Notes for Users

This supplement contains notes for the operating instructions provided. Read the following notes in addition to those contained in the operating instructions.

◆ **Restrict Adding of User Destinations**

Even when [Restrict Adding of User Destinations] is specified, the passwords of users registered to addresses can be changed. Only the User Administrator can change settings other than password settings.

◆ **Limiting use of control panel fax reception functions**

You can disable printing and deleting of stored received faxes from the control panel. To disable these functions: under Parameter Settings, set User Parameter (switch 10, bit 0) to "On". When these functions are disabled, the "Print / Deleted Stored Reception File" screen will not appear, and the printing and deleting of stored received faxes from the control panel will not be possible. Also, if user authentication is running, the "Print / Delete Stored Reception File" screen will appear and printing and deleting of stored received faxes will be possible only when a user specified by "Stored Reception File User Setting" is logged in.
