directory, Anonymous Authentication might be available. If Windows Authentication is available, we recommend you use it.
- □ The first time an unregistered user accesses the machine after LDAP authentication has been specified, the user is registered in the machine and can use the functions available under [Permit Functions on Auth.] during LDAP Authentication. To limit the available functions for each user, register each user and corresponding [Permit Functions on Auth.] setting in the address book, or specify [Permit Functions on Auth.] for each registered user. The [Permit Functions on Auth.] setting becomes effective when the user accesses the machine subsequently.

Specifying LDAP Authentication

This can be specified by the machine administrator.

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$OK |
|-----------------|-----|------|
| Counter | | |
| System Settings | | |
| Logout | | |

B Select [Administrator Tools] using [▲] or [▼], and then press the [OK] key.

≡System Settings 2/2 ‡OK Interface Settings File Transfer Administrator Tools

Select [User Auth. Management] using [▲] or [▼], and then press the [OK] key.

⊟Admin. Tools 2/6 ≑OK) Display/Print Counter Disp./Print User Counter User Auth. Management

5 Select [LDAP Auth.] using [▲] or [▼], and then press [Details].

```

LDAP Auth.
Integration Svr. Auth.
Details
```

🖉 Note

□ If you do not want to use user authentication management, select [Off].

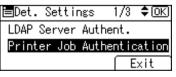

5 Select [LDAP Server Authent.] using [▲] or [▼], and then press the [OK] key.

EDet. Settings 1/3 ◆OK LDAP Server Authent. Printer Job Authentication Exit

Select the LDAP server to be used for LDAP authentication using [▲] or [▼], and then press the [OK] key.

LDAP Authent.: 1/2 ¢OK 1:Server 1 2:Server 2 3:Server 3

Select [Printer Job Authentication] using [▲] or [▼], and then press the [OK] key.

Select the "Printer Job Authentication" level.

🖉 Note

- If you select [Entire], you cannot print using a printer driver or a device that does not support authentication. To print in an environment that does not support authentication, select [Simple(All)] or [Simple(Limitation)].
- □ If you select [Simple(Limitation)], you can specify clients for which printer job authentication is not required. Specify [Parallel Interface(Sim.)], [USB(Sim.)] and the clients' IPv4 address range in which printer job authentication is not required. Specify this setting if you want to print using unauthenticated printer drivers or without any printer driver. Authentication is required for printing with non-specified devices.
- □ If you select **[Simple(All)]** or **[Simple(Limitation)]**, you can even print with unauthenticated printer drivers or devices. Specify this setting if you want to print with a printer driver or device that cannot be identified by the machine or if you do not require authentication for printing. However, note that because the machine does not require authentication in this case, it may be used by unauthorized users.

For details, see p.72 "Printer Job Authentication Levels and Printer Job Types".

The following procedure is based on **[Entire]** or **[Simple(All)]** being selected. If you select **[Simple(Limitation)]**, proceed to "Specifying Simple(Limitation)".

Press the [OK] key.

```
Prnter Job Auth.: 1/2 $OK
Entire
Simple(Limitation)
Range
```

I Select [Login Name Attribute] using [\blacktriangle] or [\checkmark], and then press the [OK] key.

| ⊟Det. Settings | 2/3 | \$ОК) |
|------------------|-------|-------|
| Login Name Attr | ibute | |
| Unique Attribute | Э | |
| | E | xit |

| Logir | n Name | Attribute: | OK) |
|-------|---------|------------|-----|
| Enter | r attri | ibute. | |
| abc | | | |
| | | | |

🖉 Note

You can use the Login Name Attribute as a search criterion to obtain information about an authenticated user. You can create a search filter based on the Login Name Attribute, select a user, and then retrieve the user information from the LDAP server so it is transferred to the machine's address book. The method for selecting the user name depends on the server environment. Check the server environment and enter the user name accordingly.

B Select [Unique Attribute] using [▲] or [▼], and then press the [OK] key.

Enter the unique attribute, and then press the [OK] key.

| Uniqu | ue Attribute: | (OK) |
|-------|---------------|------|
| Entei | r attribute. | |
| abc | _ | |
| | | |

🖉 Note

□ Specify Unique Attribute on the machine to match the user information in the LDAP server with that in the machine. By doing this, if the Unique Attribute of a user registered in the LDAP server matches that of a user registered in the machine, the two instances are treated as referring to the same user. You can enter an attribute such as "serialNumber" or "uid". Additionally, you can enter "cn" or "employeeNumber", provided it is unique. If you do not specify the Unique Attribute, an account with the same user information but with a different login user name will be created in the machine.

E Select [Permit Functions on Auth.] using [▲] or [▼], and then press the [OK] key.

☑ Select which of the machine's functions you want to permit using [▲] or [▼], and then press the [▶] key.

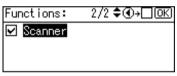

| Functions: | 1/2 \$€, |
|------------|----------|
| 🗹 Copier | |
| 🗹 Printer | |
| 🗹 Fax | |

The box next to a selected item is checked. To deselect the item, press [4].

LDAP Authentication will be applied to the selected functions. Users can use the selected functions only.

For details about function permissions, see p.98 "Limiting Available Functions".

Press the [OK] key.

🛙 Press [Exit].

| ⊟Det. Settings | 3/3 🗘 OK |
|------------------|----------|

Specifying [Simple(Limitation)] is now complete.

Press the [OK] key.

Integration Server Authentication

To use Integration Server Authentication, you need a server on which the Scan-Router delivery software that supports authentication is installed.

For external authentication, the Integration Server Authentication collectively authenticates users accessing the server over the network, providing a server-independent centralized user authentication system that is safe and convenient.

To use **[Integration Svr. Auth.]**, the machine must have access to a server on which ScanRouter System or Web SmartDeviceMonitor Professional IS/Standard and Authentication Manager are installed.

For details about the software, contact your local dealer.

To use Integration Server Authentication, which depends on communication via the secure sockets layer (SSL), the Printer / Scanner unit must be installed.

Using Web Image Monitor, you can specify whether or not to check the reliability of the SSL server being connected to.

#Important

During Integration Server Authentication, the data registered in the server, such as the user's e-mail address, is automatically registered in the machine. If user information on the server is changed, information registered in the machine may be overwritten when authentication is performed.

🖉 Note

The built-in default administrator name is "Admin" on the Server and "admin" on the machine.

Specifying Integration Server Authentication

This can be specified by the machine administrator.

This section explains how to specify the machine settings.

For details, see the Authentication Manager manual.

Press the [User Tools/Counter] key.

Select [Printer Job Authentication] using [▲] or [▼], and then press the [OK] key.

| ⊟Det. Settings | 3/4 | \$OK |
|------------------|--------|-------|
| Prgrm./Change/De | elete | Group |
| Printer Job Auth | hentic | ation |
| | Ē | xit |

Delect the "Printer Job Authentication" level.

🖉 Note

- □ If you select **[Entire]**, you cannot print using a printer driver or a device that does not support authentication. To print under in environment that does not support authentication, select **[Simple(All)]** or **[Simple(Limitation)]**.
- □ If you select [Simple(Limitation)], you can specify clients for which printer job authentication is not required. Specify [Parallel Interface(Sim.)], [USB(Sim.)] and the clients' IPv4 address range in which printer job authentication is not required. Specify this setting if you want to print using unauthenticated printer drivers or without any printer driver. Authentication is required for printing with non-specified devices.
- □ If you select **[Simple(All)]** or **[Simple(Limitation)]**, you can even print with unauthenticated printer drivers or devices. Specify this setting if you want to print with a printer driver or device that cannot be identified by the machine or if you do not require authentication for printing. However, note that because the machine does not require authentication in this case, it may be used by unauthorized users.

For details, see p.72 "Printer Job Authentication Levels and Printer Job Types".

The following procedure is based on [Entire] or [Simple(All)] being selected.

If you select [Simple(Limitation)], proceed to "Specifying Simple (Limitation)".

I Select [Entire] or [Simple(All)] using [▲] or [▼], and then press the [OK] key.

| Prnter Job Auth.: 1/2 | \$ОК |
|-----------------------|------|
| Entire | |
| Simple(Limitation) | |
| Range | |

Belect [SSL] using [▲] or [▼], and then press the [OK] key.

| ⊟Det. | Settings | 2/2 | \$ОК) |
|--------|-----------|-------|-------|
| Prgrm. | /Change/D | elete | Group |
| SSL | | | |
| | | ÍE | xit] |

B Select [On] using [▲] or [▼], and then press the [OK] key.

| SSL: | 1/1 | \$0K) |
|------|-----|-------|
| On | | |
| Off | | |
| | | |

To not use secure sockets layer (SSL) for authentication, press [Off].

Press [Exit].

■Det. Settings 2/2 ◆OK) Prgrm./Change/Delete Group SSL Exit

Press the [OK] key.

| User Auth.Manag.: 3/3 🗘 🔿 |
|---------------------------|
| LDAP Auth. |
| Integration Svr. Auth. |
| Details |

Specifying Simple (Limitation)

For authentication, you can also set Simple Encryption to [Simple(Limitation)].

To do that, do the following after the step 14 in "Specifying Integration Server Authentication"

Select [Simple(Limitation)] using [▲] or [▼], and then press [Range].

| Prnter Job Auth.: 1/2 | \$ОК |
|-----------------------|------|
| Entire | |
| Simple(Limitation) | |
| Range | |
| | |

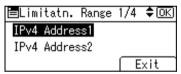

Specify the range in which **[Simple(Limitation)]** is applied to Printer Job Authentication.

If you specify IPv4 address range, proceed to step **2**.

If you specify [USB(Sim.)], proceed to step 2.

If you specify [Parallel Interface(Sim.)], proceed to step 5.

Select [IPv4 Address 1], [IPv4 Address 2], [IPv4 Address 3], [IPv4 Address 4]or [IPv4 Address 5] using (▲) or (▼), and then press the [OK] key.

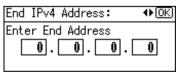

B Enter the Start IPv4 Address, and then press the **[OK]** key.

| Start | IPv4 | Addre | ss: | ♦ OK) |
|-------|------|--------|-----|-------|
| Enter | Star | : Addr | ess | |
| | 1. | 0. | 0. | 0 |
| | | | | |

4 Enter the End IPv4 Address, and then press the [OK] key.

Be sure the number you enter for End IPv4 Address is larger than that for Start IPv4 Address.

5 Select [Parallel Interface(Sim.)] using [▲] or [▼], and then press the [OK] key.

| ≡Limitatn. | Range | 3/4 | \$ОК) |
|------------|--------|-------|-------|
| IPv4 Addre | ss5 | | |
| Parallel I | nterfa | ce(Si | m.) |
| | | E | xit |

5 Select [Inclusion] using [▲] or [▼], and then press the [OK] key.

| Parallel(Sim.): | 1/1 | \$ОК) |
|-----------------|-----|-------|
| Exclusion | | |
| Inclusion | | |
| | | |

2 Select [USB(Sim.)] using [▲] or [▼], and then press the [OK] key.

| USB(Sim.) | ≡Limitatn. | Range | 4/4 | \$ОК) |
|-----------|------------|-------|-----|-------|
| | USB(Sim.) | | | |
| | | | | |
| Exit | | | E | xit |

Select [Inclusion] using [▲] or [▼], and then press the [OK] key.

| USB(Sim.): | 1/1 | \$ОК) |
|------------|-----|-------|
| Exclusion | | |
| Inclusion | | |
| | | |

9 Press [Exit].

| ⊟Limitatn. | Range | 4/4 | \$ОК) |
|------------|-------|-----|-------|
| USB(Sim.) | | | |
| | | | |
| | | E | xit |

Press the [OK] key.

| Prnter Job Auth.: 1/2 | \$ОК) | | | |
|-----------------------|-------|--|--|--|
| Entire | | | | |
| Simple(Limitation) | | | | |
| Range | | | | |

Specifying [Simple(Limitation)] is now complete.

Press the [OK] key.

Printer Job Authentication Levels and Printer Job Types

This section explains the relationship between printer job authentication levels and printer job types.

Depending on the combination of printer job authentication level and printer job type, the machine may not print properly. Set an appropriate combination according to the operating environment.

User authentication is supported by the RPCS and PCL printer driver.

| Machine Settings (dis | splayed on the co | ntrol panel) | Pri | nter | Job 7 | Гуре | s | | |
|--|-----------------------------------|--------------------------|-----|------|-------|------|---|---|---|
| [User Auth. Manage- ment] | [Printer Job Au- thentication] | [Simple Encryp- tion] | 1 | 2 | 3 | 4 | 5 | 6 | 0 |
| [Off] | | — | ☆ | ☆ | ☆ | ☆ | ☆ | ☆ | ☆ |
| [User Code Auth.],[Ba- | [Simple(All)] | [Off] | • | О | × | ☆ | ☆ | ☆ | 0 |
| sic Auth.], [Windows Auth.],[LDAP Authenti- | | [On] | 1 | × | 1 | | | | |
| | [Entire] | [Off] | • | О | × | О | × | × | 0 |
| | | [On] | 1 | × | 1 | | | | |

☆: Printing is possible regardless of user authentication.

O: Printing is possible if user authentication is successful. If user authentication fails, the print job is reset.

•: Printing is possible if user authentication is successful and [Driver Encryption Key] for the printer driver and machine match.

×: Printing is not possible regardless of user authentication, and the print job is reset.

PReference

For details about **[Simple Encryption]**, see p.127 "Changing the Extended Security Functions".

[Printer Job Authentication]

• [Entire]

The machine authenticates all printer jobs and remote settings, and cancels jobs and settings that fail authentication. Printer Jobs: Job Reset

Settings: Disabled

• [Simple(All)]

The machine authenticates printer jobs and remote settings that have authentication information, and cancels the jobs and settings that fail authentication.

Printer jobs and settings without authentication information are performed without being authenticated.

• [Simple(Limitation)].

You can specify the range to apply [Simple(Limitation)] to by specifying [Parallel Interface(Sim.)], [USB(Sim.)], and the client's IPv4 address.

Printer Job Types

- In the RPCS printer driver dialog box, the [Confirm authentication information when printing] and [Encrypt] check boxes are selected. In the PCL printer driver dialog box, the [User Authentication] and [With Encryption] check boxes are selected. Personal authentication information is added to the printer job. The printer driver applies advanced encryption to the login passwords. The printer driver encryption key, enables the driver encryption to prevent the login password being stolen.
 In the RPCS printer driver dialog box, the [Confirm authentication information]
- In the RPCS printer driver dialog box, the [Confirm authentication information when printing] check box is selected.
 In the PCL printer driver dialog box, the [User Authentication] and [With Encryption] check boxes are selected.
 Personal authentication information is added to the printer job.

The printer driver applies simple encryption to login passwords.

③ In the RPCS printer driver dialog box, the **[Confirm authentication information** when printing] check box is not selected.

In the PCL printer driver dialog box, the **[User Authentication]** check box is not selected.

Personal authentication information is added to the printer job and is disabled on the machine.

④ When using the PostScript 3 printer driver, the printer job contains user code information.

Personal authentication information is not added to the printer job but the user code information is.

🖉 Note

- This type also applies to recovery/parallel printing using an RPCS/PCL printer driver that does not support authentication.
- ③ When using the PostScript 3 printer driver, the printer job does not contain user code information.

Neither personal authentication information nor user code information is added to the printer job.

🖉 Note

- □ Type 5 also applies to recovery/parallel printing using an RPCS/PCL printer driver that does not support authentication.
- A printer job or PDF file is sent from a host computer without a printer driver and is printed via LPR.

Personal authentication information is not added to the printer job.

⑦ A PDF file is printed via ftp.

Personal authentication is performed using the user ID and password used for logging on via ftp. However, the user ID and password are not encrypted.

If User Authentication Has Been Specified

When user authentication (User Code Authentication, Basic Authentication, Windows Authentication, LDAP Authentication, or Integration Server Authentication) is set, the authentication screen is displayed. Unless a valid user name and password are entered, operations are not possible with the machine. Log on to operate the machine, and log off when you are finished operations. Be sure to log off to prevent unauthorized users from using the machine. When auto logout timer is specified, the machine automatically logs you off if you do not use the control panel within a given time. Additionally, you can authenticate using an external device.

🖉 Note

- Consult the User Administrator about your login user name, password, and user code.
- □ For user code authentication, enter a number registered in the address book as **[User Code]**.

User Code Authentication (Using the Control Panel)

When user authentication is set, the following screen appears.

| To use the following, | | | | |
|-----------------------|----------------------|--|--|--|
| enter | r user code-≻OK key. | | | |
| | | | | |
| Сорі | er | | | |

Enter a user code (up to eight digit), and then press the **[OK]** key.

🖉 Note

□ To log off, do one of the following:

- Press the Operation switch.
- Press the [User Tools/Counter] key, select [System Settings], press the [OK] key, and then press the [User Tools/Counter] key again.

User Code Authentication (Using a Printer Driver)

When user authentication is set, specify the user code in the printer properties of a printer driver. For details, see the printer driver Help.

Login (Using the Control Panel)

Follow the procedure below to log on when basic authentication, Windows authentication, LDAP Authentication, or Integration Server Authentication is set.

Enter a login user name, and then press the [OK] key.

| Logir | 1: | | | | (OK) |
|-------|-----|-------|------|-------|------|
| Enter | r a | login | user | name. | |
| abc | 1 | | | | |
| | | | | | |

2 Enter a login password, and then press the **[OK]** key.

| Logir | 1: | OK) |
|-------|-------------------|-----|
| Enter | r login password. | |
| abc | _ | |
| | | |

When the user is authenticated, the screen for the function you are using appears.

Log Off (Using the Control Panel)

Follow the procedure below to log off when Basic Authentication, Windows Authentication, or LDAP Authentication is set.

Press the [User Tools/Counter] key.

2 Press [Logout].

| ≡User Tools | 1/4 | \$ОК) |
|-----------------|-----|-------|
| Counter | | |
| System Settings | | |
| Logout | | |

B Press [Yes].

| Are you su | re | |
|------------|----|-----|
| you want t | 0 | |
| log out? | | |
| | No | Yes |

Login (Using a Printer Driver)

When Basic Authentication, Windows Authentication, or LDAP Authentication is set, make encryption settings in the printer properties of a printer driver, and then specify a login user name and password. For details, see the printer driver Help.

🖉 Note

□ When logged on using a printer driver, logging off is not required.

Login (Using Web Image Monitor)

This section explains how to log onto the machine via Web Image Monitor.

Click [Login].

2 Enter a login user name and password, and then click [Login].

🖉 Note

- □ For user code authentication, enter a user code in **[User Name]**, and then click **[OK]**.
- □ The procedure may differ depending on the Web Image Monitor used.

Log Off (Using Web Image Monitor)

Click [Logout] to log off.

🖉 Note

Delete the cache memory in the Web Image Monitor after logging off.

Auto Logout

This can be specified by the machine administrator.

When using user authentication management, the machine automatically logs you off if you do not use the control panel within a given time. This feature is called "Auto Logout". Specify how long the machine is to wait before performing Auto Logout.

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

B Select [Timer Settings] using [▲] or [▼], and then press the [OK] key.

⊟System Settings 1/2 ¢OK General Features Tray Paper Settings Timer Settings

Select [Auto Logout Timer] using [▲] or [▼], and then press the [OK] key.

⊟Timer Settings 4/4 ‡OK)

Auto Logout Timer

5 Select [On] using [▲] or [▼], and then press the [OK] key.

| Auto | Logout | Timer:1/1 | \$ОК) |
|------|--------|-----------|-------|
| On | | | |
| Off | | | |
| | | | |

5 Enter "60" to "999" (seconds) using the number keys, and then press the **[OK]** key.

🖉 Note

□ If you do not want to specify [Auto Logout Timer], select [Off].

2 Press the [User Tools/Counter] key.

Authentication using an external device

If you authenticate using an external device, see the attached manual to the external device about operation method of authentication. For details, contact your local dealer.

3. Ensuring Information Security

Preventing Unauthorized Copying

Using the printer driver, you can embed a pattern in the printed copy to discourage or prevent unauthorized copying.

If you enable data security for copying on the machine, printed copies of a document with data security for copying are grayed out to prevent unauthorized copying.

Make the setting as follows:

Unauthorized Copy Prevention

① Using the printer driver, specify the printer settings for unauthorized copy prevention.

See p.83 "Specifying Printer Settings for Unauthorized Copy Prevention (Printer Driver Setting)".

Data Security for Copying

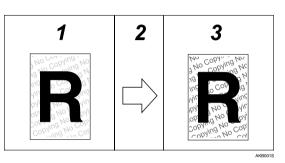

① Using the printer driver, specify the printer settings for data security for copying.

See p.84 "Specifying Printer Settings for Data security for copying (Printer Driver Setting)".

Unauthorized Copy Prevention

Using the printer driver, you can embed mask and pattern (for instance, a warning such as "No Copying") in the printed document.

If the document is copied, scanned, or stored by a copier or multi function printer, the embedded pattern appears clearly on the copy, discouraging unauthorized copying.

1. Printed Documents

Using the printer driver, you can embed background images and pattern in a printed document for Unauthorized Copy Prevention.

2. The document is copied, scanned, or stored.

You cannot store files in this machine.

∰Important

- Unauthorized copy prevention discourages unauthorized copying, and will not necessarily stop information leaks.
- □ The embedded pattern cannot guarantee to be copied or scanned properly.

Limitation

- □ You cannot store files in this machine.
- Depending on the machine and scanner settings, the embedded pattern may not be copied or scanned.

🖉 Note

□ To make the embedded pattern clear, set the character size to at least 50 pt (preferably 70 to 80 pt) and character angle to between 30 and 40 degrees.

Reference

To use the printer function under the User Authentication, you must enter the login user name and password for the printer driver.

For details see the printer driver Help.

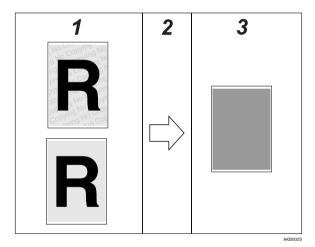

3. Printed Copies

Embedded pattern (for instance, a warning such as "No Copying") in a printed document appears conspicuously in printed copies.

Data Security for Copying

Using the printer driver to enable data security for the copying function, you can print a document with an embedded pattern of hidden text. Such a document is called a data security for copying document.

If a data security for copying document is copied or stored using a copier or multi-function printer that has the Copy Data Security Unit, protected pages are grayed out in the copy, preventing confidential information being copied. Also if a document that has an embedded pattern is detected, the machine beeps. In addition, a log of unauthorized copies is stored. To gray out copies of data security for copying documents when they are copied or stored in the Document Server, the optional Copy Data Security Unit must be installed in the machine.

1. Documents with data security for copying

2. The document is copied or stored.

You cannot store files in this machine.

3. Printed Copies

Text and images in the document are grayed out in printed copies.

Limitation

- You cannot store files in this machine.
- □ The optional Copy Data Security Unit is not available for this machine.
- If a document with embedded pattern for data security for copying is copied, or stored by a copier or multi-function printer without Copy Data Security Unit, the embedded pattern appears conspicuously in the copy. However, how conspicuously the text appears depends on the model of the copier or multi-function printer being used and its scanning setting.

🖉 Note

- You can also embed a pattern in a document protected by data security for copying. However, if such a document is copied or stored using a copier or multi-function printer with the Copy Data Security Unit, the copy is grayed out, so the embedded pattern does not appear on the copy.
- □ If misdetection occurs, contact your service representative.
- If a document with embedded pattern for data security for copying is copied, or stored in the Document Server by a copier or multi-function printer without Copy Data Security Unit, the embedded pattern appears conspicuously in the copy. However, character relief may differ depending on the copier or multifunction printer model in use or document scan setting.

Printing Limitations

The following is a list of limitations on printing with unauthorized copy prevention and data security for copying.

Unauthorized copy prevention / Data security for copying

Limitation

- □ You can print using the only RPCS printer driver.
- □ You cannot print at 200 dpi resolution.
- □ You cannot partially embed a pattern in the printed document.
- □ You can only embed a pattern that is entered in the **[Text]** box of the printer driver.
- □ Printing with embedding takes longer than normal printing.

Data security for copying Only

Limitation

- \Box Select 182 × 257 mm / 7.2 × 10.1 inches or larger as the paper size.
- □ Select Plain or Recycled with a brightness of 70% or more as the paper type.
- If you select Duplex, the data security for copying function may not work properly due to printing on the back of sheets.

Notice

1. The supplier does not guarantee that unauthorized copy prevention and data security for copying will always work. Depending on the paper, the model of copier or multi-function printer, and the copier or printer settings, unauthorized copy prevention and data security for copying may not work properly.

2. The supplier is not liable for any damage caused by using or not being able to use unauthorized copy prevention and data security for copying.

Printing with Unauthorized Copy Prevention and Data Security for Copying

Specifying Printer Settings for Unauthorized Copy Prevention (Printer Driver Setting)

Using the printer driver, specify the printer settings for unauthorized copy prevention.

To use the printer function under the User Authentication, you must enter the login user name and password for the printer driver.

For details see the printer driver Help.

For details about specifying data security for copying using the printer driver, see the printer driver Help.

1 Open the printer driver dialog box.

2 On the [Edit] tab, select the [Unauthorized copy...] check box.

Click [Control Settings...].

4 In the [Text] box in the [Unauthorized copy prevention: Pattern] group, enter the text to be embedded in the printed document.

Also, specify [Font:], [Font style:], and [Size:].

5 Click **[OK]**.

Reference

For details, see the printer driver Help.

Specifying Printer Settings for Data security for copying (Printer Driver Setting)

If a document printed using this function is copied or stored in the Document Server by a copier or multi-function printer, the copy is grayed out.

Using the printer driver, specify the printer settings for data security for copying.

For details about data security for copying, see p.81 "Data Security for Copying".

To use the printer function under the User Authentication, you must enter the login user name and password for the printer driver.

For details see the printer driver Help.

For details about specifying data security for copying using the printer driver, see the printer driver Help.

1 Open the printer driver dialog box.

2 On the [Edit] tab, select the [Unauthorized copy...] check box.

- Click [Control Settings...].
- 4 In the [Unauthorized copy prevention: Pattern] group, check the [Data security for copying:].
- **5** Click **[OK]**.
 - PReference

For details, see the printer driver Help.

Preventing Data Leaks Due to Unauthorized Transmission

If user authentication is specified, the user who has logged on will be designated as the sender to prevent data from being sent by an unauthorized person masquerading as the user.

You can also limit the direct entry of destinations to prevent files from being sent to destinations not registered in the address book.

Restrictions on Destinations

This can be specified by the user administrator.

Make the setting to disable the direct entry of e-mail addresses and phone numbers under the scanner and fax functions.

By making this setting, the destinations can be restricted to addresses registered in the address book.

If you set **[Restrict Use of Dest.]** to **[On]**, you can prohibit users from directly entering telephone numbers, e-mail addresses, or Folder Path in order to send files. If you set **[Restrict Use of Dest.]** to **[Off]**, **[Restrict Adding User Dest.]** appears. In **[Restrict Adding User Dest.]**, you can restrict users from registering data in the address book.

If you set **[Restrict Adding User Dest.]** to **[Off]**, users can directly enter destination telephone numbers, e-mail addresses, and Folder Path in **[Add Dest]** on the fax and scanner screens. If you set **[Restrict Adding User Dest.]** to **[On]**, users can specify destinations directly, but cannot use **[Add Dest]** to register data in the address book. When this setting is made, only the user administrator can change the address book.

For details, see p.127 "Changing the Extended Security Functions".

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ОК) |

Protecting the Address Book

If user authentication is specified, the user who has logged on will be designated as the sender to prevent data from being sent by an unauthorized person masquerading as the user.

To protect the data from unauthorized reading, you can also encrypt the data in the address book.

Address Book Access Permission

This can be specified by the registered user. The access permission can also be specified by a user granted full control or the user administrator.

You can specify who is allowed to access the data in the address book.

By making this setting, you can prevent the data in the address book being used by unregistered users.

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

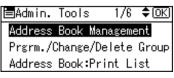

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

Select [Dest.Protect:Permissions] using [▲] or [▼], and then press the [OK] key.

Press [Program].

D Select the users or groups to register.

Prog. User/Group Perms. ()) Enter Prog. Number. Quick Dial:001-032 Search All

You can select more than one user.

By pressing [All], you can select all the users.

B Press the [OK] key.

Prog. User/Group Perms. OK)

001London Office

Select the permission, and then press the [OK] key.

Access Privilege: 1/2 ¢OK) Read-only Edit Edit/Delete

Select the permission, from [Read-only], [Edit], [Edit/Delete], or [Full Control].

Encrypting the Data in the Address Book

This can be specified by the user administrator.

Encrypt the data in the address book.

To encrypt the Data in the Address Book, the Printer/Scanner unit must be installed.

See p.127 "Changing the Extended Security Functions".

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

🖉 Note

If you register additional users after encrypting the data in the address book, those users are also encrypted.

Press the [User Tools/Counter] key.

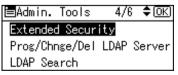

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ОК) |
|-----------------|-----|-------|
| Counter | | |
| System Settings | | |
| Logout | | |

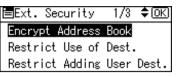

B Select [Administrator Tools] using [▲] or [▼], and then press the [OK] key.

```
⊟System Settings 2/2 ¢OK)
Interface Settings
File Transfer
Administrator Tools
```

Select [Extended Security] using [▲] or [▼], and then press the [OK] key.

5 Select [Encrypt Address Book] using [▲] or [▼], and then press the [OK] key.

6 Select [On] using [▲] or [▼], and then press [Enc.Key].

| Encrypt | Add.Book: | 1/1 | \$ОК) |
|---------|-----------|-----|-------|
| On | | | |
| Off | | | |
| Enc.Key | -) - | | |

2 Enter the encryption key, and then press the **[OK]** key.

Encryption Key: (OK) Enter Encryption Key: abc

Enter the encryption key using up to 32 alphanumeric characters.

B Re-enter the encryption key, and then press the [OK] key.

| Conf | irm Encryption Key: | OK) |
|-------|----------------------|-----|
| Re-er | nter Encryption key. | |
| abc | | |
| | | |

Press the [OK] key.

| Encrypt | Add.Book: | 1/1 | \$ 0К) |
|---------|-----------|-----|---------------|
| On | | | |
| Off | | | |
| Enc.Key | <u>م</u> | | |

D Press [OK].

Encryption/Decryption will start. This may take some time. Cancel OK

Do not switch the main power off during encryption, as doing so may corrupt the data.

Encrypting the data in the address book may take a long time.

The time it takes to encrypt the data in the address book depends on the number of registered users.

The machine cannot be used during encryption.

Normally, once encryption is complete, [Exit] appears.

If you press [Stop] during encryption, the data is not encrypted.

If you press [Stop] during decryption, the data stays encrypted.

Dress [Exit].

4. Managing Access to the Machine

Preventing Modification of Machine Settings

Administrator type determines which machine settings can be modified. Users cannot change the administrator settings. In [Admin. Auth. Management], [Items], the administrator can select which settings users cannot specify.

Register the administrators before using the machine.

* Type of Administrator

Register the administrator on the machine, and then authenticate the administrator using the administrator's login user name and password. The administrator can also specify **[Items]** in **[Admin. Auth. Management]** to prevent users from specifying certain settings. Administrator type determines which machine settings can be modified. The following types of administrators can be designated:

- User Administrator
- Network Administrator
- Machine Administrator
- File Administrator

PReference

For details, see p.11 "Administrators".

For details, see p.17 "Administrator Authentication".

For details, see p.162 "User Administrator Settings".

For details, see p.148 "Machine Administrator Settings".

For details, see p.156 "Network Administrator Settings".

For details, see p.161 "File Administrator Settings".

Menu Protect

Use this function to specify the permission level for users to change those settings accessible by non-administrators.

You can specify Menu Protect for the following settings:

- Copier Features
- Fax Features
- Printer Features
- Scanner Features

For details, see p.167 "User Settings".

Menu Protect

The administrator can also limit users' access permission to the machine's settings. The machine's System Settings menu and the printer's regular menus can be locked so they cannot be changed. This function is also effective when management is not based on user authentication.

To change the menu protect setting, you must first enable administrator authentication.

PReference

For details about the menu protect level for each function, see p.167 "User Settings".

Menu Protect

You can set menu protect to **[Off]**, **[Level 1]**, or **[Level 2]**. If you set it to **[Off]**, no menu protect limitation is applied. To limit access to the fullest extent, select **[Level 2]**. For details about the menu protect level for each function, see p.167 "User Settings".

Copying Functions

Set [Machine Management] to [On] in [Admin. Auth. Management] in [Administrator Tools] in [System Settings] before specifying [Menu Protect] in [Copier Features].

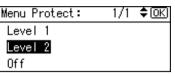

Press the [User Tools/Counter] key.

2 Select [Copier Features] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 2/4 | \$OK |

Managing Log Files

Log information

To view the log, Web SmartDeviceMonitor Professional IS/Standard is required.

The following log information is stored in the machine's memory:

Job log

Stores information about workflow related to user files, such as copying, printing, Fax delivery, and scan file delivery

- Access log Stores information about access, such as logging on and off.
- ② Transferring log information

To transfer the log, Web SmartDeviceMonitor Professional IS/Standard is required.

You can transfer the log information, which indicates who tried to gain access and at what time.

By transferring the log files, you can check the history data and identify unauthorized access.

Transfer Log Setting

The machine administrator can select **[On]** from Web SmartDeviceMonitor Professional IS/Standard only.

When using the machine's control panel, you can change the setting to **[Off]** only if it is set to **[On]**.

You can check and change the transfer log setting. This setting lets you transfer log files to Web SmartDeviceMonitor Professional IS/Standard to check the history data and identify unauthorized access.

For details about Web SmartDeviceMonitor Professional IS/Standard, contact your local dealer.

For details about the transfer log setting, see Web SmartDeviceMonitor Professional IS/Standard help.

Press the [User Tools/Counter]key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

Transfer Log: 1/1 **≑**0K) On **Off**

6 Press the **[User Tools/Counter]**key.

5. Enhanced Network Security

Preventing Unauthorized Access

You can limit IP addresses, disable ports and protocols, or use Web Image Monitor to specify the network security level to prevent unauthorized access over the network and protect the address book, stored files, and default settings.

Enabling/Disabling Protocols

This can be specified by the network administrator.

Specify whether to enable or disable the function for each protocol.

By making this setting, you can specify which protocols are available and so prevent unauthorized access over the network.

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ОК) |
|-----------------|-----|-------|
| Counter | | |

| Inactive | | |
| | | |

B Press the [User Tools/Counter] key.

\mathcal{P} Reference

Advanced network settings can be specified using Web Image Monitor. For details, see the Web Image Monitor Help.

Access Control

This can be specified by the network administrator.

The machine can control TCP/IP access.

Limit the IP addresses from which access is possible by specifying the access control range.

For example, if you specify the access control range as **[192.168.15.16]**-**[192.168.15.20]**, the client PC addresses from which access is possible will be from 192.168.15.16 to 192.168.15.20.

Limitation

- Using access control, you can limit access involving LPR, RCP/RSH, FTP, IPP, DIPRINT, Web Image Monitor, SmartDeviceMonitor for Client or Desk-TopBinder. You cannot limit the monitoring of SmartDeviceMonitor for Client.
- □ You cannot limit access involving telnet or SmartDeviceMonitor for Admin when using the SNMPv1 monitoring.

1 Open the Web Image Monitor.

2 Enter "http://(machine's-address)/" in the address bar to access the machine.

E Log onto the machine.

The network administrator can log on using the appropriate login user name and login password.

Click [Configuration], click [Security], and then click [Access Control].

The [Access Control] page appears.

D To specify the IPv4 Address, in [Access Control Range], enter an IP address that has access to the machine. To specify the IPv6 Address, in [Access Control Range] - [Range], enter an IP address that has access to the machine, or in [Mask], enter an IP address that has access to the machine and specify the [Mask Length].

Click [Apply].

Access control is set.

2 Log off from the machine.

For details, see the Web Image Monitor Help.

Specifying Network Security Level

This can be specified by the network administrator.

This setting lets you change the security level to limit unauthorized access.

Set the security level to [Level 0], [Level 1], or [Level 2].

Select [Level 2] for maximum security to protect confidential information.

Select **[Level 1]** for moderate security. Use this setting if the machine is connected to the office local area network (LAN).

Select [Level 0] to use this setting if no information needs to be protected.

You can use the control panel to select the security level for the entire network.

If you change this setting using Web Image Monitor, the network security level settings other than the specified one will be reset to the default.

Reference

Encrypting Transmitted Passwords

Prevent login passwords, group passwords for PDF files, and IPP authentication passwords from being revealed by encrypting them for transmission.

Also, encrypt the login password for administrator authentication and user authentication.

Driver Encryption Key

Encrypt the password transmitted when specifying user authentication. To encrypt the login password, specify the driver encryption key on the machine and on the printer driver installed in the user's computer.

✓ Reference

See p.127 "Changing the Extended Security Functions".

Group Passwords for PDF Files

DeskTopBinder's PDF Direct Print function allows a PDF group password to be specified to enhance security.

🖉 Note

□ You cannot perform PDF Direct Print for compressed PDF files.

□ To use PDF direct print, the optional PostScript3 unit must be installed.

Password for IPP Authentication

To encrypt the IPP Authentication password on the Web Image Monitor, set **[Authentication]** to **[DIGEST]**, and then specify the IPP Authentication password set on the machine.

🖉 Note

You can use Telnet or FTP to manage passwords for IPP authentication, although it is not recommended.

Driver Encryption Key

This can be specified by the network administrator.

Specify the driver encryption key on the machine.

By making this setting, you can encrypt login passwords for transmission to prevent them from being analyzed.

Reference

See p.127 "Changing the Extended Security Functions".

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

2 Press the [User Tools/Counter] key.

PReference

See the printer driver Help. See the TWAIN driver Help.

Group Password for PDF files

This can be specified by the network administrator.

On the machine, specify the group password for PDF files.

By using a PDF group password, you can enhance security and so protect passwords from being analyzed.

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

🖉 Note

- The network administrator must give users the group password for PDF files that is already registered on the machine. The users can register it in Desk-TopBinder on their computers. For details, see the DeskTopBinder Help
- Make sure to enter the same character string as that specified on the machine for the group password for PDF files.
- □ The group password for PDF files can also be specified using Web Image Monitor. For details, see the Web Image Monitor Help.

Press the [User Tools/Counter] key.

PDF Group Password: (OK) Enter the PDF Group abc

B Press the [User Tools/Counter] key.

IPP Authentication Password

This can be specified by the network administrator.

Specify the IPP authentication passwords for the machine using Web Image Monitor.

By making this setting, you can encrypt IPP authentication passwords for transmission to prevent them from being analyzed.

🖉 Note

When using the IPP port under Windows XP or Windows Server 2003, you can use the operating system's standard IPP port.

1 Open the Web Image Monitor.

2 Enter "http://(machine's-address)/" in the address bar to access the machine.

3 Log onto the machine.

The network administrator can log on. Enter the login user name and login password.

4 Click [Configuration], click [Security], and then click [IPP Authentication].

The [IPP Authentication] page appears.

5 Select [DIGEST] from the [Authentication] list.

6 Enter the user name in the [User Name] box.

- **2** Enter the password in the [Password] box.
- Click [Apply].

IPP authentication is specified.

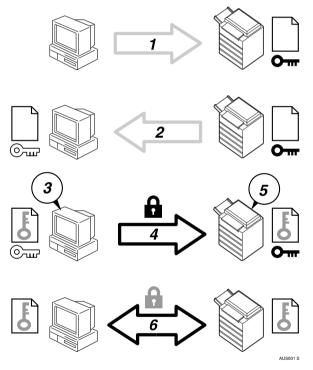

Log off from the machine.

Protection Using Encryption

When you access the machine using a Web Image Monitor or IPP, you can establish encrypted communication using SSL. When you access the machine using an application such as SmartDeviceMonitor for Admin, you can establish encrypted communication using SNMPv3 or SSL.

To protect data from interception, analysis, and tampering, you can install a server certificate in the machine, negotiate a secure connection, and encrypt transmitted data.

SSL (Secure Sockets Layer)

- To access the machine from a user's computer, request the SSL server certificate and public key.
- ② The server certificate and public key are sent from the machine to the user's computer.
- ③ A shared key is created on the user's PC, and then encrypted using the public key.
- ④ The encrypted shared key is sent to the machine.
- ⑤ The encrypted shared key is decrypted by the machine using the secret key.
- ③ The data is then encrypted using the shared key, and decrypted by the machine to attain secure transmission.

🖉 Note

□ To establish encrypted communication using SSL, the machine must have the printer and scanner functions.

SSL (Secure Sockets Layer) Encryption

This can be specified by the network administrator.

To protect the communication path and establish encrypted communication, create and install the server certificate.

There are two ways of installing a server certificate: create and install a self-certificate using the machine, or request a certificate from a certificate authority and install it.

Configuration flow (self-signed certificate)

- Creating and installing the server certificate Install the server certificate using Web Image Monitor.
- ② Enabling SSL Enable the [SSL/TLS] setting using Web Image Monitor.

Configuration flow (certificate issued by a certificate authority)

- Creating the server certificate
 Create the server certificate using Web Image Monitor.
 The application procedure after creating the certificate depends on the certificate authority. Follow the procedure specified by the certificate authority.
- ② Installing the server certificate Install the server certificate using Web Image Monitor.
- ③ Enabling SSL Enable the [SSL/TLS] setting using Web Image Monitor. Creating and Installing the Server Certificate (Self-Signed Certificate) Create and install the server certificate using Web Image Monitor.

🖉 Note

□ To confirm whether SSL configuration is enabled, enter https://(machine'saddress) in your Web Image Monitor's address bar to access this machine. If the "The page cannot be displayed" message appears, check the configuration as the SSL configuration is invalid.

Creating and Installing the Self-Signed Certificate

Create and install the server certificate using Web Image Monitor.

This section explains the use of a self-certificate as the server certificate.

1 Open the Web Image Monitor.

2 Enter "http://(machine's-address)/" in the address bar to access the printer.

3 Log onto the machine.

The network administrator can log on.

Enter the login user name and login password.

Click [Configuration], and then click [Device Certificate], under [Security].

5 Select a certificate.

Click [Create].

2 Make the necessary settings.

✓ Reference

For details about the displayed items and selectable items, see Web Image Monitor Help.

Click [OK].

The setting is changed.

Click [OK].

A security warning dialog box appears.

$I\!\!I$ Check the details, and then click [OK].

[Installed] appears under **[Certificate Status]** to show that a server certificate for the printer has been installed.

Log off from the machine.

🖉 Note

□ Click **[Delete]** to delete the server certificate from the machine.

Creating the Server Certificate (Certificate Issued by a Certificate Authority)

Create the server certificate using Web Image Monitor.

This section explains the use of a certificate issued by a certificate authority as the server certificate.

1 Open the Web Image Monitor.

2 Enter "http://(machine's-address)/" in the address bar to access the printer.

E Log onto the machine.

The network administrator can log on.

Enter the login user name and login password.

4 Click [Configuration], and then click [Device Certificate], under [Security]. The [Device Certificate] page appears.

5 Select a certificate

- **6** Click [Request].
- **2** Make the necessary settings.

PReference

For details about the displayed items and selectable items, see Web Image Monitor Help.

Click [OK].

[Requesting] appears for [Certificate Status] in the [Device Certificate] area.

9 Log off from the machine.

${f D}$ Apply to the certificate authority for the server certificate.

The application procedure depends on the certificate authority. For details, contact the certificate authority.

🖉 Note

□ If you apply for two certificates simultaneously, the certificate authority may not appear in the certificates. When you install these certificates, be sure to take notes of the certificate contents and the order in which the certificates were installed.

- Using Web Image Monitor, you can create the contents of the server certificate but you cannot send the application.
- Click **[Cancel Request]** to cancel the request for the server certificate.

Installing the Server Certificate (Certificate Issued by a Certificate Authority)

Install the server certificate using Web Image Monitor.

This section explains the use of a certificate issued by a certificate authority as the server certificate.

Enter the server certificate contents issued by the certificate authority.

1 Open the Web Image Monitor.

2 Enter "http://(machine's-address)/" in the address bar to access the printer.

3 Log onto the machine.

The network administrator can log on.

Enter the login user name and login password.

4 Click [Configuration], and then click [Device Certificate], under [Security]. The [Device Certificate] page appears.

5 Click [Install].

6 Enter the contents of the server certificate.

In the Device Certificate Request box, enter the contents of the server certificate received from the certificate authority.

For details about the displayed items and selectable items, see Web Image Monitor Help.

Click [OK].

[Installed] appears under **[Certificate Status]** to show that a server certificate for the machine has been installed.

E Log off from the machine.

Enabling SSL

After installing the server certificate in the machine, enable the SSL setting.

This procedure is used for a self-signed certificate or a certificate issued by a certificate authority.

1 Open the Web Image Monitor.

2 Enter "http://(machine's-address)/" in the address bar to access the printer.

E Log onto the machine.

The network administrator can log on.

Enter the login user name and login password.

4 Click [Configuration], and then click [SSL/TLS], under [Security].

The [SSL/TLS] page appears.

5 Click [Enable] for the protocol version used in [SSL/TLS].

5 Select the encryption communication mode for [Permit SSL/TLS Communication].

Click [Apply].

The SSL setting is enabled.

8 Log off from the machine.

🖉 Note

□ If you set [Permit SSL/TLS Communication] to [Ciphertext Only], enter "https://(machine's address)/" to access the machine.

User Settings for SSL (Secure Sockets Layer)

If you have installed a server certificate and enabled SSL (Secure Sockets Layer), you need to install the certificate on the user's computer.

The network administrator must explain the procedure for installing the certificate to users.

If a warning dialog box appears while accessing the machine using the Web Image Monitor or IPP, start the Certificate Import Wizard and install a certificate.

When the [Security Alert] dialog box appears, click [View Certificate].

The [Certificate] dialog box appears.

To be able to respond to inquiries from users about such problems as expiry of the certificate, check the contents of the certificate.

2 On the [General] tab, click [Install Certificate...].

Certificate Import Wizard starts.

B Install the certificate by following the Certificate Import Wizard instructions.

🖉 Note

- For details about how to install the certificate, see the Web Image Monitor Help.
- □ If a certificate issued by a certificate authority is installed in the printer, confirm the certificate store location with the certificate authority.

For details about where to store the certificate when accessing the machine using IPP, see the SmartDeviceMonitor for Client Help.

Setting the SSL / TLS Encryption Mode

By specifying the SSL/TLS encrypted communication mode, you can change the security level.

Encrypted Communication Mode

Using the encrypted communication mode, you can specify encrypted communication.

| Ciphertext Only | Allows encrypted communication only. If encryption is not possible, the machine does not communicate. |
|-------------------------|--|
| Ciphertext Priority | Performs encrypted communication if en- cryption is possible. If encryption is not possible, the machine communicates without it. |
| Ciphertext / Clear Text | Communicates with or without encryption, according to the setting. |

Setting the SSL / TLS Encryption Mode

This can be specified by the network administrator.

After installing the server certificate, specify the SSL/TLS encrypted communication mode. By making this setting, you can change the security level.

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ОК) |
|-----------------|-----|-------|
| Counter | | |
| System Settings | | |
| Logout | | |

B Select [Interface Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟System Settings 2/2 | \$ОК |
|----------------------|------|
| Interface Settings | |
| File Transfer | |
| Administrator Tools | |

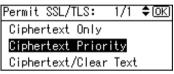

Select [Network] using [▲] or [▼], and then press the [OK] key.

| ∎Inte | rface | 1/1 | \$ОК |

| Netwo Print | rk I/F Sett | tings Li | ist |

5 Select [Permit SSL/TLS Comm.] using [▲] or [▼], and then press the [OK] key.

| ■Network | 7/7 | \$ОК) |
|----------------|-------|-------|
| Permit SSL/TLS | Comm. | |
| Host Name | | |
| Machine Name | | |

Select the encrypted communication mode using [▲] or [▼], and then press the [OK] key.

Select [Ciphertext Only], [Ciphertext Priority], or [Ciphertext/Clear Text] as the encrypted communication mode.

2 Press the [User Tools/Counter] key.

🖉 Note

□ The SSL/TLS encrypted communication mode can also be specified using Web Image Monitor. For details, see the Web Image Monitor Help.

SNMPv3 Encryption

This can be specified by the network administrator.

When using SmartDeviceMonitor for Admin or another application to make various settings, you can encrypt the data transmitted.

By making this setting, you can protect data from being tampered with.

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| User Tool | 3 | 174 | ¢0K |
|------------|-------|-----|-----|
| Counter | | | |
| System Set | tings | | |
| Logout | | | |
| | tings | | |

B Select [Interface Settings] using [▲] or [▼], and then press the [OK] key.

⊟System Settings 2/2 ‡OK Interface Settings File Transfer Administrator Tools

Select [Network] using [▲] or [▼], and then press the [OK] key.

| 🖹 Inter | face | 1/1 | \$ОК) |
|---------|----------|---------|-------|
| Networ | 'k | | |
| Print | I/F Sett | ings Li | st |

Select [Permit SNMPv3 Communictn.] using [▲] or [▼], and then press the [OK] key.

| ∎Network | 6/7 \$ OK |
|---------------|------------------|
| LAN Type | |
| Ping Command | |
| Permit SNMPv3 | Communictn. |

6 Select [Encryption Only] using [\blacktriangle] or [\checkmark], and then press the [OK] key.

Permit SNMP∨3: 1/1 ♦OK) Encryption Only Encryption/Clear Text

2 Press the [User Tools/Counter] key.

🖉 Note

To use SmartDeviceMonitor for Admin for encrypting the data for specifying settings, you need to specify the network administrator's [Encryption Password] setting and [Encryption Key] in [SNMP Authentication Information] in SmartDeviceMonitor for Admin, in addition to specifying [Permit SNMPv3 Communictn.] on the machine.

□ If network administrator's **[Encryption Password]** setting is not specified, the data for transmission may not be encrypted or sent.

PReference

For details about specifying the network administrator's **[Encryption Password]** setting, see p.20 "Registering the Administrator".

For details about specifying **[Encryption Key]** in SmartDeviceMonitor for Admin, see the SmartDeviceMonitor for Admin Help.

6. Specifying the Extended Security Functions

Changing the Extended Security Functions

In addition to providing basic security through user authentication and administrator specified access limits, you can increase security by encrypting transmitted data and data in the address book, for instance. If you need extended security, specify the machine's extended security functions before using the machine.

This section outlines the extended security functions and how to specify them. For details about when to use each function, see the corresponding chapters.

Changing the Extended Security Functions

To change the extended security functions, display the extended security screen as follows:

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Procedure for Changing the Extended Security Functions

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ≡User Tools | 1/4 | \$ОК) |
|-----------------|-----|-------|
| Counter | | |
| System Settings | | |
| Logout | | |

B Select [Administrator Tools] using [▲] or [▼], and then press the [OK] key.

Select [Extended Security] using [▲] or [▼], and then press the [OK] key.

■Admin. Tools 4/6 \$OK) Extended Security Prog/Chnge/Del LDAP Server LDAP Search

5 Select the setting you want to change using [▲] or [▼], and then press the [OK] key.

```
■Ext. Security 1/3 ◆ OK
Encrypt Address Book
Restrict Use of Dest.
Restrict Adding User Dest.
```

6 Change the setting, and then press the **[OK]** key.

2 Press the [User Tools/Counter] key.

Settings

Driver Encryption Key

This can be specified by the network administrator. Encrypt the password transmitted when specifying user authentication. The Driver Encryption Key must match the encryption key set on the machine.

See the printer driver Help. See the LAN Fax driver Help. See the TWAIN driver Help.

Encrypt Address Book

This can be specified by the user administrator. Encrypt the data in the machine's address book.

See p.90 "Encrypting the Data in the Address Book".

- On
- Off

🖉 Note

Default: Off

Restrict Use of Dest.

This can be specified by the user administrator.

The available fax and scanner destinations are limited to the destinations registered in the address book.

See p.85 "Restrictions on Destinations".

A user cannot directly enter the destinations for transmission.

Limitation

If you specify the setting to receive e-mails via SMTP, you cannot use [Restrict Use of Dest.].

🖉 Note

□ The destinations searched by "Search LDAP" can be used.

- On
- Off

🖉 Note

🗇 Default: Off

Restrict Adding User Dest.

This can be specified by the user administrator.

When **[Restrict Adding User Dest.]** is set to **[Off]**. After entering a fax or scanner destination directly, you can register it in the address book by pressing **[Add Dest]**. If **[On]** is selected for this setting, **[Add Dest]** does not appear. If you set **[Restrict Adding User Dest.]** to **[On]**, users can specify destinations directly, but cannot use **[Add Dest]** to register data in the address book. When this setting is made, only the user administrator can change the address book.

- On
- Off

🖉 Note

Default: Off

Restrict User Info.Display

This can be specified if user authentication is specified. When the job history is checked using a network connection for which authentication is not available, all personal information can be displayed as "*******". For example, when someone not authenticated as an administrator checks the job history using SNMP in SmartDeviceMonitor for Admin, personal information can be displayed as "*******" so users cannot be identified. Because no information identifying registered users can be viewed, unauthorized users can be prevented from obtaining information about the registered files.

- On
- Off

NoteDefault: Off

Settings by SNMPv1 and v2

This can be specified by the network administrator. When the machine is accessed using the SNMPv1, v2 protocol, authentication cannot be performed, allowing machine administrator settings such as the paper setting to be changed. If you select **[Prohibit]**, the setting can be viewed but not specified with SNMPv1, v2.

- Prohibit
- Do not prohibit
- 🖉 Note
- Default: Do not prohibit

Simple Encryption

This can be specified by the network administrator.

For example, this setting is set to **[On]** and you want to edit the address book in User Management Tool or Address Management Tool in SmartDevice-Monitor for Admin, or you want to access the machine using DeskTopBinder or the ScanRouter delivery software, enable SSL/TLS for encrypted communication. For details about specifying SSL/TLS, see p.122 "Setting the SSL / TLS Encryption Mode".

If you select [Restrict], specify the encryption setting using the printer driver.

- Restrict
- Do not Restrict

🖉 Note

Default: Do not Restrict

Transfer to Fax Receiver

This can be specified by the machine administrator.

If you use **[Forwarding]** under the fax function, files stored in the machine can be transferred or delivered.

If you select **[Off]** for this setting, stored files cannot be transferred by **[Forward-ing]**.

Use this setting, to prevent the stored files being transferred by mistake.

- Prohibit
- Do not prohibit

🖉 Note

D Default: **Do not prohibit**

□ If you select **[Prohibit]** for this setting, the following functions are disabled:

- Forwarding
- Delivery of Mail Received via SMTP

For details, see Facsimile Reference.

Authenticate Current Job

This can be specified by the machine administrator.

This setting lets you specify whether or not authentication is required for operations such as canceling jobs under the copier and printer functions.

If you select **[Login Privilege]**, authorized users and the machine administrator can operate the machine. When this is selected, authentication is not required for users who logged on to the machine before **[Login Privilege]** was selected. If you select **[Access Privilege]**, users who canceled a copy or print job in progress and the machine administrator can operate the machine.

Limitation

- Even if you select [Login Privilege] and log onto the machine, you cannot cancel a copy or print job in progress if you are not authorized to use the copy and printer functions.
- □ You can specify [Authenticate Current Job] only if [User Auth. Management] was specified.
- Login Privilege
- Access Privilege
- Off

🖉 Note

Default: Off

Password Policy

This can be specified by the user administrator.

The password policy setting is effective only if [Basic Auth.] is specified.

This setting lets you specify **[Complexity Setting]** and **[Minimum Character No.]** for the password. By making this setting, you can limit the available passwords to only those that meet the conditions specified in **[Complexity Setting]** and **[Minimum Character No.]**.

If you select **[Level 1]**, specify the password using a combination of two types of characters selected from upper-case letters, lower-case letters, decimal numbers, and symbols such as #.

If you select **[Level 2]**, specify the password using a combination of three types of characters selected from upper-case letters, lower-case letters, decimal numbers, and symbols such as #.

- Level 1
- Level 2
- Off
- Minimum Character No.

🖉 Note

- □ Complexity Setting Default: Off
- □ Minimum Character no. Default: 0

✤ @Remote Service

Communication via HTTPS for @Remote Service is disabled if you select [Prohibit].

When you select [Prohibit], contact your service representative.

- Prohibit
- Do not Prohibit

🖉 Note

□ Default: **Do not prohibit**

Other Security Functions

This section explains the settings for preventing information leaks, and functions that you can restrict to further increase security.

Fax Function

Not Displaying Destinations and Senders in Reports and Lists

You can specify whether or not to display destinations and senders by clicking **[Fax Features]**, **[Administrator Tools]**, **[Parameter Setting]** and specifying "Bit 4" and "Bit 5" under "Switch 04". Not displaying destinations and senders helps prevent information leaks.

PReference

For details, see "User Parameters", General Settings Guide.

Printing the Journal

When making authentication settings for users, to prevent personal information in transmission history being printed, set the Journal to not be printed. Also, if more than 200 transmissions are made, transmissions shown in the Journal are overwritten each time a further transmission is made.

To prevent the Transmission History being overwritten, perform the following procedures:

- In the default settings for Fax, under "Administrator Settings", "Parameter Settings" (Switch 03, Bit 7), change the setting for automatically printing the Journal.
- In the default settings for Fax, under "Administrator Settings", "Parameter Settings" (Switch 21, Bit 4), set "Transmit Journal by E-mail" to "ON".

Scanner Function

Print & Delete Scanner Journal

To prevent personal information in the transmission/delivery history being printed automatically, set user authentication and the journal will specify **[Do not Print:Disable Send]** automatically. If you do this, the scanner is automatically disabled when the journal history exceeds 100 transmissions/deliveries. When this happens, click **[Print Scanner Journal]** or **[Delete Scanner Journal]**. To print the scanner journal automatically, set **[On]** for "Print & Delete Scanner Journal".

Limiting Machine Operation to Customers Only

The machine can be set so that operation is impossible without administrator authentication.

The machine can be set to prohibit operation without administrator authentication and also prohibit remote registration in the address book by a service representative.

We maintain strict security when handling customer data. Administrator authentication prevents us operating the machine without administrator permission.

Use the following settings.

Service Mode Lock

Settings

Service Mode Lock

This can be specified by the machine administrator. Service mode is used by a customer service engineer for inspection or repair. If you set the service mode lock to **[On]**, service mode cannot be used unless the machine administrator logs onto the machine and cancels the service mode lock to allow the customer service engineer to operate the machine for inspection and repair. This ensures that the inspection and repair are done under the supervision of the machine administrator.

Specifying Service Mode Lock

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ОК) |
|-----------------|-----|-------|
| Counter | | |
| System Settings | | |
| Logout | | |

3 Select [Administrator Tools] using [▲] or [▼], and then press the [OK] key.

⊟System Settings 2/2 ¢OK) Interface Settings File Transfer Administrator Tools

Select [Service Mode Lock] using [▲] or [▼], and then press the [OK] key.

■Admin. Tools 5/6 **◆**OK) AOF (Always On) **Service Mode Lock** Firmware Version

5 Select [On] using [▲] or [▼], and then press the [OK] key.

Service Mode Lock 1/1 ♦OK On Off

A confirmation message appears.

Machine cannot be restored by service after locking, do you want to lock? No Yes

Press the [User Tools/Counter] key.

Canceling Service Mode Lock

For a customer service engineer to carry out inspection or repair in service mode, the machine administrator must log onto the machine and cancel the service mode lock.

Preparation

For details about logging on and logging off with administrator authentication, see p.24 "Logging on Using Administrator Authentication", p.25 "Logging off Using Administrator Authentication".

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ОК) |
|-----------------|-----|-------|
| Counter | | |
| System Settings | | |
| Logout | | |

B Select [Administrator Tools] using [▲] or [▼], and then press the [OK] key.

| ⊟System Settings 2/2 | \$ОК) |
|----------------------|-------|
| Interface Settings | |
| File Transfer | |
| Administrator Tools | |

Select [Service Mode Lock] using [▲] or [▼], and then press the [OK] key.

| ⊟Admin. Tools | 5/6 | \$ОК |
|------------------|-----|------|
| AOF (Always On) | | |
| Service Mode Loo | ck | |
| Firmware Version | n | |

5 Select [Off] using [▲] or [▼], and then press the [OK] key.

| Service | Mode | Lock | 1/1 | \$OK |
|---------|------|------|-----|------|
| On | | | | |
| Off | | | | |
| | | | | |

6 Press the **[User Tools/Counter]** key.

The customer service engineer can switch the machine to service mode.

7. Troubleshooting

Authentication Does Not Work Properly

This section explains what to do if a user cannot operate the machine because of a problem related to user authentication. Refer to this section if a user comes to you with such a problem.

A Message Appears

This section explains how to deal with problems if a message appears on the screen during user authentication.

The most common messages are explained. If some other message appears, deal with the problem according to the information contained in the message.

| Messages | Causes | Solutions |
|--|--|--|
| You do not have priv- ileges to use this function. | The authority to use the func- tion is not specified. | If this appears when trying to use a function: The function is not specified in the address book management setting as being available. The user administrator must decide whether to authorize use of the function and then assign the authority. If this appears when trying to specify a default setting: The administrator privileges differ depending on the default settings you wish to specify. Using the list of settings, the administrator responsible must decide whether to authorize use of the function. |

| Messages | Causes | Solutions |
|--------------------------|---|---|
| Failed to obtain URL. | The machine cannot connect to the server or cannot estab- lish communication. | Make sure the server's set- tings, such as the IP Address and host name, are specified correctly on the machine. Make sure the host name of |
| | | the UA Server is specified cor- rectly. |
| | The machine is connected to the server, but the UA service is not responding properly. | Make sure the UA service is specified correctly. |
| | SSL is not specified correctly on the server. | Specify SSL using Authentica- tion Manager. |
| | Server authentication failed. | Make sure server authentica- tion is specified correctly on the machine. |
| Authentication failed. | The entered login user name or login password is not correct | Ask the user administrator for the correct login user name and login password. |
| | The number of users regis- tered in the address book has reached the maximum limit allowed by Windows Authen- tication or , LDAP Authentica- tion, or Integration Server Authentication, so additional users cannot be registered. | Delete unnecessary user ad- dresses. |
| | The authentication server can- not be accessed when using Windows authentication , LDAP Authentication, or Inte- gration Server Authentication. | A network or server error may have occurred. Confirm with the LAN administrator of the network in use. |

Machine Cannot Be Operated

If the following conditions arise while users are operating the machine, provide instructions on how to deal with them.

| Condition | Cause | Solution |
|--|--|--|
| Cannot print using the printer driver or connect using the TWAIN driver. | User authentication has been rejected. | Enter the login user name and login password in the printer driver. |
| | | Confirm the user name and login name with the adminis- trator of the network in use if using Windows authentica- tion, LDAP Authentication, or Integration Server Authenti- cation. |
| | | Confirm with the user admin- istrator if using basic authenti- cation. |
| | The encryption key specified in the driver does not match the machine's driver encryp- tion key. | Specify the driver encryption key registered in the machine. See p.110 "Driver Encryption Key". |
| Cannot authenticate using the TWAIN driver. | Another user is logging on to the machine. | Wait for the user to log off. |
| | Authentication is taking time because of operating condi- tions. | Make sure the LDAP server setting is correct. Make sure the network set- tings are correct. |
| | Authentication is not possible while the machine is editing the address book data. | Wait until editing of the ad- dress book data is complete. |
| After starting [User Manage- ment Tool] or [Address Manage- ment Tool] in SmartDeviceMonitor for Ad- min and entering the correct login user name and pass- | "Restrict Simple Encryption" is not set correctly. Alterna- tively, [SSL/TLS] has been ena- bled although the required certificate is not installed in the computer. | Set "Restrict Simple Encryp- tion" to [On] . Alternatively, enable [SSL/TLS] , install the server certificate in the ma- chine, and then install the cer- tificate in the computer. |
| word, a message appears to notify that an incorrect pass- word has been entered. | | PReference See p.130 "Simple Encryp- |
| Cannot access the machine us- ing ScanRouter EX Profes- sional V3 / ScanRouter EX Enterprise V2. | | tion". See p.122 "Setting the SSL / TLS Encryption Mode". |
| Cannot connect to the Scan- Router delivery software. | The ScanRouter delivery soft- ware may not be supported by the machine. | Update to the latest version of the ScanRouter delivery software. |

| Condition | Cause | Solution |
|---|--|--|
| Cannot access the machine us- ing ScanRouter EX Profes- sional V2. | ScanRouter EX Professional V2 does not support user auther tication. | |
| Cannot log off when using the copying or scanner functions. | The original has not been scanned completely. When the original has scanned completely, [#] , remove the origin then log off. | |
| [Add Dest] does not appear on the fax or scanner screen for specifying destinations. | [Restrict Adding User Dest.] is set to [Off] in [Restrict Use of Dest.] in [Extended Security], so only the user administrator can register destinations in the ad- dress book. | Registration must be done by the user administrator. |
| Destinations specified using the machine do not appear. | User authentication may have been disabled while [All Users] is not specified. | Re-enable user authentication, and then enable [All Users] for the destinations that did not appear. For details about enabling [All Users] , see p.87 "Protecting the Address Book". |
| Cannot print when user au- thentication has been speci- fied. | User authentication may not be specified in the printer driver. | Specify user authentication in the printer driver. For details, see the printer driver Help. |
| If you try to interrupt a job while copying or scanning, an authentication screen ap- pears. | With this machine, you can log off while copying or scan- ning. If you try to interrupt copying or scanning after log- ging off, an authentication screen appears. | Only the user who executed a copying or scanning job can interrupt it. Wait until the job has completed or consult an administrator or the user who executed the job. |

8. Appendix

Supervisor Operations

The supervisor can delete an administrator's password and specify a new one. If any of the administrators forget their passwords or if any of the administrators change, the supervisor can assign a new password. If logged on using the supervisor's user name and password, you cannot use normal functions or specify defaults. Log on as the supervisor only to change an administrator's password.

∰Important

- The default login user name is "supervisor" and the login password is blank. We recommend changing the login user name and login password.
- When registering login user names and login passwords, you can specify up to 32 alphanumeric characters and symbols. Keep in mind that user names and passwords are case-sensitive.
- Be sure not to forget the supervisor login user name and login password. If you do forget them, a service representative will to have to return the machine to its default state. This will result in all data in the machine being lost and the service call may not be free of charge.

🖉 Note

- You cannot specify the same login user name for the supervisor and the administrators.
- Using Web Image Monitor, you can log on as the supervisor and delete an administrator's password.

Logging on as the Supervisor

If administrator authentication has been specified, log on using the supervisor login user name and login password. This section describes how to log on.

Press the [User Tools/Counter] key.

2 Press [Login].

| 1/4 | \$ОК) |
|-----|-------|
| | |
| | |
| | |
| | 1/4 |

Enter a login user name, and then press the [OK] key.

| Logir | 1: | | | | (OK) |
|-------|-----|-------|------|-------|------|
| Enter | r a | login | user | name. | |
| abc | _ | | | | |
| | | | | | |

🖉 Note

□ When you assign the administrator for the first time, enter "supervisor".

Enter a login password, and then press the [OK] key.

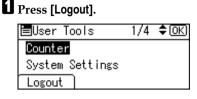

| Login: | OK) |
|-----------------------|-----|
| Enter login password. | |
| abc _ | |
| | |

🖉 Note

□ When you assign the administrator for the first time, press the **[OK]** key without entering login password.

Logging off as the Supervisor

If administrator authentication has been specified, be sure to log off after completing settings. This section explains how to log off after completing settings.

2 Press [Yes].

| Are | you sure | |
|-----|----------|-----|
| | want to | |
| log | out? | |
| | No | Yes |

Changing the Supervisor

Press the [User Tools/Counter] key.

2 Select [System Settings] using [▲] or [▼], and then press the [OK] key.

| ⊟User Tools | 1/4 | \$ 0К) |
|-----------------|-----|---------------|
| Counter | | |
| System Settings | | |
| | | |

B Select [Administrator Tools] using [▲] or [▼], and then press the [OK] key.

4 Select [Program/Change Admin.] using [▲] or [▼], and then press the [OK] key.

Select [Admin. Detailed Settings] using [▲] or [▼], and then press the [OK] key.

5 Select [Supervisor] using [▲] or [▼], and then press the [OK] key.

| ⊟Admin. | Settings | 3/3 | \$ 0К) |
|----------|----------|-----|---------------|
| Supervia | sor | | |
| | | | |
| | | E | xit |

Select [Login User Name] using [▲] or [▼], and then press the [OK] key.

| ∎Supervisor | 1/1 | \$ОК) |
|-----------------|-----|-------|
| Login User Name | | |
| Login Password | | |
| | E | xit |

Enter the login user name, and then press the [OK] key.

| Logir | n User Name: | <u>OK</u>) |
|-------|--------------|-------------|
| Enter | r user name. | |
| abc | supervisor | |
| | | |

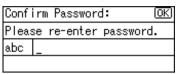

| ⊟Supervisor | 1/1 | \$OK |
