## Safety Notices

#### Important Safety Notices

#### Prevention of Physical Injury

- 1. Before disassembling or assembling parts of the copier and peripherals, make sure that the copier power cord is unplugged.
- 2. The wall outlet should be near the copier and easily accessible.
- If any adjustment or operation check has to be made with exterior covers off or open while the main switch is turned on, keep hands away from electrified or mechanically driven components.
- 4. The copier drives some of its components when it completes the warm-up period. Be careful to keep hands away from the mechanical and electrical components as the copier starts operation.
- 5. The inside and the metal parts of the fusing unit become extremely hot while the copier is operating. Be careful to avoid touching those components with your bare hands.

#### Health Safety Conditions

- Toner and developer are non-toxic, but if you get either of them in your eyes by accident, it may cause temporary eye discomfort. Immediately wash eyes with plenty of water. If unsuccessful, get medical attention.
- The copier, which use high voltage power source, can generate ozone gas. High ozone density is harmful to human health. Therefore, the machine must be installed in a well-ventilated room.

#### Observance of Electrical Safety Standards

The copier and its peripherals must be serviced by a customer service representative who has completed the training course on those models.

# \Lambda WARNING

 Keep the machine away from flammable liquids, gases, and aerosols. A fire or an explosion might occur.

# 

• The Controller board on this machine contains a lithium battery. The danger of

explosion exists if a battery of this type is incorrectly replaced. Replace only with the same or an equivalent type recommended by the manufacturer. Discard batteries in accordance with the manufacturer's instructions and local regulations.

 The optional fax and memory expansion units contain lithium batteries, which can explode if replaced incorrectly. Replace only with the same or an equivalent type recommended by the manufacturer. Do not recharge or burn the batteries. Used batteries must be handled in accordance with local regulations.

#### Safety and Ecological Notes for Disposal

- 1. Do not incinerate toner bottles or used toner. Toner dust may ignite suddenly when exposed to an open flame.
- 2. Dispose of used toner, the maintenance unit which includes developer or the organic photoconductor in accordance with local regulations. (These are non-toxic supplies.)
- 3. Dispose of replaced parts in accordance with local regulations.
- 4. When keeping used lithium batteries in order to dispose of them later, do not put more than 100 batteries per sealed box. Storing larger numbers or not sealing them apart may lead to chemical reactions and heat build-up.

#### Laser Safety

The Center for Devices and Radiological Health (CDRH) prohibits the repair of laser-based optical units in the field. The optical housing unit can only be repaired in a factory or at a location with the requisite equipment. The laser subsystem is replaceable in the field by a qualified Customer Engineer. The laser chassis is not repairable in the field. Customer engineers are therefore directed to return all chassis and laser subsystems to the factory or service depot when replacement of the optical subsystem is required.

### \Lambda WARNING

 Use of controls, or adjustment, or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

### \Lambda WARNING

- **WARNING**: Turn off the main switch before attempting any of the procedures in the Laser Optics Housing Unit section. Laser beams can seriously damage your eyes.
- CAUTION MARKING:

# Symbols, Abbreviations and Trademarks

This manual uses several symbols and abbreviations. The meaning of those symbols and abbreviations are as follows:

\$	See or Refer to
$\langle 7 \rangle$	Clip ring
	Screw
t"	Connector
ŝ	Clamp
C	E-ring
SEF	Short Edge Feed
LEF	Long Edge Feed

Short Edge Feed (SEF)

Long Edge Feed (LEF)

#### Trademarks

Microsoft<sup>®</sup>, Windows<sup>®</sup>, and MS-DOS<sup>®</sup> are registered trademarks of Microsoft Corporation in the United States and /or other countries.

PostScript<sup>®</sup> is a registered trademark of Adobe Systems, Incorporated.

PCL<sup>®</sup> is a registered trademark of Hewlett-Packard Company.

Ethernet<sup>®</sup> is a registered trademark of Xerox Corporation.

PowerPC<sup>®</sup> is a registered trademark of International Business Machines Corporation.

Other product names used herein are for identification purposes only and may be trademarks

of their respective companies. We disclaim any and all rights involved with those marks.

# 1. Installation

# Installation Requirements

Environment

- 1. Temperature Range: 10°C to 32°C (50°F to 89.6°F)
- 2. Humidity Range: 15% to 80% RH
- 3. Ambient Illumination: Less than 1500 lux (do not expose to direct sunlight)
- 4. Ventilation: 3 times/hr/person or more
- 5. Do not let the machine get exposed to the following:
  - 1) Cool air from an air conditioner
  - 2) Heat from a heater
- 6. Do not install the machine in areas that are exposed to corrosive gas.
- 7. Install the machine at locations lower than 2,500 m (8,200 ft.) above sea level.
- Install the machine on a strong, level base. (Inclination on any side must be no more than 5 mm.)
- 9. Do not install the machine in areas that get strong vibrations.

Machine Level

Front to back: Within 5 mm (0.2") Right to left: Within 5 mm (0.2") Machine Space Requirements

### 

This machine, which uses high voltage power sources, can generate ozone gas.
 High ozone density is harmful to human health. Therefore, the machine must be installed in a well-ventilated room.

- A: Over 100 mm (3.9")
- B: Over 100 mm (3.9")
- C: Over 100 mm (3.9")
- D: Over 100 mm (3.9")

Put the machine near the power source with the clearance shown above.

#### Power Requirements

- Insert the plug firmly in the outlet.
- Do not use an outlet extension plug or cord.
- Ground the machine.
- 1. Input voltage level:
  - 120 V, 60 Hz: More than 12 A
  - 220 V to 240 V, 50 Hz/60 Hz: More than 8 A
- 2. Permissible voltage fluctuation: ±10 %
- 3. Do not put things on the power cord.

# **Optional Unit Combinations**

### Machine Options

No.	Options	Remarks		
1	2-tray paper feed unit	One from No.1 or No.2		
2	Large capacity tray			
3	Platen cover	One from No.3 or No.4		
4	ARDF			
5	1-bin tray unit	-		
6	Bridge unit	One from No.6 or No.7		
7	Shift tray			
8	1000-sheet booklet finisher	One from No.8, No.10 or No.11; Requires No.6 and one from No.1 and No.2.		
9	*Punch kit (3 types)	No. 8 required; One of the three types		
10	1000-sheet finisher	One from No.8, No.10 or No.11; Requires No.6 and one from No.1 and No.2.		
11	500-sheet finisher	One from No.8, No.10 or No.11; Requires No.6.		

\*: Child options (Child options require a parent option.)

### Controller Options

No.	Options	Remarks	
1	IEEE 1394	One from the two (I/F Slot A)	
2	USB Host Interface Unit		
3	IEEE 802.11b	One from the three (I/F Slot B)	
4	IEEE 1284		

#### Installation

21-Apr-2006

5	Bluetooth	
6	File Format Converter	I/F Slot C Requires fax unit option (B786)
7	PostScript 3	
8	PictBridge Option	One from the three (SD card slot 2)
9	Data Overwrite Security Unit	
11	Browser Unit	SD card slot 3 (during installation only)
12	Copy Data Security Unit	-

## **Copier Installation**

# 

 Make sure that the image transfer belt is in its correct position before you move the machine. Otherwise, the image transfer belt and the black PCU can be damaged.

Power Sockets for Peripherals

# ACAUTION

- Rating voltage for peripherals.
- Make sure to plug the cables into the correct sockets.

Installation

Installation Flow Chart

This flow chart shows the best procedure for installation.

You need the optional paper tray unit or the LCT if you want to install the finisher (B408 or B793).

The punch unit is for 1000-sheet booklet finisher (B793).

### Accessory Check

Check the quantity and condition of these accessories.

Installation Procedure

## 

 Remove the tape from the development units before you turn the main switch on. The development units can be severely damaged if you do not remove the tape.

Put the machine on the paper tray unit or the LCT first if you install an optional paper tray unit or the optional LCT at the same time. Then install the machine and other options.

🔸 Note

 Keep the shipping retainers after you install the machine. You may need them in the future if you transport the machine to another location.

#### Tapes and Retainers

- 1. Remove all the tapes and retainers on the machine.
- 2. Remove all the tapes and retainers in trays 1 and 2, and then take out the power cord from tray 1 (if applicable).
- 3. Remove the scanner unit stay [A].
- 4. Open the front door [B], and then remove the jam location sheet [C].
- 5. Keep the scanner unit stay [A] inside the front door [B].
- 6. Reattach the jam location sheet.
- 7. Close the front door.

#### **Developer and Toner Bottles**

#### 1. Open the front door [A].

GSA model (-58) and EU models (-67/-26) **do not** require steps from 2 to 7. Skip to step 8 if you install these models.

1. Remove the stopper [B] ( $\mathscr{F} \times 1$ ).

🔸 Note

- This stopper locks the drum positioning plate lever.
- 2. Release the image transfer belt lever [C], and turn the drum positioning plate lever [D] counterclockwise.
- 3. Open the drum positioning plate [E].
- 4. Remove all tapes [F] from the four development units.

Vote Note

- When you remove the tape from the development unit, hold the development unit with your hand, and then pull the tape.
- 5. Close the drum positioning plate. Then lock the image transfer belt lever and turn the drum positioning plate lever clockwise.
- 6. Lock the drum positioning plate lever with the stopper [B] ( $\mathscr{F} \times 1$ ).
- 7. Shake each toner bottle five or six times.

- 8. Install each toner bottle [G] in the machine.
- 9. Close the front door.

#### Paper Trays

1. Pull each paper tray out. Then adjust the side guides and end guide to match the paper size.

Vote Note

• To move the side guides, first pull out the tray fully. Then push down the green lock at the rear inside the tray.

2. Pull out the feeler [A] for the output tray full detection mechanism.

Installation

#### Emblem and Decals

1. Attach the correct emblem [A] and the cover [B] to the front door [C] of the machine, if the emblem is not attached.

🕹 Note

- If you want to change the emblem that has been already attached, remove the panel with an object (not a sharp object) as shown [D], and then install the correct emblem.
- 2. Attach the correct paper tray number and size decals to the paper trays [E].
  - Paper tray number and size decals are also used for the optional paper tray or the optional LCT. Keep these decals for use with these optional units.

**Fire Prevention Cover** 

When the copier is installed on the floor without the optional paper tray unit or a table, the cover [A] must be attached to the copier.

Install the cover [A] at the right side of the copier.

#### Manual Pocket Attachment

- 1. Attach the manual pocket [A] to the left side of the copier (snap rivet x 2).
- 2. If any finisher has been installed, attach the manual pocket [B] to the rear side of a finisher (snap rivet x 2).

Initialize the Developer

- 1. Plug in the machine.
- 2. Make sure that the platen or ARDF is closed and the main power is turned off.
- Turn the main power switch on. The machine automatically starts the initialization procedure. The Start button LED (<sup>(\*)</sup>) turns green when this procedure has finished.
- 4. Make copies of image samples (text, photo, and text/photo modes).
- 5. Do the Automatic Color Calibration process (ACC) as follows:
  - 1. Print the ACC test pattern (User tools > Maintenance > ACC > Start).
  - 2. Put the printout on the exposure glass.
  - 3. Put 10 sheets of white paper on top of the test chart.
  - 4. Close the ARDF or the platen cover.
  - 5. Press "Start Scanning" on the LCD panel. The machine starts the ACC.
- 6. Check that the sample image has been copied normally.

Installation

Settings Relevant to the Service Contract

Change the necessary settings for the following SP modes if the customer has made a service contract.

🔸 Note

 You must select one of the counter methods (developments/prints) in accordance with the contract (IPSP5-045-001).

ltem	SP No.	Function	Default
Counting method	SP5-045-001	Specifies if the counting method used in meter charge mode is based on developments or prints. NOTE: You can set this one time only. You cannot change the setting after you have set it for the first time.	"0": Developments
A3/11" x 17" double counting	buble SP5-104-001 for A3/11" x 17" paper. When you have to change this setting, contact your		"No": Single counting
Service Tel. No. Setting	SP5-812-001 through 0045812-002 programs the service station fax number. The number is printed on the counter list when the meter charge mode is selected. This lets the user fax the counter data to the service station.		

#### Moving the Machine

This section shows you how to manually move the machine from one floor to another floor. See the section "Transporting the Machine" if you have to pack the machine and move it a longer distance.

Remove all trays from the optional paper feed unit or LCT.

#### Transporting the Machine

#### Main Frame

- 1. Do SP 4806-001 to move the scanner carriage from the home position. This prevents dust from falling into the machine during transportation.
- 2. Remove the toner cartridges. This prevents toner flow into the toner supply tube, which is caused by vibration during transport. This can also cause the tube to be clogged with toner.
- 3. Make sure there is no paper left in the paper trays. Then fix down the bottom plates with a sheet of paper and tape.
- 4. Empty the toner collection bottle. Then attach securing tape to stop the toner bottle from coming out.
- 5. Do one of the following:
  - Attach shipping tape to the covers and doors.
  - Shrink-wrap the machine tightly.

#### 🔸 Note

- After you move the machine, Make sure you do the "Auto Color Registration" as follows. This optimizes color registration.
  - 1. Do the "Forced Line Position Adj. Mode c" (SP2-111-3).
  - Then do the "Forced Line Position Adj. Mode a" (SP2-111-1). To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.
- Make sure that the side fences in the trays are correctly positioned to prevent color registration errors.

#### **1000-sheet Booklet Finisher**

Before the 1000-sheet booklet finisher is transported, move the shift tray to the shipping position with SP6137-003 ("ON"), and then remove the shift tray cover.

# Paper Feed Unit (B800)

### Accessory Check

Check the quantity and condition of the accessories against the following list.

No.	Description	Q'ty
1	Caster stand	6
2	Securing bracket	2
3	Screw (M3x6 x 6, M4x10 x 2)	8
4	Spring Washer Screw	1
5	Rear stand cover	1
6	Left stand cover	1
7	Front stand cover	1

Installation Procedure

## 

- Turn off the main switch of the copier and unplug the power cord before you start the installation procedure.
- You need two or more persons to lift the copier. The copier is highly unstable when lifted by one person, and may cause human injury or property damage.
- Do not lift the copier with the paper feed unit installed. Otherwise, the handle and grips may be damaged.

- 1. Remove all tape on the paper feed unit.
- 2. Remove the paper trays and remove all tape and padding.

- 3. Grasp the handle [A] and grips [B] of the machine.
- 4. Lift the copier and install it on the paper feed unit [C].

- 5. Remove tray 2 of the machine.
- 6. Fasten the spring washer screw [D], using the cutout in the securing bracket [E] as a tool.
- 7. Reinstall tray 2.
- 8. Attach the securing brackets [E] (M4x10  $\mathscr{P}$  x 1 each).

 One of the securing brackets is used as a securing tool (the cutout [F] is used in step 6). But the cutout [G] is for attaching the tray heater. Therefore, attach the securing brackets [E] after installing the tray heater if you will install the tray heater.

9. Attach the two caster stands [H] to front, left, and rear sides of the machine.

- 10. Attach the front stand cover [I], right stand cover [J] and rear stand cover [K] to the correct sides of the machine (M3x6 🌮 x 2: each).
- 11. Load paper into the paper feed unit.
- 12. Turn on the main power switch of the machine.
- 13. Check the paper feed unit operation and copy quality.

## LCT (B801)

### Accessory Check

Check the quantity and condition of the accessories against the following list.

No.	Description	Q'ty
1	Caster stand	6
2	Securing bracket	2
3	Screw (M3x6 x 6, M4x10 x 2)	8
4	Spring washer screw	1
5	Rear stand cover	1
6	Right stand cover	1
7	Front stand cover	1

Installation Procedure

### 

- Turn off the main switch of the copier and unplug the power cord before you start the installation procedure.
- You need two or more persons to lift the copier. The copier is highly unstable when lifted by one person, and may cause human injury or property damage.
- Do not lift the copier with the paper feed unit installed. Otherwise, the handle and grips may be damaged.

1. Remove all tapes and retainers in the LCT.

- 2. Grasp the handle [A] and grips [B] of the machine.
- 3. Lift the copier and install it on the LCT [C].

- 4. Remove tray 2 of the machine.
- 5. Fasten the spring washer screw [D], using the cutout in the securing bracket [E] as a tool.
- 6. Reinstall tray 2.
- 7. Attach the securing brackets [E] (M4x10 **#** x 1each).

 One of the securing brackets is used as a securing tool (the cutout [F] is used in step 6). But the cutout [G] is for attaching the tray heater. Therefore, attach the securing brackets [E] after installing the tray heater if you will install the tray heater.

8. Attach the two caster stands [H] to the front, right, and rear sides of the machine.

- 9. Attach the front stand cover [I], right stand cover [J] and rear stand cover [K] to the correct sides of the machine (M3x6 **%** x 2 each).
- 10. Load paper into the LCT.
- 11. Turn on the main power switch of the machine.
- 12. Check the LCT operation and copy quality.

# Auto Reverse Document Feeder (B789)

### Component Check

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	ARDF	1
2	Stamp Cartridge	1
3	Screwdriver Tool	1
4	Knob Screw	2
5	Stud Screw	2
6	Attention Decal – Top Cover	1

Installation

Installation Procedure

## 

• Unplug the copier power cord before starting the following procedure.

- 1. Remove all tapes and shipping retainers.
- 2. Remove the two screws already installed at the top rear of the machine.
- 3. Insert the two stud screws [A] on the top of the machine.

- 4. Mount the ARDF [B] by aligning the screw keyholes [C] in the ARDF support plate over the stud screws.
- 5. Slide the ARDF toward the front of the machine.
- 6. Secure the ARDF with the two knob screws [D].

7. Remove two screws [E] from the bottom of the ARDF.

8. Install the stamp cartridge [F] in the ARDF.

9. Peel off the platen sheet [G] and place it on the exposure glass.

- 10. Align the rear left corner of the platen sheet with the corner [H] on the exposure glass.
- 11. Close the ARDF.
- 12. Open the ARDF and check that the platen sheet is correctly attached.

- 13. Attach the decal [I] to the top cover as shown. Choose the language you want.
- 14. Plug in and turn on the main power switch of the machine, and then check the ARDF operation.
- 15. Make a full size copy. Check that the registrations (side-to-side and leading edge) and image skew are correct. If they are not, adjust the registrations and image skew referring to "Copy Adjustments" in the "Replacements and Adjustments" section.

## 1-Bin Tray Unit (B790)

#### **Component Check**

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	1-Bin Tray Unit	1
2	End-fence	1
3	Screws (M3 x 8)	3
4	Tray Support Bar	1
5	Тгау	1

Installation Procedure

# 

#### • Unplug the copier power cord before starting the following procedure.

If the bridge unit (B227) has already been installed in the machine, remove it before installing 1-bin tray unit (B790). This will make it easier for you to do the following procedure.

#### Installation

- 1. Remove all tapes.
- 2. Open the duplex unit at the right side of the machine.
- 3. Remove the front right cover [A] ( $\mathscr{F} \times 1$ ).

- 4. Remove the cover [B].
- 5. Remove the tray [C].
- 6. Remove the paper exit unit [D] (1 = 1 x 1).

- 2. Attach the tray support bar [F] to the tray [G] as shown, and then attach the end-fence [H].
- 3. Install the tray [G] (with the tray support bar) in the machine.
- 4. Reinstall the front right cover in the machine, and then close the right door of the machine.
- 5. Turn on the main power switch of the machine.
- 6. Check the 1-bin tray unit operation.

# Shift Tray Unit (B791)

### Component Check

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	Shift Tray Unit	1
2	Paper Guide - Large	1
3	Paper Guide - Small	2
4	Knob Screw	1
5	Connector Cover	1

Installation

Installation Procedure

## 

• Unplug the copier power cord before starting the following procedure.

- 1. Remove all tapes.
- 2. Remove the standard tray [A].
- 3. Remove the inner cover [B] ( $\mathscr{F} \times 1$ ).

- 4. Attach the connector cover [C] to the shift tray unit [D].
- 5. Install the shift tray unit [D] to the machine.

- 6. Open the left side door [E] of the shift tray unit.
- 7. Attach the shift tray unit to the machine with the knob screw [F].
- 8. Install the large paper guide [G] and two small paper guides [H].
- 9. Turn on the main power switch of the machine.
- 10. Check the shift tray unit operation.

### Bridge Unit (B227)

#### **Component Check**

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	Bridge Unit	1
2	Screw	1
3	Knob screw	1
4	Holder bracket	1

Installation Procedure

## 

Unplug the copier power cord before starting the following procedure.

🔸 Note

- 1. If you will install the 1-bin tray (B790) in the machine, install the 1-bin tray before you installing the bridge unit (B227). This will make it easier for you to do the following procedure.
- 2. If you will install a finisher (B408, B792 or B793) in the machine, install the finisher

after you install the bridge unit (B227).

- 1. Remove all tapes.
- 2. If the sensor feeler [A] is out, fold it into the machine.
- 3. Open the duplex unit at the right side of the machine.

- 4. Remove the standard tray [B].
- 5. Remove the front right cover [C] ( $\mathscr{F} \times 1$ ).
- 6. Remove the connector cover [D] ( $\mathscr{F} \times 1$ ).

7. Install the bridge unit [E] in the machine.

- 8. Secure the bridge unit with the knob screw [F] and screw [G].
- 9. Reinstall the front right cover in the machine. Then close the right door of the machine.

V Note

- Open the bridge unit cover [H] when installing the front right cover. Otherwise, the bridge unit cover is an obstacle for attaching the front right cover.
- 10. Install the optional finisher (refer to the finisher installation procedure).

Vote Note

- If you will not install the finisher at this time, install the holder bracket [I].
   Otherwise, the customer will damage the bridge unit if they pull up the bridge unit tray. When you install the finisher, you will need this bracket during the installation procedure.
- 11. Turn on the main power switch of the machine.
- 12. Check the bridge unit operation.

# 500-Sheet Finisher (B792)

### Accessory Check

Check the quantity and condition of the accessories against the following list.

No.	Description	Q'ty
1	Output Tray	1
2	Unit Holder	1
3	Support Bracket	2
4	Support Bracket Cover	2
5	Screws	6
6	Knob Screws	4
7	Snap Rings	2
8	Bracket Cover	1
9	Paper Guide	1

Installation Procedure

## 

- Unplug the main machine power cord before starting the following procedure.
- Before you install the 500-sheet finisher, the optional bridge unit (B227) must be installed

Beforehand: Installing on a machine with the optional paper feed unit or LCT

When you install this unit on a machine with the optional paper feed unit or LCT, you must install support brackets on the optional paper feed unit or LCT. These support brackets can prevent the machine from falling to the left side. You do not need to install support brackets on machines without the optional paper feed unit or LCT.

- Install the two support brackets [A] on the left side of the machine ( x 1 each).
- 2. Install the two support bracket covers [B] on the support brackets ( $\mathscr{F}$  x 1 each).

Installation of the 500-Sheet Finisher

1. Unpack the finisher and remove all tapes and retainers.

- 2. Attach the paper guide [A].
- 3. Attach the unit holder [B] and the holder bracket [C] (knob screw x 4).

#### 🕹 Note

 The holder bracket [C] must be placed outside the unit holder [B]. The holder bracket is provided with the bridge unit (B227).

4. Install the 500-sheet finisher [D] on the machine ( $\square x$  1).

- 5. Attach the bracket cover [E].
- 6. Install the output tray [F] on the 500-sheet finisher (2 snap rings).
- 7. Pull out the tray extension [G] of the bridge unit.
- 8. Turn on the main power switch, and then check the finisher operation.

# 1000-Sheet Finisher (B408)

### Accessory Check

Check the quantity and condition of the accessories against the following list.

No.	Description	Q'ty	B230/B237
1	Front Joint Bracket	1	0
2	Rear Joint Bracket	1	
3	Rear Joint Bracket	1	0
4	Grounding Plate	1	0
5	Сору Тгау	1	0
6	Staple Position Decal	1	0
7	Screw - M4 x 14	4	0
8	Knob Screw - M4 x 10	1	0
9	Screw - M3 x 8	1	0
10	Knob Screw - M3 x 8	1	0

O = Necessary, --- = Not necessary

Installation Procedure

### 

Unplug the main machine power cord before starting the following procedure.

If this finisher will be installed on the B230 or B237 copier, the following options must be installed before installing this finisher.

- Bridge Unit (B227)
- Paper Feed Unit (B800) or LCT (B801)
- 1. Unpack the finisher, and then remove the stopper [A] and tapes ( $\mathscr{F} \times 1$ ).

Install the front joint bracket [B], holder bracket [C] ( x 2 - M4 x 14), and rear joint bracket [D] ( x 2 - M4 x 14).

🗸 Note

• The holder bracket [C] must be placed outside the front joint bracket [B]. The holder bracket is provided with the bridge unit (B227).

3. Install the grounding plate [E] on the finisher ( x 2 - M3 x 8).

🔸 Note

- Use the screw removed in step 1 and the screw from the accessory box.
- 4. Open the front door [F] of the finisher, and then pull the locking lever [G].
- 5. Align the finisher on the joint brackets, and lock it in place by pushing the locking lever.
- 6. Secure the locking lever (1 knob screw M3 x 8).
- 7. Close the front door.
- 8. Install the copy tray [H] (1 knob screw M4 x 10).
- 9. Connect the finisher cable [I] to the main machine below the right rear handle.

- 10. Attach the staple position decal [J] to the ARDF as shown.
- 11. Turn on the main power switch and check the finisher operation.

# 1000-Sheet Booklet Finisher (B793)

### Accessory Check

Check the quantity and condition of the accessories against the following list.

No.	Description	Q'ty
1	Rear Joint Bracket	1
2	Front Joint Bracket	1
3	Grounding Plate	1
4	Upper Output Tray	1
5	Cushion	2
6	Lower Output Tray	1
7	Short Knob Screw	1
8	Long Knob Screw	1
9	Screw (M3 x 8)	2
10	Screw (M4 x 14)	4

Installation Procedure

### 

• Unplug the main machine power cord before starting the following procedure.

The bridge unit (B227) and optional paper feed unit (B800 or B801) must be installed before installing this finisher (B793).

1. Unpack the finisher and remove all tapes and packing materials from the finisher.

- 2. Open the front door [A] of the 1000-sheet booklet finisher, and then pull out the jogger unit [B].
- 3. Remove all tapes and packing materials from the inside of the finisher.

4. Attach the cushions [C] to the finisher.

#### 🔸 Note

- Make sure that the cushions are placed within 0 to 1 mm [D] from the edge of the cover or frame.
- 5. Install the ground plate [E] on the finisher ( $\mathscr{F} \times 2$ ; M3 x 8).

- Attach the rear joint bracket [F]
   (Px 2, M4 x 14).
- 7. Attach the front joint bracket [G] and the holder bracket [H] ( x 2; M4 x 14).
   Note
  - The holder bracket [H] must be placed outside the front joint bracket [G]. The holder bracket is provided with the bridge unit (B227).

- 8. Pull the lock lever [I] (Long knob screw x 1).
- 9. Slowly push the finisher to the left side of the machine, keeping its front door open until the brackets [J] [K] go into their slots.
- 10. Push the lock lever [I], and then secure it (Long knob screw x 1).
- 11. Close the front door of the finisher.
- 12. Connect the finisher connector [L] to the machine.

- 13. Install the upper output tray [M] (Short knob screw x 1).
- 14. Install the lower output tray [N].
- 15. Turn on the main power switch of the machine.
- 16. Check the 1000-sheet booklet finisher operation.

## Punch Unit

### Component Check

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	Punch Unit	1
2	Punch Drive Motor	1
3	Hopper Full Sensor Arm	1
4	Sub-scan Registration Sensor Unit	1
5	Punch Unit Stay	1
6	Sub-scan Registration Sensor Guide	1
7	Hopper	1
8	Screw	1
9	Step Screw	1
10	Spring	1

Installation

Installation

### 

Unplug the main machine power cord before starting the following procedure.
 If the 1000-sheet booklet finisher has been installed, disconnect it and pull it away from the machine.

- 1. If the finisher is connected to the machine, disconnect it.
- 2. Open the top cover [A] and then release the guide arm [B] (0 x 1).
- 3. Open the front door [C].
- 4. Pull the hook [D] up then remove the knob [E].
- 5. Timing belt cover [F].

6. Rear cover of the 1000-sheet booklet finisher [G] ( $\Re x$  2).

- 7. Cover bracket [H] (Px 1)
- 8. Remove the paper guide plate [I] from the rear side ( $\mathscr{F} \times 4$ ).

- 9. Install the punch unit stay [J] from the front side ( $\mathscr{F} \times 3$ ).
- 10. Install the sub-scan registration sensor guide [K] from the top ( $\mathscr{F} \ge 1$ ).

11. Remove the bracket [L] from the punch unit ( $\mathscr{F} \times 1$ ).

- 12. Install the punch unit [M] along the punch unit stay from the rear side.
- 13. Make sure to put the punch unit stay pin [N] through the hole

- 14. Connect the harnesses [P] to the main PCB.
- 15. Put the harnesses [Q] through the hole [R] in the rear frame ( $\stackrel{\frown}{\bowtie}$  x 1).

- 16. Install the punch drive motor [S] on the rear frame ( $\mathscr{F} \ge 2$ ).
- 17. Connect the drive motor harness [T] to the harness from the punch unit ( $\stackrel{\frown}{\supseteq}$  x 1).
- 18. Connect the home position sensor harness from the punch unit to the home position sensor [U].

- 19. Install the sub-scan registration sensor unit [V] from the rear side ( $\mathscr{F}$  x 2).
- 20. Route and connect the harnesses as shown (eq x 2).

- 21. Install the hopper full sensor arm [W] ( $\mathscr{F} \times 1$ , spring x 1).
- 22. Connect the harness from the sub-scan registration sensor unit to the hopper full sensor [X].

- 23. Install the hopper [Y] from the front side.
- 24. Reinstall the timing belt cover and knob.
- 25. Reinstall the rear cover ( $\mathscr{F} \times 2$ ).
- 26. Close the front door and top cover.
- 27. Install the 1000-sheet booklet finisher on the copier.
- 28. Plug in and turn on the main power switch.
- 29. Check the 1000-sheet booklet finisher operation.

Installation

### Mechanical Counter (NA Only)

#### Installation Procedure

- 1. Rear cover (see "Rear Cover" in the "Replacement and Adjustment" section)
- 2. Right rear cover (see "Right Rear Cover" in the "Replacement and Adjustment" section)
- 3. PSU bracket (see "PSU" in the "Replacement and Adjustment" section)
- 4. Install the mechanical counter for Bk [A] in the right frame of the machine.
- 5. Connect the harness [B] to the mechanical counter for Bk.
- 6. Route the harness as shown with clamps, and then connect it to CN260 on the IOB.
- 7. Install the mechanical counter for Full Color [C] in the bracket [D].
   Note
  - The mark [E] should be at the lower side, as shown in the diagram.
- 8. Connect the harness to the mechanical counter for Full Color.
- 9. Attach the bracket [D] to the frame of the IOB ( $\mathscr{F} \times 1$ ).
- 10. Reassemble the machine.
- 11. Plug in the power cord and turn on the main power switch.
- 12. Enter the SP mode.
- 13. Set SP5987-001 to "1: ON".
- 14. Exit the SP mode, and then turn the machine off and on.

## Key Counter Bracket

Installation Procedure

- 1. Open the right door.
- 2. Rear cover [A] ( x 7)
- 3. Scanner right cover [B] ( x 2)
- 4. Cut off the part [C] of the scanner right cover.
- 5. Punch out the small hole [D] using a screwdriver.

- 6. Hold the key counter plate nuts [E] on the inside of the key counter bracket [F] and insert the key counter holder [G].
- 7. Secure the key counter holder to the bracket ( $\Re x$  2).
- 8. Install the key counter cover [H] ( $\Re$  x 2).

- 9. Connect the harness to the connector [I] inside the machine.
- 10. Install the key counter.
- 11. Reassemble the machine.

# Key Counter Interface Unit

#### Installation Procedure

- 1. Rear cover (see "Rear Cover" in the "Replacement and Adjustment" section)
- 2. PSU bracket (see "PSU" in the "Replacement and Adjustment" section)
- 3. Install the four stud stays [A] in the PSU bracket.
- 4. Install the key counter interface board [B] to the PSU bracket with the four stud stays.
- 5. Connect the harness [C] between CN252 on the IOB and the connector of the key counter interface board.
- 6. Cut off the part [D] of the rear cover.
- 7. Connect the harness to the key counter interface board, and install the rear cover.
- 8. Connect the harness to a counter device.

# Anti-Condensation Heater (Scanner)

## Installation Procedure

- 1. Rear cover (see "Rear Cover" in the "Replacement and Adjustment" section)
- 2. Open the ARDF or platen cover.
- 3. Glass cover [A] (Px 4)
- 4. ARDF exposure glass [B]
- 5. Rear scale [C] ( x 3)
- 6. Exposure glass with left scale [D]

- 7. Move the scanner carriage to the right side by rotating the scanner motor [E].
- 8. Install the heater [F] in the scanner unit ( x 1, hook)
- 9. Put the connector [G] through the cutout.
- 10. Connect it to the connector [H] (blue and red cords) in the frame of the machine.
- 11. Reassemble the machine.

# Tray Heater

## Installation Procedure

- 1. Remove trays 1 and 2 from the machine.
- 2. Remove the connector cover [A] ( $\mathscr{F} \times 1$ ).
- 3. Connect the connector [B] of the heater to the connector of the main machine.
- 4. Install the heater [C] inside the machine ( $\mathscr{F} \times 1$ )
- 5. Reassemble the machine.

# **Controller Options**

#### Overview

This machine has I/F card slots and SD card slots for optional I/F connections and applications.

After you install an option, check that the machine can recognize it (see "Check All Connections" at the end of this section).

## I/F Card Slots

- Slot A is used for the IEEE1394 (FireWire) or USB Host only.
- Slot B is used for one of the optional I/F connections (only one can be installed): IEEE1284, IEEE802.11 (Wireless LAN), or Bluetooth
- Slot C is used for the file format converter only.

🔸 Note

 Only one of these cards (IEEE1284, IEEE802.11, and Bluetooth) can be installed at same time in this machine.

## SD Card Slots

- Slot 1 is used for the standard printer/scanner application only.
- Slot 2 is used for one of the optional applications: PostScript 3, Data Overwrite Security Unit, PictBridge
- Slot 3 is used for installing the Browser Unit, or for service only (for example, updating the firmware).

#### SD Card Appli Move

#### Overview

The service program "SD Card Appli Move" (SP5-873) lets you copy application programs from one SD card to another SD card.

Slot 1 and Slot 2 are used to store application programs. But there are 3 possible applications (PostScript 3, DOS unit, PictBridge). You cannot run application programs from Slot 3. However you can move application programs from Slot 3 to either Slot 1 or Slot 2 with the following procedure (Slot 1 has the priority in this procedure if both Slot 1 and Slot 2 are used.):

Make sure that the target SD card has enough space.

- 1. Enter SP5873 "SD Card Appli Move".
- 2. Then move the application from the SD Card in Slot 3 to the card in slot 1.

Vote Note

- Do steps 1-2 again if you want to move another application program.
- 3. Exit the SP mode.

Be very careful when you do the SD Card Appli Move procedure:

- The data necessary for authentication is transferred with the application program from an SD card to another SD card. Authentication fails if you try to use the SD card after you copy the application program from one card to another card.
- Do not use the SD card if it has been used before for other purposes. Normal operation is not guaranteed when such an SD card is used.

- Remove the cover [A] ( x 2), and then keep the SD card in the place [B] after you copy the application program from one card to another card. This is done for the following reasons:
  - 1. The SD card can be the only proof that the user is licensed to use the application program.
  - 2. You may need to check the SD card and its data to solve a problem in the future.
- You cannot copy PostScript application to another SD card. You have to copy the other application (PictBridge, DOS Unit) to the SD card that stores the PostScript application.

#### Move Exec

The menu "Move Exec" (SP5-873-001) lets you copy application programs from the original SD card to another SD card.

🛨 Important

- Do not turn ON the write protect switch of the system SD card or application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.
- 1. Turn the main switch off.
- 2. Make sure that an SD card is in SD Card Slot 1. The application program is copied into this SD card.
- 3. Insert the SD card (having stored the application program) in SD Card Slot 3. The application program is copied from this SD card.
- 4. Turn the main switch on.
- 5. Start the SP mode.
- 6. Select SP5-873-001 "Move Exec."
- 7. Follow the messages shown on the operation panel.
- 8. Turn the main switch off.

- 9. Remove the SD card from SD Card Slot 3.
- 10. Turn the main switch on.
- 11. Check that the application programs run normally.

## Undo Exec

"Undo Exec" (SP5-873-002) lets you copy back application programs from an SD card to the original SD card. You can use this program when, for example, you have mistakenly copied some programs by using Move Exec (SP5-873-001).

★ Important

- Do not turn ON the write protect switch of the system SD card or application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.
- 1. Turn the main switch off.
- 2. Insert the original SD card in SD Card Slot 3. The application program is copied back into this card.
- 3. Insert the SD card (having stored the application program) to SD Card Slot 1. The application program is copied back from this SD card.
- 4. Turn the main switch on.
- 5. Start the SP mode.
- 6. Select SP5-873-002 "Undo Exec."
- 7. Follow the messages shown on the operation panel.
- 8. Turn the main switch off.
- 9. Remove the SD card from SD Card Slot 3.

Vote Note

- This step assumes that the application programs in the SD card are used by the machine.
- 10. Turn the main switch on.
- 11. Check that the application programs run normally.
- 12. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

•

PostScript 3

Unplug the main machine power cord before you do the following procedure.

- 1. Remove the slot cover [A] from SD card slot 2 ( $\mathscr{F} \times 1$ ).
- 2. Turn the SD-card [B] label face to the rear of the machine. Then push it slowly into slot 2 until you hear a click.
- 3. Attach the slot cover [A] ( $\mathscr{F}$  x 1).

- 4. Attach the "Adobe PostScript 3" decal [C] to the front door.
- 5. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

File Format Converter

# 

Unplug the main machine power cord before you do the following procedure.

The fax unit (B786) must be installed before installing this unit. This is because the mother board that comes with the fax unit is necessary to connect the file format converter inside the machine.

- 1. Remove the slot cover [A] from I/F card slot C ( $\mathscr{F}$  x 2).
- 2. Install the file format converter [B] into I/F card slot C and then fasten it with screws.
- 3. Plug in and turn on the main power switch.
- 4. Check or set the following SP codes with the values shown below.

SP No.	Title	Setting
SP5-836-001	Capture Function (0:Off 1:On)	"1"
SP5-836-002	Panel Setting	"0"

- 5. Check the operation.
- 6. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

IEEE1394 (FireWire)

Installation Procedure

# A CAUTION

Unplug the main machine power cord before you do the following procedure.

You cannot install the USB host interface at the same time as the IEEE1394 unit.

- 1. Remove the slot cover [A] from I/F Card Slot A ( $\mathscr{F} \times 2$ ).
- 2. Install the FireWire board [B] (Knob-screw x 2) into I/F card slot A.
- 3. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

## UP Mode Settings for IEEE 1394

Enter the UP mode. Then do the procedure below to perform the initial interface settings for IEEE 1394. These settings take effect every time the machine is powered on.

- 1. Press the "User Tools/Counter" key.
- 2. On the touch panel, press "System Settings".
- 3. Press "Interface Settings".
- 4. Press "IEEE1394".
- 5. Press the following soft keys on the touch panel. Then set up the following settings:
  - "IP Address": Set the IP Address and Subnet Mask.
  - "IP over 1394": Enable or disable this setting as required. This setting enables IP over 1394 as the default setting for the printing method.
  - "SCSI Print": Enable or disable this setting as required. This setting enables SCSI Print as the default setting for the printing method.

• "Bi-directional SCSI Print": Switch bi-directional printing on or off for SCSI print.

SP Mode Settings for IEEE 1394

SP No.	Name	Function
5839 007	Cycle Master	Enables or disables cycle master function of the IEEE 1394 standard bus.
5839 008	BCR Mode	Sets the BCR (Broadcast Channel Register) setting for the Auto Node operation for the standard IEEE1394 bus for when IRM is not in use. The following three settings are available: "Standard," "IRM Color Copy," and "Always Effective."
5839 009	IRM 1394a Check	Determines whether an IRM check for IEEE 1394a is conducted for the Auto Node when IRM is not used.
5839 010	Unique ID	Enables the "Node_Unique_Id" setting for enumeration on the standard IEEE 1394 bus.
5839 011	Logout	Determines how successive initiator login requests are handled during login in for SBP-2.
5839 012	Login	Enables or disables exclusive login for SBP-2.
5839 013	Login MAX	Sets the limit for the number of logins for SBP-2. Range: 1 to 62.

## The following SP commands can be set for IEEE 1394.

**IEEE1284** 

Installation Procedure

# ACAUTION

• Unplug the main machine power cord before you do the following procedure. You can only install one of the following network interfaces at a time: (IEEE 802.11b (Wireless LAN), IEEE1284, Bluetooth).

- 1. Remove the slot cover [A] from I/F Card Slot B ( $\mathscr{F} \times 2$ ).
- 2. Install the interface board [B] (Knob-screw x 2) into I/F card slot B.
- 3. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

IEEE 802.11b (Wireless LAN)

Installation Procedure

# A CAUTION

Unplug the main machine power cord before you do the following procedure.
 You can only install one of the following network interfaces at a time: (IEEE 802.11b (Wireless LAN), IEEE1284, Bluetooth).

- 1. Remove the slot cover [A] from I/F Card Slot B ( $\mathscr{F}$  x 2).
- 2. Install the wireless LAN board (Knob-screw x 2) into I/F card slot B.
- 3. Install the wireless LAN card [B] in the wireless LAN board [C]. Make sure the card label faces to the front of the machine.
- 4. Attach the cover [D] to the wireless LAN card.
- 5. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

You may have to move the machine if the reception is not clear.

- 1. Make sure that the machine is not located near an appliance or any type of equipment that generates strong magnetic fields.
- 2. Put the machine as close as possible to the access point.

UP Mode Settings for Wireless LAN

Enter the UP mode. Then do the procedure below to perform the initial interface settings for IEEE 802.11b. These settings take effect every time the machine is powered on.

Vote Note

You cannot use the wireless LAN if you use Ethernet.

- 1. Press the "User Tools/Counter" key.
- 2. On the touch panel, press "System Settings".

🔸 Note

- The Network I/F (default: Ethernet) must be set for either Ethernet or wireless LAN.
- 3. Select "Interface Settings" → "Network" (tab) → "Network I/F Setting"
- 4. Press "IEEE 802.11b". Only the wireless LAN options show.
- 5. Communication Mode. Select either "802.11 Ad hoc", "Ad hoc" or "Infrastructure".
- 6. SSID Setting. Enter the SSID setting. (The setting is case sensitive.)
- 7. Channel. You need this setting when Ad Hoc Mode is selected. Range: 1 to 14 (default: 11)

V Note

- The allowed range for the channel settings may vary for different countries.
- 8. WEP (Encryption) Setting. The WEP (Wired Equivalent Privacy) setting is designed to protect wireless data transmission. The same WEP key is required on the receiving side in order to unlock encoded data. There are 64 bit and 128 bit WEP keys.

```
WEP:
Selects "Active" or "Inactive". ("Inactive" is default.)
Range of Allowed Settings:
64 bit 10 characters
128 bit26 characters
```

9. Transmission Speed. Press the Next button to show more settings. Then select the transmission speed for the mode: Auto, 11 Mbps, 5.5 Mbps, 2 Mbps, 1 Mbps (default: Auto). This setting should match the distance between the closest machine or access point. This depends on which mode is selected.

Vote Note

 For the Ad Hoc Mode, this is the distance between the machine and the closest PC in the network. For the Infrastructure Mode, this is the distance between the machine and the closest access point.

11 Mbps: 140 m (153 yd.)

5.5 Mbps: 200 m (219 yd.)

- 2 Mbps: 270 m (295 yd.)
- 1 Mbps: 400 m (437 yd.)
- 10. Press "Return to Default" to initialize the wireless LAN settings.

## Press "Yes" to initialize the following settings:

- Transmission mode
- Channel
- Transmission Speed
- WEP
- SSID
- WEP Key

## SP Mode Settings for IEEE 802.11b Wireless LAN

SP No.	Name	Function
5840 006	Channel MAX	Sets the maximum range of the channel settings for the country.
5840 007	Channel MIN	Sets the minimum range of the channels settings allowed for your country.
5840 011	WEP Key Select	Used to select the WEP key (Default: 00).
UP mode	Name	Function
	SSID	Used to confirm the current SSID setting.
WEP Key	Used to confirm the current WEP key setting.	
WEP Mode	Used to show the maximum length of the string that can be used for the WEP Key entry.	

#### The following SP commands and UP modes can be set for IEEE 802.11b

Bluetooth

# 

• Unplug the main machine power cord before you do the following procedure. You can only install one of the following network interfaces at a time: (IEEE 802.11b (Wireless LAN), IEEE1284, Bluetooth).

- 1. Remove the slot cover [A] from I/F Card Slot B [A] ( $\mathscr{F}$  x 2).
- 2. Install the Bluetooth board [B] (Knob-screw x 2) into I/F card slot B.
- 3. Insert the Bluetooth card [C] into the Bluetooth card adaptor [D]. .
- 4. Attach the antenna cap [E] to the Bluetooth card.
- 5. Install the Bluetooth card adaptor [D] into Bluetooth board [B].
- 6. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

Copy Data Security Unit

# 

Unplug the main machine power cord before you do the following procedure.

■ U

• If you install this option, you cannot use scanner or fax functions.

1. Remove the rear cover [A] of the machine ( $\Im x$  7).

- 1. Loosen the eight screws.
- 2. Slide up the controller box cover [B], and then remove it.
- 3. Attach the ICIB-2 (copy data security board) [C] to CN 504 on the BICU ( $\mathscr{F} \times 2$ ).
- 4. Reassemble the machine.

Installing Setting

- 1. Plug in and turn on the main power switch.
- 2. Go into the User Tools mode, and select System Settings > Administrator Tools > Copy Data Security Option > "On".
- 3. Exit the User Tools.
- 4. Check the operation.

🔸 Note

- The machine will issue an SC165 error if the machine is powered on with the ICIB-2 removed and the "Data Security for Copying" feature set to "ON".
- 5. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

## Data Overwrite Security Unit Type D (B735)

Before You Begin the Procedure

- 1. Make sure that the following settings are not at their factory default values:
  - Supervisor login password
  - Administrator login name
  - Administrator login password

If any of these settings is at a factory default value, tell the customer these settings must be changed before you do the installation procedure.

## 2. Make sure that "Admin. Authentication" is ON.

[System Settings] – [Administrator Tools] – [Administrator Authentication Management] - [Admin. Authentication]

If this setting is OFF, tell the customer this setting must be ON before you do the installation procedure.

## 3. Make sure that "Administrator Tools" is enabled (selected).

[System Settings] – [Administrator Tools] – [Administrator Authentication Management] - [Available Settings]

If this setting is disabled (not selected), tell the customer this setting must be enabled (selected) before you do the installation procedure.

Seal Check and Removal

# 

- You must check the box seals to make sure that they were not removed after the items were sealed in the box at the factory before you do the installation.
- 1. Check the box seals [A] on each corner of the box.
  - Make sure that a tape is attached to each corner.
  - The surfaces of the tapes must be blank. If you see "VOID" on the tapes, do not install the components in the box.
- 2. If the surfaces of the tapes do not show "VOID", remove them from the corners of the box.
- 3. You can see the "VOID" marks [B] when you remove each seal. In this condition, they cannot be attached to the box again.

Installation Procedure

# A CAUTION

- Unplug the main machine power cord before you do the following procedure.
   Note
  - You must install the data overwrite security unit in SD Card slot 2. However, the Postscript option and the PictBridge option are also installed in SD Card slot 2. You must do the SD Card Appli move procedure first if you have the postscript or PictBridge option installed and you want to install the data overwrite security unit.

- 1. Turn off the main power switch if the machine is turned on.
- 2. Disconnect the network cable if the NIB is installed.
- 3. Remove the slot cover [A] of SD card slot 2 ( $\mathscr{F}$  x 1).
- 4. Turn the SD-card [B] label face to the rear of the machine. Then push it slowly into slot 2 until you hear a click.
- 5. Connect the network cable if the NIB option is installed.
- 6. Turn on the main power switch.
- 7. Go into the SP mode and push "EXECUTE" with SP5-878.
- 8. Exit the SP mode and turn off the operation switch. Then turn off the main power switch.
- 9. Turn on the machine power.
- 10. Do SP5990-005 (SP print mode Diagnostic Report).
- 11. Make sure the ROM number and firmware version in area [A] of the diagnostic report are the same as those in area [B].
  - [A]: "ROM Number/Firmware Version" "HDD Format Option"
  - [B]: "Loading Program" "GW2a\_zoffy"

Diagnostic Report:	"ROM No. / Firmware Version" [A]	"Loading Program" [B]
Data Overwrite Security	HDD Format Option:	GW2a_zoffy:
Unit	B7355060 / 0.03	B7355060 / 0.03

🛨 Important

- The ROM number and firmware version number change when the firmware is upgraded. However, the important thing is to make sure the numbers in [A] are the same as the numbers in [B].
- If the ROM numbers are not the same, or the version numbers are not the same, this
  means the unit was not installed correctly.
  - If this happens:

Make sure the unit type (Type D).

If they do not match:

## 1) Replace the NV-RAM

- 2) Replace the "Data Overwrite Security Unit" (SD card) with the correct type
- 3) Do the installation procedure in this procedure again, from Step 1.
- 12. Go into the User Tools mode, and select System Settings> Administrator Tools> Auto Erase Memory Setting> On.
- 13. Exit the User Tools mode.

- 14. Check the display and make sure that the overwrite erase icon [A] shows.
- 15. Make a Sample Copy.
- 16. Check the overwrite erase icon.
  - The icon [C] changes to [D] when job data is stored in the HDD.
  - The icon goes back to its usual shape [E] after this function has completed a data overwriting in the HDD.

**USB Host Interface** 

# 

• Unplug the main machine power cord before you do the following procedure.

- 1. If the IEEE1394 unit is installed in I/F Card Slot A, remove it.
- 2. Remove the slot cover [A] from I/F Card Slot A ( $\mathscr{F} \times 2$ ).
- 3. Install the USB Host Interface [B] (Knob-screw x 2) into I/F card slot A.
- 4. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

# 

- Unplug the main machine power cord before you do the following procedure.
   Note
  - You must install the PictBridge option in SD Card slot 2. However, the Postscript option and the data overwrite security unit option are also installed in SD Card slot 2. You must do the SD Card Appli move procedure first if you have the postscript or data overwrite security unit option installed and you want to install the PictBridge unit.
  - You must install the USB Host Interface when using the PictBridge unit.

- 1. Remove the slot cover [A] from SD card slot 2 ( $\mathscr{F} \times 1$ ).
- 2. Turn the SD-card [B] label face to the rear of the machine. Then push it slowly into slot 2 until you hear a click.
- 3. Attach the slot cover [A] ( X 1).
- 4. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

Browser Unit Type B

# 

Unplug the main machine power cord before you do the following procedure.

SD card slot 3 is basically used only for service maintenance. Do not leave an SD card in slot 3 after installing an application.

- 1. Remove the slot cover [A] from SD card slot 3 ( $\Re x$  1).
- 2. Turn the SD-card [B] label face to the rear of the machine. Then push it slowly into slot 3 until you hear a click.
- 3. Plug in and turn on the main power switch.
- 4. Push the "User Tools" key.
- 5. Push the "Login/ Logout" key.
- 6. Login with the administrator user name and password.
- 7. Touch "Extended Feature Settings" on the LCD.
- 8. Touch "Install" on the LCD.
- 9. Touch "SD Card".
- 10. Touch the "Browser" line.
- 11. Under "Install to:" touch "Machine HDD" and touch "Next".
- 12. When you see "Ready to Install", check the information on the screen to confirm your previous selection.
- 13. Touch "OK". You will see "Installing...", and then "Completed".
- 14. Touch "Exit" to go back to the setting screen.
- 15. Touch "Change Allocation".
- 16. Touch the "Browser" line.
- 17. Press one of the hard keys, which you want to use for the Browser Unit.
- 18. Touch "OK".

81

- 19. Touch "Exit" twice to go back to the copy screen.
- 20. Turn off the main power switch.
- 21. Remove the SD card from slot 3.
- 22. Attach the slot cover [A] ( $\mathscr{P}x$  1).

**Check All Connections** 

- 1. Plug in the power cord. Then turn on the main switch.
- 2. Enter the printer user mode. Then print the configuration page.User Tools > Printer Settings > List Test Print > Config. Page

All installed options are shown in the "System Reference" column.

# 2. Preventive Maintenance

# Settings

Before removing the old PM parts

- 1. Enter the SP mode.
- 2. Output the SMC logging data with SP5-990-004.
- 3. Set the following SPs to "1" before you turn the power off. Then, the machine will reset the PM counters automatically. In the case of developer, the developer initialization will also be done automatically.
- 4. Exit the SP mode.

Item	SP
Developer	Black: 3902-005 Yellow: 3902-006 Cyan: 3902-007 Magenta: 3902-008
Drum Unit	Black: 3902-009 Yellow: 3902-010 Cyan: 3902-011 Magenta: 3902-012
Fusing Unit Parts (not necessary for complete fusing units; see below)	3902-014
Image Transfer Belt Cleaning Unit	3902-015
Paper Transfer Unit	3902-016
Toner Collection Bottle (if not full or near-full)	3902-017

For the following units, there is a new unit detection mechanism. It is not necessary to reset PM counters.

- PCU
- Development unit
- Complete fusing unit

Toner Collection Bottle (if full or near-full)

## After installing the new PM parts

- 1. Turn on the main power switch.
- 2. Output the SMC logging data with SP5-990-004 and check the counter values.
- 3. Make sure that the PM counters for the replaced units are "0" with SP7-803. If the PM counter for a unit was not reset, then reset that counter with SP 7-904.
- 4. Make sure that the exchange counter counts up with SP7-853.
- 5. Make sure that the counters for the previous units (SP7-906) on the new SMC logging data list (from step 2 above) are equal to the counters (SP7-803) for these units on the previous SMC logging data list (the list that was output in the "Before removing the old parts" section).
- 6. Make sure that the unit replacement date is updated with SP7-950.

#### Preparation before operation check

- 1. Clean the exposure glasses (for DF and book scanning).
- 2. Enter the user tools mode.
- 3. Do the "Automatic Color Calibration "(ACC) for the copier mode & printer mode as follows:
  - 1. Print the ACC test pattern (User Tools > Maintenance > ACC > Start).
  - 2. Put the printout on the exposure glass.
  - 3. Put 10 sheets of white paper on the test chart. This ensures the precise ACC adjustment.
  - 4. Close the ARDF or the platen cover.
  - 5. Press "Start Scanning" on the LCD. Then, the machine starts the ACC.
- 4. Exit the User Tools mode, and then enter the SP mode.
- 5. Do the "Forced line position adjustment" as follows.
  - 1. First do SP2-111-3 (Mode c).
  - 2. Then do SP2-111-1 (Mode a).
  - To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.
- 6. Exit the SP mode.

#### **Operation check**

Check if the sample image has been copied normally.

## **Maintenance Tables**

## Preventive Maintenance Tables

Chart: A4 (LT)/5%

# 3. Replacement and Adjustment

# Beforehand

# 

- Before installing options, please do the following:
  - 1. If there is a fax unit in the machine, print out all messages stored in the memory, the lists of user-programmed items, and the system parameter list.
  - 2. If there are printer jobs in the machine, print out all jobs in the printer buffer.
  - 3. Turn off the main switch and disconnect the power cord, the telephone line, and the network cable.

# **Special Tools**

Part Number	Description	Q'ty
B645 5010	SD Card	1
B645 6705	PCMCIA Card Adapter	1
B645 6820	USB Reader/Writer	1
VSSM9000	Digital Multimeter – FLUKE87	1
G021 9350	Loop-back Connector – Parallel * <b>NOTE</b>	1
C401 9503	20X Magnification Scope	1

Vote Note

 The "Loop-back Connector–Parallel" requires the "Plug-IEEE1284 Type C", and the optional IEEE1284 interface option must also be installed.

## Image Adjustment

## Scanning

Check the printing registration/side-to-side adjustment and the blank margin adjustment before you do the following scanner adjustments.

Vote Note

• Use a S-2-1 test chart to do the following adjustments.

Scanner sub-scan magnification

A: Sub-scan magnification

- 1. Put the test chart on the exposure glass. Then make a copy from one of the feed stations.
- 2. Check the magnification ratio. Adjust with SP4-008 if necessary. Standard: ±1.0%.

Scanner leading edge and side-to-side registration

A: Leading Edge Registration

- 1. Put the test chart on the exposure glass. Then make a copy from one of the feed stations.
- Check the leading edge and side-to-side registration. Adjust the following SP modes if necessary. Standard: 0 ± 2mm for the leading edge registration, 0 ± 2.5mm for the side-to-side registration.

	SP mode
Leading Edge Registration	SP4-010-001
Side-to-Side Registration	SP4-011-001

## ARDF

ARDF side-to-side, leading edge registration and trailing edge

A: Leading edge registration

Use A3/DLT paper to make a temporary test chart as shown above.

- 1. Put the temporary test chart on the ARDF. Then make a copy from one of the feed stations.
- Check the registration. Check the leading edge and side-to-side registration. Adjust the following SP modes if necessary. Standard: 4.2 ± 2 mm for the leading edge registration, 2 ± 1 mm for the side-to-side registration. Use the following SP modes to adjust if necessary.

SP Code	What It Does	Adjustment Range
SP6-006-001	Side-to-Side Registration	± 3.0 mm

SP6-006-003	Leading Edge Registration	± 5.0 mm
SP6-006-005	Buckle: Duplex Front	± 5.0 mm
SP6-006-006	Buckle: Duplex Rear	± 5.0 mm
SP6-006-007	Rear Edge Erase (Trailing Edge)	± 5.0 mm

## ARDF sub-scan magnification

- 1. Put the temporary test chart on the ARDF. Then make a copy from one of the feed stations.
- 2. Check the magnification ratio. Adjust with SP6-017-001 if necessary. Standard: ±1.0%

Reduction mode: ±1.0%

Enlargement mode: ±1.0%

## Registration

Image Area

A = C = 4.2mm (1.6"), B = 2.0mm

Make sure that the registration is adjusted within the adjustment standard range as shown below.

## Replacement and Adjustment

#### Leading Edge

Adjusts the leading edge registration for each paper type and process line speed.

#### Side to Side

Adjusts the side-to-side registration for each paper feed station. Use SP mode (SP1-002) to adjust the side-to-side registration for the optional paper feed unit, LCT, and duplex unit.

#### Adjustment Standard

- Leading edge (sub-scan direction): 4.2 ± 2 mm
- Side to side (main-scan direction): 2 ± 1 mm

## Paper Registration Standard

The registration in both main- and sub-scan directions can change within the following tolerance.

- Sub-scan direction: 0 ± 9 mm
- Main-scan direction: 0 ± 4 mm

## Adjustment Procedure

## 1. Enter SP2-109.

Print out the test pattern (14: 1-dot trimming pattern) with SP2-109.

🕁 Note

 Registration can change slightly as shown on the previous page. Print some pages of the 1-dot trimming pattern for step 3 and 4. Then average the leading edge and side-to-side registration values and adjust each SP mode.

## 3. Do the leading edge registration adjustment.

- 1. Check the leading edge registration and adjust it with SP1-001.
- 2. Select the adjustment conditions (paper type and process line speed).
- 3. Input the value. Then press the 🖱 key.
- 4. Generate a trim pattern to check the leading edge adjustment.

## 4. Do the side-to-side registration adjustment.

- 1. Check the side-to-side registration and adjust it with SP1-002.
- 2. Select the adjustment conditions (paper feed station).
- 3. Input the value. Then press the 🖱 key.
- 4. Generate a trim pattern to check the leading edge adjustment.

## Erase Margin Adjustment

#### Vote Note

 Adjust the erase margin C and D only if the registration (main scan and sub scan) cannot be adjusted within the standard values. Do the registration adjustment after adjusting the erase margin C and D, and then adjust the erase margin A and B.

- 1. Enter SP2-109.
- 2. Print out the test pattern (14: 1-dot trimming pattern) with SP2-109.
- Check the erase margin A and B. Adjust them with SP2-103 if necessary. Leading edge: 1.5 to 5.0 mm,
   Side-to-side:0.5 to 4.0 mm,
   Trailing edge: 0.5 to 0.6 mm

## **Color Registration**

## Line Position Adjustment

The automatic line position adjustment usually is done for a specified condition to get the best color prints.

Do the following if color registration shifts:

- Do "Auto Color Registration" as follows to do the forced line position adjustment.
  - 1. First do SP2-111-3.
  - 2. Then do SP2-111-1.

To check if SP 2-111-1 was successful, watch the screen during the process. A

message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.

- You should also do the line position adjustment at these times:
  - After you transport or move the machine (you should do the forced line position adjustment if you install the machine at the user location.) if the machine is pre-installed at the workshop and moved to the user location,
  - When you open the drum positioning plate
  - When you remove or replace the motors, clutches, and/or gears related to the drum/development/transfer sections
  - When you remove or replace the image transfer belt, image transfer belt unit or laser optical housing unit

## Printer Gamma Correction

## 🔸 Note

• The ACC is usually sufficient to adjust the color balance to get the best print output. You only need the printer gamma correction to fine-tune to meet user requirements.

Use SP modes if you want to modify the printer gamma curve created with ACC. You can adjust the gamma data for the following:

- Highlight
- Middle
- Shadow areas
- IDmax.

The adjustable range is from 0 to 30 (31 steps).

## Copy Mode

## - KCMY Color Balance Adjustment -

The adjustment uses only "Offset" values.

🔸 Note

Never change "Option" values (default value is 0).

Highlight (Low ID)	Levels 2 through 5 in the C4 chart 10-level scale
Middle (Middle ID)	Levels 3 through 7 in the C4 chart 10-level scale
Shadow (High ID)	Levels 6 through 9 in the C4 chart 10-level scale
ID max	Level 10 in the C4 chart 10-level scale (affects the entire image density.)

## Replacement and Adjustment

Offeet	The higher the number in the range associated with the low ID,
Offset	middle ID, high ID, and ID max, the greater the density.

There are four adjustable modes (can be adjusted with SP4-918-009):

- Copy Photo mode
- Copy Letter mode
- Copy Letter (Single Color) mode
- Copy Photo (Single Color) mode

## - Adjustment Procedure -

- 1. Copy the C-4 chart in the mode that you want to adjust.
- 2. Enter the SP mode.
- 3. Select "Copy SP."
- 4. Select SP4-918-009.
- 5. Adjust the offset values until the copy quality conforms to the standard () table below).

🔸 Note

- 1. Never change "Option" value (default value is 0).
- 2. Adjust the density in this order: "ID Max," "Middle," "Shadow," "Highlight."

- Photo Mode, Full Color -

	Item to Adjust	Level on the C-4 chart	Adjustment Standard
1	ID max: (K, C, M, and Y)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that the density of level 10 matches that of level 10 on the C-4 chart.
2	Middle (Middle ID) (K, C, M, and Y)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that the density of level 6 matches that of level 6 on the C-4 chart.
3	Shadow (High ID) (K, C, M, and Y)	1 2 3 4 5 6 7 8 9 10 <b>1</b>	Adjust the offset value so that the density of level 8 matches that of level 8 on the C-4 chart.
4	Highlight (Low ID) (K, C, M, and Y)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that dirty background does not show on the copy and the density of level 3 is slightly lighter than that of level 3 on the C-4 chart.
5	K Highlight (Low ID) (C,M, and Y) <on color<br="" full="" the="">copy&gt;</on>	12345678910 <b>1</b>	Adjust the offset value so that the color balance of black scale levels 3 through 5 in the copy is seen as gray (no C, M, or Y should be visible). If the black scale contains C, M, or Y, do steps 1 to 4 again.

## - Photo Mode, Single Color -

	Item to Adjust	Level on the C-4 chart	Adjustment Standard
1	ID max: (K)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that the density of level 10 matches that of level 10 on the C-4 chart.
2	Middle (Middle ID) (K)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that the density of level 6 matches that of level 6 on the C-4 chart.
3	Shadow (High ID) (K)	1 2 3 4 5 6 7 8 9 10 <b>1</b>	Adjust the offset value so that the density of level 8 matches that of level 8 on the C-4 chart.
4	Highlight (Low ID) (K)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that dirty background does not show on the copy and the density of level 3 is slightly lighter than that of level 3 on the C-4 chart.

## - Text (Letter) Mode, Full Color -

	Item to Adjust	Level on the C-4 chart (K)	Adjustment Standard
1	ID max: (K, C, M, and Y)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that the density of level 10 matches that of level 10 on the C-4 chart.
2	Middle (Middle ID) (K, C, M, and Y)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that the density of level 6 matches that of level 6 on the C-4 chart.

Replacement and Adjustment

3	Shadow (High ID) (K, C, M, and Y)	1 2 3 4 5 6 7 8 9 10 <b>1</b>	Adjust the offset value so that the density of level 8 matches that of level 8 on the C-4 chart.
4	Highlight (Low ID) (K, C, M, and Y)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that dirty background does not show on the copy and the density of level 3 is slightly lighter than that of level 3 on the C-4 chart.

## - Text (Letter) Mode, Single Color -

	Item to Adjust	Level on the C-4 chart (K)	Adjustment Standard
1	ID max: (K)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that the density of level 10 matches that of level 10 on the C-4 chart.
2	Middle (Middle ID) (K)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that the density of level 6 matches that of level 6 on the C-4 chart.
3	Shadow (High ID) (K)	1 2 3 4 5 6 7 8 9 10 <b>1</b>	Adjust the offset value so that the density of level 8 matches that of level 8 on the C-4 chart.
4	Highlight (Low ID) (K)	1 2 3 4 5 6 7 8 9 10	Adjust the offset value so that dirty background does not show on the copy and the density of level 3 is slightly lighter than that of level 3 on the C-4 chart.

🔸 Note

 Text parts of the test pattern cannot be printed clearly after you adjust "shadow" as shown above. At this time, check if the 5 line/mm pattern at each corner is printed clearly. If it is not, adjust the offset value of "shadow" again until it is.

## Printer Mode

There are six adjustable modes (select these modes with printer SP1-102-001):

- 2400 x 600 photo mode
- 2400 x 600 text mode
- 1800 x 600 photo mode
- 1800 x 600 text mode
- 600 x 600 photo mode
- 600 x 600 text mode

	к	С	М	Y
Highlight	SP1-104-1	SP1-104-21	SP1-104-41	SP1-104-61
Shadow	SP1-104-2	SP1-104-22	SP1-104-42	SP1-104-62
Middle	SP1-104-3	SP1-104-23	SP1-104-43	SP1-104-63
IDmax	SP1-104-4	SP1-104-24	SP1-104-44	SP1-104-64

## - Adjustment Procedure -

- 1. Do ACC for the printer mode.
- 2. Turn the main power off and on.
- 3. Enter SP mode.
- 4. Select "Printer SP".
- 5. Select SP1-102-001. Then select the necessary print mode to adjust.
- 6. Choose SP1-103-1 to print out a tone control test sheet if you want to examine the image quality for these settings.
- 7. Adjust the color density with SP1-104 as shown following table lists. Compare the tone control test sheet with the C4 test chart.

🔸 Note

- Adjust the density in this order: "ID Max", "Shadow", "Middle", "Highlight".
- 8. Use SP1-105-001 to keep the adjusted settings.

# **Exterior Covers**

## Front Door

1. Open the front door [A].

2. Remove the two pins [B], and then remove the front cover.

## Left Cover

1. Left cover [A] ( 🕅 x 6)

Rear Cover

1. Rear cover [A] ( 🖗 x 7)

## **Right Rear Cover**

- 1. Rear cover [A] ( X 7)
- 2. Open the right door [B].
- 3. Right rear cover [C] ( x 1)

## **Operation Panel**

- 1. Top left front cover [A] ( x 2)
- 2. Open the right door.
- 3. Front right cover [B] ( x 1)
- 4. Top front cover [C] ( x 2)
- 5. Operation panel [D] ( x 2, 💷 x 1)

## Replacement and Adjustment

## Dust Filter

- 1. Dust filter cover [A]
- 2. Two dust filters [B]

# Scanner Unit

## Exposure Glass

- 1. Glass cover [A] (Px 4)
- 2. ARDF exposure glass [B]
- 3. Rear scale [C] ( x 3)
- 4. Exposure glass with left scale [D]

Vote Note

 Position the white marker [E] at the rear-left corner and the blue marker at the front-left corner when you reattach the ARDF exposure glass.

## Original Length/Width Sensors

- 1. Exposure glass with left scale ( "Scanner Unit")
- 2. Original length sensor bracket [A] ( x 1, A x1)
- 3. Original length sensors [B] (snap, 💷 x 1 each)
- 4. The number of the original length sensors depends on the model; 3 for EU, 2 for others.
- 5. Original width sensors [C] (snap,  $\mathscr{F} \ge 1$ , 🗊  $\ge 1$  each)

Exposure Lamp

- 1. Rear cover ( "Rear Cover")
- 2. Operation panel ( "Operational Panel")
- 3. Exposure glass (IF "Exposure Glass")
- 4. Scanner rear cover [A] ( X 1)
- 5. Scanner left cover [B] ( x 2)
- 6. Scanner right cover [C] ( x 2)

- 7. Operation panel bottom cover [D]
- 8. Operation panel support brackets [E] ( x 2 each)
- 9. Scanner left stay [F] ( x 2)
- 10. Scanner front frame [G] ( x 6)

- 11. Scanner rear frame [H] ( 🖗 x 9, 📫 x 1)
- 12. Disconnect the exposure lamp cable [I] from the lamp stabilizer ( $\stackrel{\frown}{\boxminus}$  x 2).

- 13. Release the clamp [J] (  $\widehat{\mathscr{P}}\,$  x 1).
- 14. Remove the pulley [K].
- 15. Hold down the snap [L], and then slide the exposure lamp [M] to the front side.
- 16. Exposure lamp [M]

Reassembling

Run the cable so there is no slack. Slide the clamp [A] to adjust the cable slack.

## Scanner Motor

- 1. Rear cover ( Rear Cover ")
- 2. Scanner motor assembly [A] ( x 2, 💷 x 1, spring x 1)
- 3. Scanner motor [B] ( x 2)

Sensor Board Unit (SBU)

- 1. Exposure glass ( Transmission Contemporation Contemporatio Contemporation Contemporation Contemporation Contemporation Cont
- 2. SBU cover bracket [A] ( x 9)
- 3. Original length sensor bracket [B] ( x 1, 🛱 x 1)

4. Sensor board unit [C] ( x 5, 💷 x 2, 🛱 x 2)

## When reassembling

Adjust the following SP modes after you replace the sensor board unit:

- SP4-008 (Sub Scan Mag): See "Image Adjustment: Scanning".
- SP4–010 (Sub Mag Reg.): See "Image Adjustment: Scanning".
- SP4–011 (Main Scan Reg): See "Image Adjustment: Scanning".
- SP4–688 (DF: Density Adjustment): Use this to adjust the density level if the ID of outputs made in the DF and Platen mode is different.

## Exposure Lamp Stabilizer

- 1. Rear cover ( "Rear Cover")
- 2. Exposure lamp stabilizer [A] ( x 2, 💷 x 2)

## Front Scanner Wire

- 1. Exposure glass ( Exposure Glass'')
- 2. Front frame (IF "Exposure Lamp")
- 3. Front scanner wire clamp [A]
- 4. Front scanner wire bracket [B] ( x 1)
- 5. Front scanner wire and scanner drive pulley [C] ( x 1)

Reinstalling the Front Scanner Wire

- 1. Position the center ball [A] in the middle of the forked holder.
- 2. Pass the right end (with the ball) [B] through the square hole. Pass the left end (with the ring) [C] through the notch.
- 3. Wind the right end counterclockwise (shown from the machine's front) five times. Wind the left end clockwise twice.

🔸 Note

 The two red marks [D] come together when you have done this. Stick the wire to the pulley with tape. This lets you easily handle the assembly at the time of installation.

4. Install the drive pulley on the shaft [E].

V Note

- Do not attach the pulley to the shaft with the screw at this time.
- 5. Insert the left end into the slit [F]. The end should go via the rear track of the left pulley [G] and the rear track of the movable pulley [H].

6. Hook the right end onto the front scanner wire bracket [I]. The end should go via

# the front track of the right pulley [J] and the front track of the movable pulley [K].

Do not attach the scanner wire bracket with the screw at this time.

- 7. Remove the tape from the drive pulley.
- 8. Insert a scanner-positioning pin [L] through the 2nd carriage hole [M] and the left holes [N] in the front rail. Insert another scanner positioning pin [O] through the 1st carriage hole [P] and the right holes in the front rail [Q].
- 9. Insert two more scanner positioning pins through the holes in the rear rail.
- 10. Screw the drive pulley to the shaft [R].
- 11. Screw the scanner wire bracket to the front rail [S].
- 12. Install the scanner wire clamp [T].
- 13. Pull out the positioning pins.

🔸 Note

 Make sure the 1st and 2nd carriages move smoothly after you remove the positioning pins. Do steps 8 through 13 again if they do not.

## **Rear Scanner Wire**

Reinstalling the Rear Scanner Wire

- 1. Position the center ball [A] in the middle of the forked holder.
- 2. Pass the left end (with the ball) [B] through the drive pulley notch. Pass the right end (with the ring) [C] through the drive pulley hole.
- 3. Wind the left end [B] clockwise (shown from the machine's front) five times. Wind the right end [C] counterclockwise three times.

🔸 Note

- The two red marks [D] come together when you do this. Attach the wire to the pulley with tape. This lets you easily handle the assembly at the time of installation.
- 4. Install the drive pulley on the shaft.

🔸 Note

- Do not attach the pulley on the shaft with the screw at this time.
- 5. Install the wire.

🔸 Note

 The winding of the wire on the three pulleys at the rear of the scanner should be the same as the winding on the three pulleys at the front. This must show as a mirror image.

Example: At the front of the machine, the side of the drive pulley with the three windings must face the front of the machine. At the rear of the machine, it must face the rear.

6. Do steps 7 through 13 again in the "" Section.

## **Touch Panel Position Adjustment**

🕹 Note

- It is necessary to calibrate touch panel at the following times:
- When you replace the operation panel.
- When you replace the controller board.
- When the touch panel detection function does not operate correctly

Do not use items [2] to [9] on the Self-Diagnostic Menu. These items are for design use only.

1. Press 1, press 1993, press 5 times to open the Self-Diagnostics menu.

Self Diagnostic Menu	
[1] Touch Screen Adjust	[6] Touch Screen Test
[2] LED Test	[7] Rom Checksum Test
[3] Hard Key Test	
[4] Buzzer Test	
[5] LCD Test	[./*] Next [#] Exit

- 2. On the touch screen press "Touch Screen Adjust" (or press  $\bigcirc$ ).
- 3. Use a pointed (not sharp) tool to press the upper left mark  $\degree_{\kappa}$ .

- 4. Press the lower right mark when " $^{\circ}_{\kappa}$ " shows.
- 5. Touch a few spots on the touch panel to make sure that the marker "+" shows exactly where the screen is touched.
- 6. Press Cancel. Then start from Step 2 again if the "+" mark does not show where the screen is touched.
- 7. Press [#] OK on the screen (or press (\*)) when you are finished.
- 8. Touch [#] Exit on the screen to close the Self-Diagnostic menu. Save the calibration settings.

## Laser Optics

# \Lambda WARNING

 Turn off the main switch and unplug the machine before beginning any of the procedures in this section. Laser beams can cause serious eye injury.

Caution Decal Location

Caution decals are placed as shown below.

# **WARNING**

 Be sure to turn off the main switch and disconnect the power plug from the power outlet before beginning any disassembly or adjustment of the laser unit. This copier uses a class IIIb laser beam with a wavelength of 655 nm and an output of 7 mW. The laser can cause serious eye injury.

Laser Optics Housing Unit

# 

 Before installing a new laser optics housing unit, remove the sponge padding and the tag from the new unit.

🕹 Note

A new laser optics housing unit has a bracket to protect the LD units. When you replace the laser optics housing unit, use caution.

Preparing the new laser optics housing unit

1. Shutter [A] of the laser optics housing unit ( x 3)

- 2. Polygon motor cover [B] of the laser optics housing unit ( x 4)
- 3. Sponge padding [C]
- 4. Tag [D]
- 5. Reinstall the polygon motor cover [B].

Before removing the old laser optics housing unit

Do the following settings before removing the laser optics housing unit. These are adjustments for skew adjustment motors in the laser optics housing unit.

- 1. Plug in and turn on the main power switch of the copier.
- 2. Enter the SP mode.
- 3. Execute SP9511-001 to clear the WTL positioning motor setting for Magenta.
- 4. Execute SP9511-002 to clear the WTL positioning motor setting for Cyan.
- 5. Execute SP9511-003 to clear the WTL positioning motor setting for Yellow.

6. Exit the SP mode.

E

7. Turn off the main power switch and disconnect the power cord of the copier.

Recovery procedure for SC285 and no replacement preparation of laser optics housing unit

If <u>SC285 occurs or</u> you did not do the procedure in 'Before removing the old laser optics housing' before removing the old laser optics housing unit, you must do the following.

- 1. Turn off the main power switch and disconnect the power cord of the copier.
- 2. Remove the left cover and harness cover bracket (see the following "Removing the old laser optics housing unit")

- 3. Disconnect the harness [A] of the skew correction motor.
- 4. Do steps 1 to 7 of "Before removing the old laser optics housing unit".
- 5. Connect the harness [A] and reinstall the harness bracket and left cover.
- 6. Plug in and turn on the main power switch.

Removing the old laser optics housing unit

1. Left cover [A] ( X 6)

2. Harness cover bracket [B] ( x 4).

- 3. Rear fan bracket [C] for the laser housing optics unit ( x 3, 💷 x 7)
- 4. Front fan bracket [D] for the laser housing optics unit ( $\mathscr{F} \ge 2$ )

5. Remove the old laser optics housing unit [E] ( $\mathscr{F} \ge 2$ ,  $\mathfrak{P} \ge 2$ )

Installing a new Laser Optics Housing Unit

🕹 Note

A new laser optics housing unit has a bracket to protect the LD units. When you replace the laser optics housing unit, use caution.

- Push the new laser optics housing unit [A] slowly into the copier until the bracket
   [B] bumps against the frame of the copier.
- 2. Remove the bracket [B], and then push the new laser optics housing unit fully into the copier ( x 2, All x <sup>□</sup>).
- 3. Reassemble the machine.

After installing the new laser optics housing unit

Do the following adjustment after installing the new laser optics housing unit.

1. Plug in and turn on the main power switch.

2. Adjust the main scan magnification only for black (Bk).

1. Input the standard value [A] provided with a new laser optics housing unit for the main scan magnification adjustment with SP2-185-001.

🔸 Note

- The value [A] is different for each laser optics housing unit.
- 2. Print the test pattern (14: 1-dot trimming pattern in the SP2-109-003).
- 3. Check that the left and right trim margin is within  $4 \pm 1$  mm. If not, change the standard value for the main scan magnification adjustment.

## 3. Adjust the main scan registration only for the black (Bk).

1. Input the registration value [B] provided with a new laser optics housing unit for the main scan registration adjustment with SP2101-001.

Vote Note

- The value [B] is different for each laser optics housing unit.
- 2. Print the test pattern (14: 1-dot trimming pattern in the SP2-109-003).
- 3. Check that the left trim margin is within  $2 \pm 1$  mm. If not, change the registration value for the main scan registration adjustment.
- 4. Select "0" with SP2-109-003 after printing the "1-dot trimming pattern.

## 5. Do the line position adjustment.

- 1. First do SP2-111-3.
- 2. Then do SP2-111-1.

To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.

6. Exit the SP mode.

## Polygon Mirror Motor

- 1. Laser optics housing unit ( "Laser Optics Housing Unit")
- 2. Shutter [A] of the laser housing optics unit ( x 3)

- 3. Polygon mirror motor cover [B] of the laser optics housing unit ( $\mathscr{F} \times 4$ )
- 4. Polygon mirror motor holder [C] ( $\mathscr{F} \times 2$ )
- 5. Polygon mirror motor [D] ( x 4, 💷 x 1)

After installing the laser optics housing unit:

- 1. Do the "Forced Line Position Adj. Mode c" (SP2-111-3).
- 2. Then do the "Forced Line Position Adj. Mode a" (SP2-111-1).

To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.

# Image Creation

## PCU

Vote Note

Do not touch the OPC drum. Do not let metal objects touch the development sleeve.

- 1. Open the front door.
- 2. Lever lock [A] ( X 1)
- 3. Turn the release lever [B] and the image transfer unit contact lever [C] counter-clockwise.
- 4. Open the drum positioning plate [D].

5. Pull out the PCU (hold the grip while you pull it out) [E].

## Drum Unit and Development Unit

The new drum unit has a front cover and a front joint. When you attach the new drum unit to the development unit, remove a front cover and a front joint at first.

And use them for reassembling the new drum unit and development unit.

## 1. If you install a new drum unit, set SP 3902-xxx to "1".

Black: 3902-009 Yellow: 3902-010 Cyan: 3902-011 Magenta: 3902-012

Vote Note

 If you do this, then the machine will reset the PM counter for the drum unit automatically, after you turn the power on again.

- 2. Turn the machine power off.
- 3. PCU ( PCU'')
- 4. Front cover [A] ( x 2)

🔸 Note

 Do not touch the bearing [B] after removing the front cover. The bearing is properly applied with lubricant.

5. Remove the bushing [C] of the development roller at the rear of the PCU ( $\ensuremath{\mathbb{C}}$  x 1).

6. Remove the front joint [D] ( $\mathscr{F} \ge 1$ ,  $\mathfrak{P} \ge 1$ ).

V Note

 The front joint [D] is firmly set. Remove it with a watchmaker's or jeweller's screwdriver.

7. Drum unit [E] and Development Unit [F]

🔸 Note

- When the development unit is removed from the drum unit, clean the entrance mylar [G] with a vacuum.
- 8. If you change the development unit, do the ACC procedure.

Developer

- Set SP 3902-xxx to "1". Black: 3902-005 Yellow: 3902-006 Cyan: 3902-007 Magenta: 3902-008
- 2. Turn the machine power off.
- 3. Development unit ( "Drum Unit and Development Unit")
- 4. Hopper cover [A] (hook x 3)

- 5. Shake a bag of developer and pour it into the development hopper [B].
- 6. Reattach the hopper cover (hook x 3)

- Turn the machine power on. The machine initializes the developer and resets the PM counter for the developer. (For details of the developer initialization result, see "Developer Initialization Result" in the "Troubleshooting" chapter.
- 8. Do the ACC procedure.

#### Toner Collection Bottle

If you will install a new bottle, and the old bottle is not in a full or near-full condition, then set SP 3902-017 to 1.

🔸 Note

- If you do this, then the machine will reset the PM counter for the bottle automatically, after you turn the power on again.
- If the bottle is in a full or near-full condition, it is not necessary to do this.

- 1. Turn off the main power switch.
- 2. Open the front door and remove the screw [A].
- 3. Close the front door.
- 4. Pull out tray 1 [B].
- 5. Open the toner collection bottle door [C].
- 6. Pull out the toner collection bottle [D].

🔸 Note

 Remove the cap [E], and then attach the cap on the opening of the toner collection bottle before taking it out.

#### Toner Supply Tube Fan

- 1. Rear cover ( Rear Cover ")
- 2. High voltage supply board bracket (IF "High Voltage Supply Board Bracket")
- 3. Toner supply tube fan duct [A] ( x 3, 💷 x 1, 🛱 x 1)
- 4. Split the fan duct (4 hooks).
- 5. Toner supply tube fan [B]

When reinstalling the toner supply tube fan

Make sure that the toner supply tube fan is installed with its decal facing to the rear of the machine.

#### **Toner Pump Unit**

There are four pump units inside the machine. This procedure describes the replacement procedure only for one unit. If you need to replace another unit, do the same as this procedure.

Vote 🗸

 Put some sheets of paper on the floor before doing this procedure. Toner may fall on the floor.

#### Replacement and Adjustment

- 1. Front door ( Rear Cover'')
- 2. Image transfer belt unit ( "Image Transfer Belt")
- 3. All PCUs (MP "PCU")
- 4. Put a sheet of paper (A3/DLT) inside the machine as shown and on the floor.
  - The sheet of paper on the floor is used in a later step.

5. Release the harness [A] from the clamp (🛱 x 1 for YCM, 🛱 x 3 for K) and hook, and then disconnect the harness.

🔸 Note

- Avoid touching these spring terminals [B].
- 6. Release the toner supply tube [C].

#### Replacement and Adjustment

7. Remove the toner pump unit [D] ( $\mathscr{F} \times 2$ )

Make sure that a sheet of paper is attached to the frame of the rear side and covers the four gears. The picture on the left shows a sheet of paper that is correctly set, but the picture on the right shows a sheet of paper that is not correctly set. This sheet of paper prevents toner and screws from falling into the laser optics housing unit through cutouts.

8. Slowly remove the toner supply tube [E] from the toner pump unit by pulling the tube right and left.

# 9. Turn up the openings of the toner pump unit and toner supply tube just after removing the tube.

🔸 Note

• If not, the toner may scatter away and fall down.

10. Put the toner pump unit on the sheet of paper, which has been put in step 4, with its opening [F] up.

11. Keep the opening [G] of the toner supply tube up, and then clip the opening of the toner supply.

When you install the new toner pump unit

Before installing the new toner pump unit, mask the opening of the old toner pump unit with tape. Dispose of it following local rules.

#### Replacement and Adjustment

- 1. Put a sheet of paper (A3/DLT) inside the machine.
- 2. Turn up the opening of the toner supply tube, and then remove the object that was used to clip the opening of the toner supply tube.
- 3. Insert the opening of the toner pump unit [A] into the opening of the toner supply tube [B] as far as possible.

4. Connect the harness [C] to the connector of the machine.

Vote Note

- On the above picture, the magnified picture of the connector shows the easiest way to connect it.
- 5. Clamp the harness [C] ( $\bigcirc$  x 1 for YCM,  $\bigcirc$  x 3 for K).

Vote Note

Avoid touching these spring terminals [D].

- 6. Pass the harness of the toner pump unit behind the hook [E], while pressing at [F].
- 7. Secure the toner supply tube with the holder [G], lifting up the edge of the holder "very gently".

🔸 Note

 Be careful when you lift the edge of the holder, because the holder is easily broken.

8. Insert the toner pump unit [H] into the rear frame of the machine ( $\mathscr{F} \times 2$ ).

### Toner End Sensor

- 1. Rear cover ( Rear Cover ")
- 2. Controller box ( Controller Box")
- 3. Toner end sensor [A] ( x 1, 2 hooks each)

# Image Transfer

### Image Transfer Belt Unit

- 1. Open the right door.
- 2. Open the front door
- 3. Open the drum positioning plate. (MPP PCU)
- 4. Turn the image transfer belt unit lock lever [A] counterclockwise.
- 5. Pull out the image transfer belt unit [B] halfway.

6. Grasp the handles [C], and then pull out the image transfer belt unit fully.

#### Image Transfer Belt Cleaning Unit

- If you will install a new belt cleaning unit, then set SP 3902-015 to 1.
   Note
  - If you do this, then the machine will reset the PM counter for the belt cleaning unit automatically, after you turn the power on again.
     Do not use SP3902-015 or 013 if you replace the complete ITB unit.
- 2. Turn off the main power switch.
- 3. Open the right door.
- 4. Open the front door
- 5. Open the drum positioning plate. (MPP PCU)
- 6. Loosen the screw [A].
- 7. Turn the lock lever [B] clockwise
- 8. Pull out the image transfer belt cleaning unit [C].

#### Image Transfer Belt

- 1. Image transfer belt cleaning unit ( "Image Transfer Belt Cleaning Unit")
- 2. Image transfer belt unit ( PCU)
- 3. Turn the image transfer unit contact lover [A] counterclockwise (as seen from the rear).
- 4. Gear [B] (hook x 1)
- 5. Turn the gear cover [C] clockwise (as seen from the rear) ( $\Re x$  1).

6. Image transfer belt unit top cover [D] ( $\mathscr{F} \times 6$ ).

7. Three stays [E] ( x 6)

8. Guide plate [F] (as seen from the right side of the machine) ( $\mathscr{F} \ge 2$ )

9. Remove the two screws and then rear hold bracket [G] (as seen from the rear).

10. Remove the two screws and then front hold bracket [H] (as seen from the front).

11. Put the front side of the image transfer belt unit on a corner of the table or a box as shown.

12. Pull the tension roller [I] as shown.

#### 13. Image transfer belt [J]

When reinstalling the image transfer belt

• Clean all rollers with dry cloth before installing the image transfer belt.

the image transfer belt.

#### Replacement and Adjustment

This belt must be installed the correct way around. When you reinstall the image transfer belt unit, install it with the painted number [D] on the belt at the rear side of the unit.

 Put "Lubricant Powder" (B132 9700) on the surface of the image transfer belt [A], while you turn the drive gear [B] at a constant speed, as shown. (The straight arrow in the picture shows belt movement direction.) Lubricant powder prevents the image transfer cleaning blade from turning up.

🔸 Note

 Do not put the lubricant powder at the right side of the image transfer belt unit (the above picture is taken from the rear). Otherwise, lubricant powder may damage the encoder sensor.

# Paper Transfer

#### Paper Transfer Roller Unit

If you will install a new paper transfer unit, then set SP 3902-016 to 1.

🔸 Note

 If you do this, then the machine will reset the PM counter for the paper transfer unit automatically, after you turn the power on again.

- 1. Open the right door.
- 2. Release the two locks [A].
- 3. Paper transfer roller unit [B]

### Paper Transfer Unit

If you will install a new paper transfer unit, then set SP 3902-016 to 1.

🔸 Note

- If you do this, then the machine will reset the PM counter for the paper transfer unit automatically, after you turn the power on again.
- 1. Turn off the main power switch.

#### Replacement and Adjustment

- 2. Open the right door.
- 3. Remove the clip ring [A].
- 4. Move the vertical transport unit to the left side with lever "Z" [B].

- 5. Remove the pin [C], and then remove the harness cover [D].
- 6. You do not need to remove the pin bushing [E] from the harness cover.

7. Disconnect the connector [F] and release the clamp [G].

8. Remove the bushing [H] ( $\mathscr{F} \times 1$ ).

9. Slide up the paper transfer unit [I], and then remove it.

### ID Sensor Board

- 1. K PCU ( TPCU'')
- 2. Rear cover ( Rear Cover'')
- 3. Right rear cover ( "Right Rear Cover")
- 4. Duplex unit ( "Duplex Unit")
- 5. Fusing unit ( "Fusing Unit")
- 6. Image transfer belt unit ( "Image Transfer Belt Unit")
- 7. ID sensor unit [A] ( 🖗 x 2, 💷 x 2, 🚔 x 1)
- 8. ID sensor board [B] ( x 6)

#### Cleaning for ID sensors

ID sensors require a cleaning procedure every 320K. Do the following steps for ID sensor cleaning.

- 1. K PCU ( "PCU")
- 2. Fusing unit (IF "Fusing Unit")
- 3. Image transfer belt unit (IT "Image Transfer Belt Unit")
- 4. Slide the ID sensor shutter [A] to the left side.
- 5. Clean the ID sensors keeping the ID sensor shutter to the left.

#### After installing a new ID sensor unit/board

Do the following adjustment after installing a new ID sensor unit/board.

- 1. Plug in and turn on the main power switch of the copier.
- 2. Enter the SP mode.
- 3. Input all correction coefficients [A] for the ID sensor with the SP modes referring to the barcode sheet provided with the new ID sensor unit/board.

🔸 Note

- For example, input "1.00" with SP3-362-013.
- 4. Exit the SP mode.

# Drive Unit

The drawing above shows the drive unit layout.

1. Fusing/paper exit motor	7. Paper feed clutch – Tray 1	
2. ITB drive motor	8. Drum/Development drive motor-K	
3. Paper transfer contact motor	9. Development drive motor-CMY	
4. Registration motor	10. Toner transport motor	
5. Paper feed motor	11. Image transfer belt contact motor	
6. Paper feed clutch – Tray 2	12. Drum drive motor-CMY	

There are some motors and clutches, which are not shown in the above drawing:

•	Tray lift motor 1 and 2	•	Shutter motor
-	Duplex inverter motor		
•	Duplex/By-pass Motor	•	Development clutch

#### Replacement and Adjustment

#### Drive Unit Fan

- 1. Rear cover ( "Rear Cover")
- 2. Right rear cover ( "Right Rear Cover")
- 3. High voltage supply board bracket (IFT "High Voltage Supply Board Bracket")
- 4. Remove the drive unit fan [A] ( X 1, 💷 x 1, hook x 2)

When installing the drive unit fan

Make sure that the drive unit fan is installed with its decal facing to the right side.

#### Gear Unit

Vote Note

- Do not remove the drum motor-MCY from the gear unit. It is not easy in the field to adjust the gear position between the drum motor MCY and the gear unit.
- 1. Rear cover ( Rear Cover'')
- 2. High voltage supply board bracket (IF "High Voltage Supply Board Bracket")
- 3. Controller box ( Controller Box")
- 4. Toner supply tube fan duct (IF "Toner Supply Tube Fan")

#### Replacement and Adjustment

- 5. Release the four hooks of the duct from the frame.
- 6. Remove the drive unit fan duct [A] ( $\mathscr{F} \ge 1$ ,  $\mathfrak{P} \ge 1$ ,  $\mathfrak{P} \ge 1$ ).
- 7. PSU bracket (IF "PSU")
- 8. IOB bracket ( "IOB")
- 9. Drum/development motor-K (IP "Drum/Development Motor-K")
- 10. Image transfer belt contact motor( "Image Transfer Belt Contact Motor")
- 11. Toner transport motor (IFT "Toner Transport Motor")
- 12. Open the front door and right door.
- 13. Open the drum positioning plate.
- 14. Pull the image transfer belt unit a little (IFF "Image Transfer Belt Unit").
- 15. Pull the four PCUs a little ( "PCU").

- 16. Release all the clamps on the rear side of the gear unit ( $\bigcirc$  x 11).
- 17. Release all the clamps [B] on the top of the gear unit ( $\stackrel{\frown}{\boxminus}$  x 4).

18. Disconnect all the connectors ( 12 x 12).

19. Gear unit [C] ( X 7, timing belt x 1)

#### **Registration Motor**

- 1. Rear cover ( Rear Cover ")
- 2. High voltage supply board bracket (IFF "High Voltage Supply Board Bracket")
- 3. Drum/development motor-K ( Trum/Development Motor-K'')
- 4. Registration motor bracket [A] ( x 3, 💷 x 1, 🛱 x 2, timing belt x 1)
- 5. Remove the registration motor from the bracket ( $\Re x 2$ ).

#### Paper Feed Motor

- 1. Rear cover ( Rear Cover ")
- 2. High voltage supply board bracket (IF "High Voltage Supply Board Bracket")
- 3. PSU bracket ( PSU")
- 4. Right rear cover ( "Right Rear Cover")
- 5. Paper feed clutch 1 and 2 ( "Paper Feed Clutches")

6. Paper feed motor bracket [A] ( x 5, 💷 x 1, 🛱 x 3)

7. Paper feed motor [B] ( $\mathscr{F} \times 2$ , timing belt x 1)

Drum/Development Motor-K

- 1. Rear cover ( Rear Cover ")
- 2. High voltage supply board bracket (IFF "High Voltage Supply Board Bracket")
- 3. Drum/Development motor-K [A] ( 🖗 x 4, 📫 x 1)

#### **ITB** Drive Motor

- 1. Rear cover ( Rear Cover ")
- 2. High voltage supply board bracket (IF "High Voltage Supply Board Bracket")
- 3. ITB drive motor [A] ( 🖉 x 4, 💷 x 1)

Fusing/Paper Exit Motor

- 1. Rear cover ( Rear Cover ")
- 2. High voltage supply board bracket (IFF "High Voltage Supply Board Bracket")
- 3. Toner supply tube fan duct [A] ( 🖉 x 3, 📫 x 1, 🛱 x 1)
- 4. Fusing/paper exit motor [B] ( x 4, 💷 x 1)

Image Transfer Belt Contact Motor

- 1. Rear cover ( Rear Cover ")
- 2. Open the controller box. (IF "Controller Box")
- 3. Transfer belt contact motor [A] ( x 2, 💷 x 1, 🛱 x 1)

Paper Transfer Contact Motor

- 1. Rear cover ( Rear Cover'')
- 2. High voltage supply board bracket (IF "High Voltage Supply Board Bracket")
- 3. Right rear cover ( "Right Rear Cover")
- 4. Paper transfer contact motor [A] ( x 2, 💷 x 1)

#### **Duplex Inverter Motor**

- 1. Rear cover (IFT "Rear Cover")
- 2. High voltage supply board bracket (IFF "High Voltage Supply Board Bracket")
- 3. Toner supply tube fan duct [A] ( x 3, 💷 x 1, 🛱 x 1)
- 4. Duplex inverter motor [B] ( 🕅 x 2, 💷 x 1, 🚔 x 1)

Toner Transport Motor

- 1. Rear cover ( "Rear Cover")
- 2. Controller box ( Controller Box")
- 3. Toner transport motor [A] ( x 3, 💷 x 1)

### **Toner Collection Unit**

- 1. Gear unit ( "Gear Unit")
- 2. Toner collection unit [A] ( x 6, 💷 x 3)

# Paper Feed Clutches

- 1. Rear cover ( Rear Cover'')
- 2. High voltage supply board bracket (IF "High Voltage Supply Board Bracket")
- 3. PSU bracket (IF "PSU")
- 4. Paper feed clutch 1 bracket [A] ( x 2, 🖏 x 1, bushing x 1)

21-Apr-2006

### Replacement and Adjustment

5. Paper feed clutch 1 [B] (🕬 x 1, 🛱 x 1)

- 6. Paper feed clutch 2 bracket [C] ( x 2, 🖏 x 1, bushing x 1)
- 7. Paper feed clutch 2 (💷 x 1, 🚊 x 1)

### Drum Motor-MCY

<mark>√ N</mark>ote ■ D

Do not remove the PCUs when you replace the drum motor-MCY.

- 1. Rear cover ( Rear Cover ")
- 2. Open the controller box. (IF "Controller Box")
- 3. Drum motor-MCY [A] ( 🖉 x 4, 💷 x 1)

**Development Motor-MCY** 

- 1. Rear cover ( Rear Cover'')
- 2. PSU bracket (IF "PSU")
- 3. Open the controller box. (IF "Controller Box").
- 4. Development motor-MCY [A] ( x 4, 💷 x 1)

# Development Clutch-K

- 1. Rear cover ( Rear Cover ")
- 2. Open the controller box. (IF "Controller Box").
- 3. Development clutch-K [A] ( 🖉 x 2, 💷 x 1, 🛱 x 1)

# Fusing

Fusing Unit

# 

• Turn off the main switch and wait until the fusing unit cools down before beginning any of the procedures in this section. The fusing unit can cause serious burns.

1. If you will install a lot of new parts in the fusing unit (at PM for example), then set SP 3902-014 to "1".

Vote Note

 If you do this, then the machine will reset the PM counter for the fusing unit automatically, after you turn the power on again.

Do not do this if you replace the complete fusing unit. This is because the fusing unit has a new detection mechanism.

- 2. Turn off the main power switch.
- 3. Open the right door.
- 4. Release the lock levers [A].
- 5. Fusing unit [B]

# Fusing Belt, Pressure Roller, Fusing Lamps

- 1. Fusing unit ( "Fusing Unit")
- 2. Fusing upper cover [A] ( $\widehat{\mathscr{F}} \times 4$ )

3. Cleaning unit [B] ( x 2)

4. Lock lever front and rear [C] (snap ring x 1 each)

5. Top frame [D] ( 🖗 x 4, 📫 x 1)

6. Front side stay [E] ( X 2)

7. Release the pressure roller lamp cord [F] ( $\mathscr{F}$  x 1).

🔸 Note

- The color of the fusing lamp cord differs depending on the destination.
- Red: 220 240 V, Blue: 120 V
- 8. Rear side stay [G] ( x 2)

### Replacement and Adjustment

- 9. Heating roller fusing lamp front stay [H] ( $\mathscr{F}$  x 1)
- 10. Pressure roller lamp front stay [I] ( x 1)

- 11. Heating roller fusing lamp rear stay [J] ( $\mathscr{F} \ge 1$ )
- 12. Pressure roller fusing lamp rear stay [K] ( \* x 1)

- 13. Heating roller fusing lamp assembly [L] ( $\mathscr{F} \ge 4$ )
- 14. Pressure roller fusing lamp [M] ( x 1)

21-Apr-2006

15. Separation plate [N] ( $\[ \ \ x \ 2, \ spring \ x \ 2)$ 

16. Remove the pressure roller gear [O] (C x 1), one-way clutch gear [P] (C x 1) and idle gear [Q].

17. Pressure roller [R] (bearing x 2)

18. Fusing belt [S] with rollers (bearing x 4, insulating bushing x 2)

19. Fusing belt [T]

When reassembling the fusing unit

When replacing the fusing roller or pressure roller, you have to apply lubricant to the following places.

### **Fusing Roller**

- Apply "Barrierta S552R" to the notch [A] at the front side of the fusing roller.
- Apply "Barrierta S552R" to the edge [B] of the step at the rear side of the fusing roller.

🔸 Note

Do not apply lubricant to the area [C] as shown.

### **Pressure Roller**

 Apply "Barrierta S552R" to the front edge [A] and rear edge [B] of the pressure roller as shown above.

### Heating, Fusing and Tension Roller

- 1. Fusing belt with rollers ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 2. Fusing roller [A]
- 3. Tension roller [B]
- 4. Heating roller [C]

Lubricant Roller and Cleaning Roller

- 1. Cleaning unit ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 2. Remove the spring [A] and bushing [B] at the front and rear side of the cleaning unit.

- 3. Lubricant roller [C]
- 4. Cleaning roller [D]

## Fusing/Paper Exit Fan

- 1. Open the right door.
- 2. Rear cover
- 3. Right rear cover ( "Right Rear Cover")
- 4. High voltage supply board bracket ( Thigh Voltage Supply Board Bracket")
- 5. Fusing/paper exit fan [A] ( x 1, 💷 x 1, hook x 2)

When Reinstalling the Fan

Make sure that the fusing/paper exit fan is installed with its decal facing to the right side.

### Heating Roller Thermostats

- 1. Fusing upper cover ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 2. Heating roller thermostats [A] ( x 2 each)

Heating Roller Thermistor

F

- 1. Fusing upper cover ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 2. Top frame (IF "Fusing Belt, Pressure Roller, Fusing Lamps")
- 3. Release the connector [A].

4. Heating roller thermistor [B] ( x 1)

### Pressure Roller Thermistor and Thermostat

- 1. Fusing upper cover ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 2. Front and rear side stay ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 3. Pressure roller fusing lamp rear stay [A]

- 4. Pressure roller fusing lamp front stay [B] ( x 1) and screw [C] for the pressure roller lamp terminal
- 5. Pressure roller ( "Fusing Belt, Pressure Roller, Fusing Lamps")

- 6. Pressure roller thermostat [D] ( x 2)
- 7. Pressure roller thermistor [E] ( $\mathscr{F} \times 1$ )

## Thermopile

- 1. Open the right door.
- 2. Front right cover ( "Operation Panel")
- 3. Fusing unit ( "Fusing Unit")
- 4. Remove the inverter tray [A].
- 5. Release the hook [D] of the inner cover at the inside frame, and then remove the inner cover [B].
- 6. Disconnect the connector [C].

7. Paper exit unit [E] (🖗 x 2, 📫 x 1)

8. Thermopile [F] ( 🖗 x 2, 📫 x 1)

Fusing Gear and One-way Clutch

- 1. Fusing unit ( "Fusing Unit")
- 2. Fusing upper cover ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 3. Release the pressure roller lamp cord [A] ( $\Re x$  1).
- 4. Rear side stay [B] ( X 2)

- 5. Release the idle gear [C]
- 6. Release the One-way clutch gear [D] (C-ring x 1)

Heating Roller Bearing and Insulating Bushing

- 1. Fusing unit ( "Fusing Unit")
- 2. Fusing upper cover ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 3. Release the pressure roller lamp cord [A] ( $\Re x$  1).
- 4. Rear side stay [B] ( x 2)

5. Front side stay [C] ( x 2)

- 6. Release the heating roller lamp cord [D] ( $\mathscr{F} \times 4$ )
- 7. Remove the rear and front heating lamp brackets [E] ( $\mathscr{F} \times 1$  each)

8. Remove the heating roller lamp [F].

9. Remove the rear and front heating roller bearings [G] and insulating bushings [H].

## Pressure Roller Bearing

- 1. Fusing upper cover ( "Fusing Belt, Pressure Roller, Fusing Lamps")
- 2. Front and rear side stay ( "Heating Roller Bearing and Insulating Bushing")
- 3. Pressure roller fusing lamp rear stay [A]

4. Pressure roller fusing lamp front stay [B] ( X 1) and screw [C] for the pressure roller lamp terminal

5. Pressure roller bearing [D]

# Paper Feed

## Paper Feed Unit

- 1. Rear cover ( Rear Cover ")
- 2. Right rear cover ( Tright Rear Cover ")
- 3. Duplex unit ( "Duplex Unit")
- 4. Pull out tray 1 and tray 2.
- 5. Paper guide plate [A] (hook x 2)
- 6. Paper feed unit [B] ( x 2, 💷 x 1)

# Pick-Up, Feed and Separation Rollers

## Tray 1 and Tray 2

- 1. Paper feed unit ( Paper Feed Unit")
- 2. Roller holder [A] ( x 1)
- 3. Pick-up roller [B]
- 4. Feed roller [C]
- 5. Separation roller [D] and torque limiter [E] ( $\bigcirc x$  1)

# Tray Lift Motor

- 1. Rear cover ( Rear Cover'')
- 2. PSU bracket (IF "PSU")
- 3. Open the controller box ( "Controller Box")
- 4. IOB bracket (IF "IOB")
- 5. Tray lift motor 1 [A] ( x 2, 💷 x 3)
- 6. Tray lift motor 2 [B] ( x 2, 💷 x 3)

Vertical Transport Sensor, Paper Overflow Sensor and Paper End Sensor

- 1. Rear cover ( Rear Cover ")
- 2. Right rear cover (IF "Right Rear Cover")
- 3. Paper feed unit (IF "Paper Feed Unit")
- 4. Paper overflow sensor [A] and paper end sensor [B] (hook, 📫 x 1 each)
- 5. Paper end feeler [C]
- 6. Vertical transport sensor bracket [D] ( x 1, 🛱 x 1)
- 7. Vertical transport sensor [E] (🗊 x 1, hook)

# **Registration Sensor**

- 1. Rear cover ( Rear Cover'')
- 2. Right rear cover (IFT "Right Rear Cover")
- 3. Paper feed unit ( "Paper Feed Unit")
- 4. Paper guide plate 1 [A] and 2 [B] ( x 2 each)
- 5. Registration sensor [C] (💷 x 1, hook)

# By-pass Paper Size Detection Switch

- 1. Open the by-pass tray [A].
- 2. By-pass tray cover [B] (4 hooks)

- 3. Close the by-pass tray.
- 4. By-pass paper size detection switch [C] (💷 x 1)

### When reinstalling this switch

- 1. Adjust the projection [B] of the left side fence bar (it must be centered).
- 2. Install the by-pass paper size detection switch so that the hole [A] in this switch faces the projection [B] of the left side fence bar.
- 3. Reassemble the copier.
- 4. Plug in and turn on the main power switch.

5. Check this switch operation with SP5803-071 (By-pass paper size < Input Check).</li>
- Display on the LCD -

Paper Size	Display	Paper Size	Display
A3 SEF	10010000	B5 SEF	11100000
B4 SEF	11010000	B6 SEF	00110000
A4 SEF	11000000	A6 SEF	10110000

## By-pass Paper Feed Unit

- 1. Open the right door.
- 2. Remove the by-pass tray unit gear [A] ( X 1) and bushing [B], at the rear of the tray.
- 3. Close the right door.

- 4. Open the by-pass tray unit.
- 5. By-pass tray cover [C] (4 hooks)

6. By-pass paper feed unit [D] ( x 1, x 2)

# **Duplex Unit**

**Duplex Unit** 

- 1. Rear cover ( Rear Cover'')
- 2. Right rear cover ( Tright Rear Cover ")
- 3. Open the right door.
- 4. Duplex unit [A] ( 🖉 x 2, 💷 x 1, 🕅 x 1)

Vote Note

• When removing the duplex unit, pull it to the rear side.

**Duplex Transport Motor** 

- 1. Rear cover ( Rear Cover ")
- 2. Right rear cover ( "Right Rear Cover")
- 3. High voltage supply board bracket ( Ither " High Voltage Supply Board Bracket ")
- 4. Duplex transport motor bracket [A] ( x 3, 💷 x 1)

5. Duplex transport motor [B] ( $\mathscr{F} \ge 4$ , timing belt  $\ge 1$ )

# **Electrical Components**

## Controller Unit

1. Controller unit [A] ( x 5)

### Controller Box Cover

- 1. Rear cover ( Rear Cover ")
- 2. Loosen the eight screws.
- 3. Slide up the controller box cover [A], and then remove it.

### **Controller Box**

- 1. Rear cover ( Rear Cover ")
- 2. Controller box cover ( Controller Box Cover")
- 3. Disconnect all the connectors on the BICU and release the clamps. ( x 5, x 3)
- 4. Remove the ground cable ( $\mathscr{F} \times 1$ ) and one flat cable.

🔸 Note

• Make sure that the flat cable is removed. If not, the flat cable can be damaged.

Release all the clamps on the top and bottom of the controller box (top: A 3, bottom: A 5).

7. Hinge bracket [B] ( X 1)

8. Controller box [C]

### BICU

- 1. Rear cover (IFT "Rear Cover")
- 2. Controller box cover (IF "Controller Box Cover")
- 3. Mother board bracket [A] ( x 4)
- 4. BICU [B] ( *k* x 5, IIII x 10, one flat cable )

When installing the new BICU

Remove the NVRAM from the old BICU. Then install it on the new BICU after you replace the BICU. Replace the NVRAM (\*\*\* "NVRAM Replacement Procedure") if the NVRAM on the old BICU is defective.

Vote Note

 Make sure you print out the SMC reports ("SP Mode Data" and "Logging Data") before you replace the NVRAM.

# ACAUTION

- Keep NVRAMs away from any objects that can cause static electricity. Static electricity can damage NVRAM data.
- Make sure the NVRAM is correctly installed on the BICU. Insert the NVRAM in the NVRAM slot with the "half-moon" [C] pointing to the left.
- Make sure that the DIP-switch settings on the old BICU are the same for the new BICU when. Do not change the DIP switches on the BICU in the field.

## IOB

- 1. Rear cover ( Rear Cover ")
- 2. PSU bracket (IF "RPSU")
- 3. IOB [A] (🖉 x 7, ALL 🗐 s)
- 4. Open the controller box ( Tontroller Box Cover")
- 5. IOB bracket [B] ( x 5, 🛱 x 2)

# PSU

- 1. Rear cover ( Rear Cover'')
- 2. Loosen the seven screws.
- 3. Slide the PSU box cover [A] to the left side and then remove it.

21-Apr-2006

## Replacement and Adjustment

4. PSU [B] (🖉 x 7, All 🕬 s, 🛱 x 3)

5. PSU bracket [C] ( x 4, 🛱 x 10)

SIO (Scanner In/Out) Board

1. Rear cover ( Rear Cover'')

2. Remove the screw of the SBU harness [A] ( $\stackrel{\frown}{\boxminus}$  x 2).

3. SIO board with bracket [B] ( x 4, All Iss)

High Voltage Supply Board

- 1. Rear cover ( Rear Cover'')
- 2. High voltage supply board [A] ( 🕅 x 6, All 🕬 s, 🛱 x 1)

## High Voltage Supply Board Bracket

- 1. Rear cover ( Rear Cover'')
- 2. Remove all the connectors and release the clamp [A].

- 3. Release all the clamps [B].
- 4. Open out the high voltage supply board bracket [C] ( $\mathscr{F} \times 3$ ) and then remove it.

### **Controller Board**

- 1. Controller unit ( Controller Box")
- 2. Fan bracket [A] and grip [B] ( x 1, 💷 x 1)
- 3. Controller board [C] ( x 7, 📫 x 2)

4. Interface rails [D], NV-RAM [E] and RAM-DIMM(s) [F]

When installing the new BICU

Remove the NVRAM from the old controller board. Then install it on the new controller board after you replace the controller board. Replace the NVRAM (IF "NVRAM Replacement Procedure") if the NVRAM on the old controller board is defective.

Vote Note

 Make sure you print out the SMC reports ("SP Mode Data" and "Logging Data") before you replace the NVRAM.

# ACAUTION

- Keep NVRAMs away from any objects that can cause static electricity. Static electricity can damage NVRAM data.
- Make sure the NVRAM is correctly installed on the controller board.
- Make sure that the DIP-switch settings on the old controller board are the same for the new controller board. Do not change the DIP switches on the controller board in the field.

HDD

- 1. Controller unit ( Controller Box")
- 2. HDD unit [A] ( 🕅 x 4, 💷 x 2)

- 3. HDD unit upper cover [B] and lower cover [C] ( x 5)
- 4. HDD [D]

- 5. Turn the main switch on. The disk is automatically formatted.
- 6. Install the stamp data using "SP5853".
- 7. Switch the machine off and on to enable the fixed stamps for use.

#### Disposal of HDD Units

- Never remove an HDD unit from the work site without the consent of the client.
- If the customer has any concerns about the security of any information on the HDD, the HDD must remain with the customer for disposal or safe keeping.
- The HDD may contain proprietary or classified (Confidential, Secret) information. Specifically, the HDD contains document server documents and data stored in temporary files created automatically during copy job sorting and jam recovery. Such data is stored on the HDD in a special format so it cannot normally be read but can be recovered with illegal methods.

#### Reinstallation

Explain to the customer that the following information stored on the HDD is lost when the HDD is replaced:

- Document server documents
- Custom-made stamps
- Document server address book

The address book and document server documents (if needed) must be input again.

If the customer is using the Data Overwrite Security feature, the DOS function must be set up again. For more, see Section 1 (Installation).

If the customer is using the optional Browser Unit, this unit must be installed again. For more, see Section 1 (Installation).

#### NVRAM Replacement Procedure

#### NVRAM on the BICU

- 1. Make sure that you have the SMC report (factory settings). This report comes with the machine.
- 2. Output the SMC data ( SP5-990-001) if possible.
- 3. Turn the main switch off.
- 4. Install an SD card into SD card slot 3. Then turn the main power on.
- 5. Copy the NVRAM data to an SD card ( SP5-824-001) if possible.
- 6. Turn off the main switch. Then unplug the power cord.

- 7. Replace the NVRAM on the BICU and reassemble the machine.
- 8. Plug in the power cord. Then turn the main switch on.
- 9. Select a paper-size type ( SP5-131-001).
- 10. Specify the device number and destination code of the machine.

Vote Note

- Contact your supervisor for details on how to enter the device number and destination code.
- SC 999 or "Fusing Unit Setting Error" can be shown until the device number and destination code are correctly programmed.
- 11. Turn the main switch off and on.
- 12. Copy the data from the SD card to the NVRAM ( SP5-825-001) if you have successfully copied them to the SD card.
- 13. Turn the main switch off. Then remove the SD card from SD card slot 3.
- 14. Turn the main switch on.
- 15. Specify the SP and UP mode settings.
- 16. Do the process control self-check.
- 17. Do ACC for the copier application program.
- 18. Do ACC for the printer application program.

NVRAM on the Controller

# ACAUTION

- If you change the NVRAM in the controller, and the Data Overwrite Security unit is installed, this Data Overwrite Security unit must be replaced with a new one.
- 1. Make sure that you have the SMC report (factory settings). This report comes with the machine.
- 2. Output the SMC data ( SP5-990-001) if possible.
- 3. Turn the main switch off. Then put a blank formatted SD card into SD card slot 3.
- 4. Turn the main switch on.
- Copy the NVRAM data ( SP5-824-001) and the address book data in the HDD ( SP5846-051) to an SD card if possible.

Vote Note

- An error message shows if local user information cannot be stored in an SD card because the capacity is not enough.
- You cannot do this procedure if the SD card is write-protected.
- 6. Enter SP mode. Then print out the SMC reports ( SP5-990-001) if possible.
- 7. Turn off the main switch. Then unplug the power cord.

- 8. Replace the NVRAM on the controller. Then reassemble the machine.
- 9. Check if the serial number shows on the operation panel. (SP5-811-002). Input the serial number if it does not show. (Contact your supervisor about this setting.)
- 10. Plug in the power cord. Then turn the main switch on.
- 11. Copy the data from the SD card to the NVRAM ( SP5-825-001) and HDD (SP5-846-52) if you have successfully copied them to the SD card.

🔸 Note

- The counter data in the user code information clears even if step 11 is done correctly.
- An error message shows if the download is incomplete. However, you can still use the part of the address book data that has already been downloaded in step 11.
- An error message shows when the download data does not exist in the SD card, or, if it is already deleted.
- You cannot do this procedure if the SD card is write-protected.
- 12. Go out of SP mode. Then turn the main switch off. Then remove the SD card from SD card slot 3.
- 13. Turn the main switch on.
- 14. Specify the SP and UP mode settings.
- 15. Do ACC for the copier application program.
- 16. Do ACC for the printer application program.

# Process Control Error Conditions

#### **Developer Initialization Result**

# SP-3-014-001 (Developer Initialization Result)

No.	Result	Description	Possible Causes	Action
1	Successfully completed	Developer initialization is successfully completed.	-	
2	Forced termination	Developer initialization was forcibly terminated.	A cover was opened or the main switch was turned off during the initialization.	When done in SP mode, do the developer initialization again. Reinstall the engine main firmware if the result is the same. Turn the main switch off and on when done at unit replacement.
6	Vt error	Vt is more than 0.7V when Vcnt is 4.3V.	<ol> <li>Make sure that the development unit</li> <li>Defective TD sens</li> </ol>	is not removed.
7	Vcnt error 1	Vcnt is less than 4.7V when Vcnt is Vt target ± 0.2V.	<ol> <li>Defective TD sens</li> <li>Vt target settings a</li> <li>Toner density erro</li> </ol>	are not correct.
8	Vcnt error 2	Vt is more than 0.7V when Vcnt is 4.3V and	<ol> <li>Make sure that the development unit</li> <li>Defective TD sense</li> </ol>	is not removed.

Troubleshooting

No.	Result	Description	Possible Causes	Action
		Vcnt is less than 4.7V when Vcnt is Vt target ± 0.2V.		
9	Vcnt error 3	Vcnt is less than 4.7V.	<ol> <li>Make sure that the development unit</li> <li>Defective TD senses</li> <li>Vt target settings at</li> <li>Toner density error</li> </ol>	is not removed sor are not correct.

Vote

 The machine starts developer initialization after you set "Enable" in SP3-902-005, 006, 007, or 008. Developer initialization automatically resumes when you open and close the front door or turn the main switch off and on if an error other than Error 8 occurs.

#### Process Control Self-Check Result

#### SP3-012-001 to -010 (Process Control Self-check Result)

No.	Result	Description	Possible Causes	Action
11	Successfully completed	Process control self-check successfully completed.	-	Check the Vsg adjustment. See the " Vsg Adjustment Result" following this table.
41	Vt error	Vt maximum or minimum error is detected.	<ol> <li>Defective development unit</li> </ol>	<ul> <li>Vt maximum error and an image is faint:</li> <li>Replace the toner supply pump unit.</li> <li>Vt maximum error and an image is O.K:</li> <li>Replace the development unit.</li> </ul>

No.	Result	Description	Possible Causes	Action
				<ul> <li>Replace the IOB board.</li> <li>Vt minimum error:</li> <li>Replace the development unit.</li> <li>Replace the IOB board.</li> </ul>
53	ID sensor coefficient (K5) detection error	Not enough data can be sampled.	-	<ul> <li>Solid image is not sufficient density:</li> <li>Retry the process control.</li> <li>Replace the ID sensors.</li> <li>Replace the IOB board.</li> <li>Solid image is O.K.</li> <li>Replace the ID sensors.</li> <li>Replace the ID board.</li> <li>ID sensor is dirty:</li> <li>Clean the ID sensors.</li> <li>Retry the process control.</li> </ul>
54	ID sensor coefficient (K5) maximum/ minimum error	When the K5 is more than the value of SP3-362-003 or less than the value of SP3-362-004, the error 54 is displayed.	<ol> <li>ID sensor pattern density is too high or low.</li> <li>ID sensor or shutter is defective.</li> </ol>	Same as 53

21-Apr-2006

No.	Result	Description	Possible Causes	Action
55	Gamma error: Maximum	Gamma is out of range. 5.0 < Gamma	<ol> <li>ID sensor pattern density is too high.</li> <li>Hardware defective.</li> </ol>	Same as 53
56	Gamma error: Minimum	Gamma is out of range. Gamma < 0.15	<ol> <li>ID sensor pattern density is too low.</li> <li>Hardware defective.</li> </ol>	Same as 53 <ul> <li>Replace the toner supply pump unit.</li> </ul>
57	Vk error: Maximum	Vk is out of range. 150 < Vk	<ol> <li>ID sensor pattern density is too low.</li> <li>Hardware defective.</li> </ol>	Same as 53
58	Vk error: Minimum	Vk is out of range. Vk < -150	<ol> <li>ID sensor pattern density is too high.</li> <li>Background dirty</li> <li>Hardware defective</li> </ol>	Same as 53
59	Sampling data error during gamma correction	Not enough data can be sampled during the gamma correction.	<ol> <li>ID sensor pattern density is too high or low.</li> <li>Hardware defective</li> </ol>	Same as 53

Vsg Adjustment Result

# SP3-325-001 to -010 (Vsg Adjustment Result)

N	۱o.	Result	Description	Possible Causes	Action
	1	О.К	Vsg adjustment	-	-

Troubleshooting

No.	Result	Description	Possible Causes	Action
		is correctly done.		
2	ID sensor adjustment error	Vsg cannot be adjusted within 4.0 ± 0.5V.	<ol> <li>Dirty ID sensor (toner, dust, or foreign material)</li> <li>Dirty transfer belt</li> <li>Scratched image transfer belt</li> <li>Defective ID sensor</li> <li>Poor connection</li> <li>Defective IOB</li> </ol>	<ul> <li>Clean the ID sensor.</li> <li>Check the belt cleaning. Clean or replace the transfer belt.</li> <li>Replace the image transfer belt.</li> <li>Replace the ID sensor.</li> <li>Check the connection.</li> <li>Replace the IOB board.</li> </ul>
3	ID sensor output error	ID sensor output is more than "Voffset Threshold" (SP3-324-004)	<ol> <li>Defective ID sensor</li> <li>Poor connection</li> <li>Defective IOB</li> </ol>	<ul> <li>Replace the ID sensor.</li> <li>Check the connection.</li> <li>Replace the IOB board.</li> </ul>
9	Vsg Adjustment error	Vsg adjustment has not been completed.	Other cases	<ul> <li>Retry the SP3-321-010.</li> </ul>

Line Position Adjustment Result

SP2-194-010 to -012 (Line Position Adjustment Result: M, C, Y)

This SP shows the number as a line position adjustment result on the LCD. It shows which color has an error (M, Y or C).

No.	Result	Description	Note
0	Not done	Line position adjustment has not been done.	-
1	Completed successfully	Line position adjustment has correctly been done,	-
2	Cannot detect patterns	ID sensors have not detected the patterns for line position adjustment.	See Note
3	Fewer lines on the pattern than the target	The patterns, which ID sensors has detected, are not enough for line position adjustment.	See Note
4	More lines on the pattern than the target	Not used in this machine.	-
5	Out of the adjustment range	ID sensors has correctly detected the patterns for line position adjustment, but a shift of patterns is out of adjustable range.	See Note
6-9	Not used	-	-

🔸 Note

• For details, see the "Troubleshooting Guide - Line Position Adjustment" section.

# Scanner Test Mode

#### VPU Test Mode

Output the VPU test pattern with SP4-907-001 to make sure the scanner VPU control operates correctly. The VPU test pattern prints out after you have set the SP mode settings and pressed the start key.

- The CCD on the SBU board may be defective if the copy is abnormal and the VPU test pattern is normal.
- The following can be the cause if the copy is normal and the VPU test pattern is abnormal:
  - The harness may not be correctly connected between the SBU and the BICU
  - The BICU (IPU) or SBU board may be defective.

#### BICU (IPU) Test Mode

You can check the BICU (IPU) board with the SP mode menu, SP4-904-1 or -2.

If no error is detected, the test ends. Then the completion code shows in the operation panel display. If an error is detected, the test is interrupted. Then an error code shows. The table below lists the completion and error codes.

#### SP4-904-1 Register Access

There are 16 bits switches in this SP. Each bit indicates each CPU as followings. The error result is displayed on the operation panel in decimal number.

0: Normal, 1: Error

Bit 0: TAURUS register	Bit 3 to 11: Not used
Bit 1: ORION register	Bit 12: Ri20 register
Bit 2: LUPUS register	Bit 13 to 15: Not used

SP4-904-2 Image Path

There are 16 bits switches in this SP. Each bit indicates each CPU path as followings. The error result is displayed on the operation panel in decimal number.

0: Normal, 1: Error

Bit 0: Image path from SBU to TAURUS	Bit 4 to 11: Not used
Bit 1: Image path from TAURUS to ORION	Bit 12: Image path from LUPUS to Ri20
Bit 2: Image path from ORION to TAURUS	Bit 13: Image path from Ri20 to GAVD
Bit 3: Image path from TAURUS to LUPUS	Bit 14 and 15: Not used

Errors may be caused by the following problems:

- 1. Short circuit on the signal lines
  - When the BICU board is installed, a pin or two on the ASIC is damaged.
  - Some conductive matter or object is trapped among the pins.
  - Condensation
- 2. Destruction of circuit elements
  - Over current or a defective element breaks the circuit.
- 3. Abnormal power supply

•The required voltage is not supplied to the devices.

- 4. Overheat/overcooling
  - The environment is inappropriate for the board (the scanner unit).
- 5. Static electricity
  - Static electricity of a high voltage occurs during the test.
- 6. Others
  - The scanner and BICU are incorrectly connected.

When you have completed a check, turn the main switch off and on before you do another check. When you have completed all necessary checks, turn the main switch off and on.

# Service Call Conditions

#### Summary

The 'SC Table' section shows the SC codes for controller errors and other errors. The latter (not controller errors) are put into four types. The type is determined by their reset procedures. The table shows the classification of the SC codes.

	Key	Definition	Reset Procedure
Controller errors	CTL	The error has occurred in the controller.	See "Troubleshooting Procedure" in the table.
	A	The error involves the fusing unit. The machine operation is disabled. The user cannot reset the error.	Turn the main switch off and on. Reset the SC (set SP5-810-1). Turn the main switch off and on.
	В	The error involves one or some specific units. The machine operates as usual, excluding the related units.	Turn the operation switch off and on.
Other errors	С	The error is logged. The SC-code history is updated. The machine operates as usual.	The SC will not show. Only the SC history is updated.
	D	The machine operation is disabled. You can reset the machine by turning the operation switch or main switch off and on. If the error occurs again, the same SC code is displayed.	Turn the operation switch or main power switch off and on.

After you turn the main power switch off, wait for one second or more before you turn the main power switch on ( SC 672). All SCs are logged. The print log data (SP5-990-004) in SP mode can check the latest 10 SC codes detected and total counters when the SC code is detected.

🕹 Note

- If the problem concerns electrical circuit boards, first disconnect then reconnect the connectors before you replace the PCBs.
- If the problem concerns a motor lock, first check the mechanical load before you replace motors or sensors.

#### SC Code Classification

#### The table shows the classification of the SC codes:

Class 1	Section	SC Code	Detailed section
1XX	Scanning	100 -	Scanner
1700	Coarming	190 -	Unique for a specific model
		200 -	Polygon motor
		220 -	Synchronization control
2XX	Laser exposure	230 -	FGATE signal related
2,00		240 -	LD control
		260 -	Magnification
		280 -	Unique for a specific model
		300 -	Charge
зхх	Image development 1	330 -	Drum potential
0,01		350 -	Development
		380 -	Unique for a specific model
4XX	Image development 2	400 -	Image transfer
		420 -	Paper separation
		430 -	Cleaning
		440 -	Around drum
		460 -	Unit

Class 1	Section	SC Code	Detailed section
		480 -	Others
		500 -	Paper feed
5XX	Paper feed / Fusing	515 -	Duplex
		520 -	Paper transport
		530 -	Fan motor
5XX	Paper feed / Fusing	540 -	Fusing
5700		560 -	Others
		570 -	Unique for a specific model
		600 -	Electrical counters
	Communication	620 -	Mechanical counters
		630 -	Account control
6XX		640 -	CSS
		650 -	Network
		670 -	Internal data processing
		680 -	Unique for a specific model
		700 -	Original handling
7XX	Peripherals	720 -	Two-tray finisher
		740 -	Booklet finisher
		800 -	Error after ready condition
8XX	Controller	820 -	Diagnostics error
		860 -	Hard disk
		880 -	Unique for a specific model

Class 1	Section	SC Code	Detailed section
9XX	Others	900 -	Counter
		920 -	Memory
		990 -	Others

# SC Table

No.	Туре	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		Exposure lamp error -001: Shading at AGC -002: Shading at scanning The peak white level is less than 64/255 digits (8 bits) when scanning the shading plate. (The shading data peak does not reach the specified threshold)
101	D	<ul> <li>Exposure lamp defective</li> <li>Lamp stabilizer defective</li> <li>Exposure lamp connector defective</li> <li>Standard white plate dirty</li> <li>Scanner mirror or scanner lens out of position or dirty</li> <li>SBU defective</li> </ul>
		<ol> <li>Check and clean the scanner mirror(s) and scanner lens.</li> <li>Check and clean the shading plate.</li> <li>Replace the exposure lamp.</li> <li>Replace the lamp stabilizer.</li> <li>Replace the scanner mirror(s) or scanner lens.</li> <li>Replace the SBU.</li> </ol>

No.	Туре	Details (Symptom, Possible Cause, Troubleshooting Procedures)	
120	D	Scanner home position error 1	
		The scanner home position sensor does not detect the "OFF" condition during operation.	
		<ul> <li>Scanner motor driver defective</li> <li>Scanner motor defective</li> <li>Harness between SIO board and scanner motor disconnected</li> <li>Scanner HP sensor defective</li> <li>Harness between SBU and HP sensor disconnected</li> </ul>	

No.	Туре	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		<ol> <li>Check the cable connection between the SIO board and scanner motor.</li> </ol>
		2. Check the cable connection between the SBU and HP sensor.
		<ol> <li>Replace the scanner motor.</li> <li>Replace the HP sensor.</li> </ol>

No.	Туре	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		Scanner home position error 2
		The scanner home position sensor does not detect the "ON" condition during operation.
121	D	<ul> <li>Scanner motor driver defective</li> <li>Scanner motor defective</li> <li>Harness between SIO board and scanner motor disconnected</li> <li>Scanner HP sensor defective</li> <li>Harness between SBU and HP sensor disconnected</li> <li>Check the cable connection between the SIO board and scanner motor.</li> <li>Check the cable connection between the SBU and HP sensor.</li> <li>Replace the scanner motor.</li> <li>Replace the HP sensor.</li> </ul>

No.	Туре	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		Black level detection error -001: After the home position detection -002: After the AGC
141	D	The black level cannot be adjusted within the target value during the zero clamp.
		Defective SBU
		1. Replace the SBU.

No.	Туре	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		White level detection error
		The white level cannot be adjusted within the target during auto gain control.
142	D	<ul> <li>Dirty exposure glass or optics section</li> <li>SBU board defective</li> <li>Exposure lamp defective</li> <li>Lamp stabilizer defective</li> </ul>
		<ol> <li>Clean the exposure glass, white plate, mirrors, and lens.</li> <li>Check if the exposure lamp is lit during initialization.</li> <li>Check the harness connection between SBU and BICU.</li> <li>Replace the exposure lamp.</li> <li>Replace the SBU board.</li> </ol>

\_\_\_\_\_

No.	Туре	Details (Symptom, Possible Cause, Troubleshooting Procedures)	
144		SBU communication error	
		SBU connection error	
		The SBU connection cannot be detected at power on or recovery from the energy save mode.

		<ul> <li>Software (including the software configuration) defective</li> <li>An option required by the application (RAM, DIMM, board) is not installed</li> <li>Nesting of the fax group addresses is too complicated</li> </ul>

No.	Туре	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		<ol> <li>Check the devices necessary for the application program. If necessary devices have not been installed, install them.</li> <li>Check that application programs are correctly configured.</li> <li>For a fax operation problem, simplify the nesting of the fax group addresses.</li> <li>Take necessary countermeasures specific to the application program. If the logs can be displayed on the operation panel, see the logs.</li> </ol>

No. Type Details (Symptom, Possible Cause, Troubleshooting Proc	cedures)
998       CTL       Application start error         998       CTL       • Loose connection of RAM-DIMM, ROM-DIMM         • Defective controller       • Software problem         1.       Check the setting of SP5875-001. If the setting is set to change it to "0 (OFF)".         2.       Check if the RAM-DIMM and ROM-DIMM are correctly of 3.         3.       Reinstall the controller system firmware.         4.       Replace the controller.	rned on. "1 (OFF)",

#### Note 1

If a problem always occurs in a specific condition (for example. printer driver setting, image file), the problem may be caused by a software error. In this case, the following data and information needs to be sent back to your product specialist. Please understand that it may take some time to get a reply on how to solve the problem, because in some cases the design staff in Japan must analyze the data.

- Symptom / Possible Causes / Action taken
- Summary sheet (SP mode "Printer SP", SP1-004 [Print Summary])
- SMC All (SP5-990-001)
- SMC Logging (SP5-990-004)
- Printer driver settings used when the problem occurs

- All data displayed on the screen (SC code, error code, and program address where the problem is logged.)
- Image file which causes the problem, if possible

# **Troubleshooting Guide**

#### Image Quality

The following work-flow shows the basic troubleshooting steps for the image quality problems on this product.

When the PCU/development unit is close to its life end, the developer or the cleaning blade of the PCU wears out, causing vertical colour lines, bands, or dirty background. Check the related colour unit and replace it if necessary.

(From the previous diagram)

Line Position Adjustment

When there are color registration errors on the output, do the line position adjustment as follows.

Vote Note

• Use A3/DLT size paper for this adjustment.

#### Test

- 1. Do SP2-111-003 (Mode c: rough adjustment).
- Use SP2-194-007 to check if the result of the line position adjustment is correct (0: Completed successfully, 1: Not completed). If the result is "1", refer to 'Countermeasure list for color registration errors'.
- 3. Do SP2-111-001 (Mode a: fine adjustment twice).
- Use SP2-194-007 to check if the result of the line position adjustment is correct (0: Completed successfully, 1: Not completed). If the result is "1", refer to 'Countermeasure list for color registration errors'.
- 5. Put some A3/DLT paper on the by-pass tray.

🔸 Note

- When you print a test pattern, use the by-pass tray to feed the paper.
- 6. Print out test pattern "7" with SP2-109-003.
- 7. Check the printed output with a loupe.
- 8. If there are no color registration errors on the output, the line position adjustment is correctly done. If not, refer to the countermeasure list for color registration errors.

After Executing SP2-111-003					
Result (SP2-194)			Possible cause/Countermeasure		
-010, -011, -012		Test pattern check

# Jam Detection

Paper Jam Display

SP7-504 shows the paper jam history.

```
CODE :011
SIZE :05h
TOTAL:000034
DATE :Fri Feb 15 11:44:50 2006
```

CODE: indicates the jam code.

SIZE: indicates the paper Size Code.

Total: Indicates the total counter (SP7-502-001).

DATE: indicates the date when the jam occurred.

FU102	15A/125V	6.3A/250V	Fusing heater does not turn on.		
FU103	2A/250V	2A/250V	Tray heater does not turn on.		

# Service Program Mode

# 

Make sure that the data-in LED (Indicates that some data is coming to the machine. When the LED is on, wait for the copier to process the data.

#### Enabling and Disabling Service Program Mode

### 🔸 Note

 The Service Program Mode is for use by service representatives only. If this mode is used by anyone other than service representatives for any reason, data might be deleted or settings might be changed. In such case, product quality cannot be guaranteed any more.

### Entering SP Mode

- 1. Press the "Clear Mode" key (1).
- 3. Hold down "Clear/Stop" (<sup>(C)</sup>) for 3 seconds at least.
- 4. Enter the Service Mode.

#### Exiting SP Mode

1. Press "Exit" on the LCD twice to return to the copy window.

#### Types of SP Modes

- Copy SP: SP modes related to the engine functions
- Printer SP: SP modes related to the controller functions
- Scanner SP: SP modes related to the scanner functions
- Fax SP: SP modes related to the fax functions

Select one of the Service Program modes (Copy, Printer, Scanner, or Fax) from the touch panel as shown in the diagram below after you access the SP mode. This section explains the functions of the Printer/Copy/Scanner SP modes. Refer to the Fax service manual for the Fax SP modes.

#### Service Tables

SP mode	MAIN 1.47.5	Exit
	Copy Sp	
	Fax Sp	
	Printer Sp	
	Scanner Sp	
Please call service.	System Status Job List	7 APR 2006

#### SP Mode Button Summary

Here is a short summary of the touch-panel buttons.

0	Opens all SP groups and sublevels.
0	Closes all open groups and sublevels and restores the initial SP mode display.
0	Opens the copy window (copy mode) so you can make test copies. Press SP Mode (highlighted) in the copy window to return to the SP mode screen,
0	Enter the SP code directly with the number keys if you know the SP number. Then press (*). (The required SP Mode number will be highlighted when pressing (*). If not, just press the required SP Mode number.)

0	Press two times to leave the SP mode and return to the copy window to resume normal operation.
6	Press any Class 1 number to open a list of Class 2 SP modes.
0	Press to scroll the show to the previous or next group.
0	Press to scroll to the previous or next display in segments the size of the screen display (page).
0	Press to scroll the show the previous or next line (line by line).
10	Press to move the highlight on the left to the previous or next selection in the list.

#### Switching Between SP Mode and Copy Mode for Test Printing

- 1. In the SP mode, select the test print. Then press Copy Window.
- 2. Use the copy window (copier mode), to select the appropriate settings (paper size, etc.) for the test print.
- 3. Press Start (2) to start the test print.
- 4. Press SP Mode (highlighted) to return to the SP mode screen and repeat from step 1.

#### Selecting the Program Number

Program numbers have two or three levels.

- 1. Refer to the Service Tables to find the SP that you want to adjust before you begin.
- 2. Press the Group number on the left side SP Mode window that contains the SP that you want to adjust.
- 3. Use the scrolling buttons in the center of the SP mode window to show the SP number that you want to open. Then press that number to expand the list.
- 4. Use the center touch-panel buttons to scroll to the number and title of the item that you want to set and press it. The small entry box on the right activates and shows the below default or the current settings.

#### 🔸 Note

- Refer to the Service Tables for the range of allowed settings.
- 1. Do this procedure to enter a setting:
  - Press <sup>(c)</sup> to toggle between plus and minus and use the keypad to enter the appropriate number. The number you enter writes over the previous setting.

  - Press "Yes" when you are prompted to complete the selection.
- 2. If you need to perform a test print, press Copy Window to open the copy window and select the settings for the test print. Press Start <sup>(\*)</sup> and then press SP Mode (highlighted) in the copy window to return to the SP mode display.
- 3. Press Exit two times to return to the copy window when you are finished.

#### Exiting Service Mode

Press the Exit key on the touch-panel.

#### Service Mode Lock/Unlock

At locations where the machine contains sensitive data, the customer engineer cannot operate the machine until the Administrator turns the service mode lock off. This function makes sure that work on the machine is always done with the permission of the Administrator.

- If you cannot go into the SP mode, ask the Administrator to log in with the User Tool and then set "Service Mode Lock" to OFF after he or she logs in: User Tools > System Settings > Administrator Tools > Service Mode Lock > OFF
  - This unlocks the machine and lets you get access to all the SP codes.
  - The CE can service the machine and turn the machine off and on. It is not necessary

to ask the Administrator to log in again each time the machine is turned on.

- 2. Go into the SP mode and set SP5169 to "1" if you must use the printer bit switches.
- 3. After machine servicing is completed:
  - Change SP5169 from "1" to "0".
  - Turn the machine off and on. Tell the administrator that you have completed servicing the machine.
  - The Administrator will then set the "Service Mode Lock" to ON.

#### Remarks

Display on the Control Panel Screen

The maximum number of characters which can show on the control panel screen is limited to 30 characters. For this reason, some of the SP modes shown on the screen need to be abbreviated. The following are abbreviations used for the SP modes for which the full description is over 20 characters.

<b>Paper Type</b> N: Normal paper MTH: Middle thick paper TH: Thick paper	<b>Paper Feed Station</b> P: Paper tray B: By-pass table
Color Mode [Color] [K]: Black in B&W mode [Y], [M], or [C]: Yellow, Magenta, or Cyan in I [YMC]: Only for Yellow, Magenta, and Cyan [FC]: Full Color mode [FC, K], [FC, Y], [FC, M], or [FC, C]: Black, Y	
<b>Print Mode</b> S: Simplex D: Duplex	Process Speed L: Low speed (77 mm/s) M: Middle speed (Not used in this machine) H: High speed (138 mm/s)

#### Others

The following symbols are used in the SP mode tables.

FA: Factory setting

(Data may be adjusted from the default setting at the factory. Refer to the factory setting

sheets enclosed. You can find it under the jammed paper removal decal.)

DFU: Design/Factory Use only

Do not touch these SP modes in the field.

A sharp (#) to the right hand side of the mode number column means that the main switch must be turned off and on to effect the setting change.

An asterisk (\*) to the right hand side of the mode number column means that this mode is stored in the NVRAM. If you do a RAM clear, this SP mode will be reset to the default value. "ENG" and "CTL" show which NVRAM contains the data.

- ENG: NVRAM on the BICU board
- CTL: NVRAM on the controller board

The settings of each SP mode are explained in the right-hand column of the SP table in the following way.

[Adjustable range / Default setting / Step ] Alphanumeric

Vote Note

 If "Alphanumeric" is written to the right of the bracket as shown above, the setting of the SP mode shows on the screen using alphanumeric characters instead of only numbers. However, the settings in the bracket in the SP mode table are explained by using only the numbers.

**SSP**: This denotes a "Special Service Program" mode setting.

1106	<b>[Fusing Temperature Display]</b> Fusing Temperature Display (Heating or Pressure)			
	Displays the current temperature of the heating and pressure rollers.			
001	Fusing: Center	-	[–20 to 250 / - / 1°C/step]	
002	Fusing: Ends	-	The heating roller has two lamps. One heats the center of the heating roller and the other	
003	Pressure	-	heats both ends of the heating roller.	

1109	[Fusing Nip Band Check]			
001	Execute	-	Executes the nip band measurement between fusing belt and pressure roller. If the nip band width is not 8 mm, and fusing is not good, replace the pressure roller or install a new fusing unit.	
002	Pre-Idling Time	*ENG	[0 to 120 / <b>0</b> / 1 sec/step]	
002	Specifies the fusing rotation time before executing SP1109-001.			
003	Stop Time	* ENG	[5 to 30 / <b>10</b> / 1 sec/step]	
	Specifies the time for measuring the nip.			

1112	[Environmental Correction: Fusing]			
001	Temp.: Threshold: Low	*ENG	[10 to 23 / <b>17</b> / 1°C/step]	
	Specifies the threshold terr	perature	for low temperature condition.	
002	Temp.: Threshold: High	*ENG	[24 to 40 / <b>30</b> / 1°C/step]	
002	Specifies the threshold terr	perature	for high temperature condition.	
	Low Temp. Correction	*ENG	[0 to 15 / <b>5</b> / 1°C/step]	
003	Specifies the temperature correction for the heating roller. When the low temperature condition (specified with SP1112-001) is detected, the value of this SP is added to the heating roller temperature.			
	High Temp. Correction	*ENG	[0 to 15 / <b>5</b> / 1°C/step]	
004	Specifies the temperature correction for the heating roller. When the high temperature condition (specified with SP1112-002) is detected, the value of this SP is subtracted from the heating roller temperature.			

1113	[Stand-by Time]			
	After Ready	*ENG	[0 to 60 / <b>10</b> / 1 sec/step]	
001	If the machine does not do	any print	mode to the stand-by mode. ing job for the time specified with this SP he ready temperature, the machine returns	
002	Recovery Target Temp.	*ENG	[0 to 60 / <b>10</b> / 1 sec/step] Not used	
	After Recovery *ENG [0 to 60 / <b>10</b> / 1 sec/step]			
003	Specifies the interval from the recovery to the stand-by mode. If the machine does not do any printing job for the time specified with this SP after the machine has recovered from the energy save mode, it returns to the stand-by mode.			

1114	[First Print Correction]				
	Correction Temp.	*ENG	[0 to 30 / <b>10</b> / 1°C/step]		
001	Specifies the additional temperature for the first print job. This temperature is added to the heating roller for the time specified with SP1114-002.				
	Operation Time	*ENG	[0 to 60 / <b>2</b> / 1 sec/step]		
002	Specifies the time for adding the first print additional temperature, which is specified with SP1114-001.				
	Shift Time	*ENG	[0 to 5 / <b>0</b> / 0.1 sec/step]		
003	Specifies the start time for adding the first print additional temperature at 138 mm/s line speed. The machine starts to add the first print additional temperature when the time specified with this SP has passed after feeding paper.				
	Shift Time: Half Speed	*ENG	[0 to 5 / <b>0</b> / 0.1 sec/step]		
004	Specifies the start time for adding the first print additional temperature at 77 mm/s line speed. The machine starts to add the first print additional temperature when the time specified with this SP has passed after feeding paper.				

1115	[Stand-by Idling]			
	Interval	*ENG	[1 to 240 / <b>60</b> / 1 min/step]	
001	Specifies the interval between idling during stand-by mode. This idling during the stand-by mode prevents the roller deformation.			
002	Idling Time	*ENG	[1 to 60 / <b>2</b> / 0.1 sec/step]	
002	Specifies the length of each idling operation during stand-by mode.			
003	Idling Speed	*ENG	[0 to 3 / 1 / 1 mm/sec /step] Not used	

1116	[Ends Temp. Correction]				
	Center Temp. 1: 226-	*ENG	[–30 to 0 / <b>0</b> / 1°C/step]		
010	Specifies the temperature correction for the heating roller (center) when the paper width is 226 mm or more. The start time of this SP can be adjusted with SP1116-018.				
	Ends Temp. 1: 226–	*ENG	[–30 to 0 / <b>0</b> / 1°C/step]		
011	Specifies the temperature of paper width is 226 mm or r The start time of this SP ca	nore.	on for the heating roller (ends) when the ljusted with SP1116-018.		
	Center Temp. 2: 226-	*ENG	[–30 to 0 / <b>0</b> / 1°C/step]		
012 Specifies the temperature correction for the heating paper width is 226 mm or more. The start time of this SP can be adjusted with SP111					
	Ends Temp. 2: 226–	*ENG	[–30 to 0 / <b>0</b> / 1°C/step]		
013	Specifies the temperature correction for the heating roller (ends) when the paper width is 226 mm or more. The start time of this SP can be adjusted with SP1116-019.				
	Center Temp. 3: -226	*ENG	[–30 to 0 / <b>–5</b> / 1°C/step]		
014	014 Specifies the temperature correction for the heating roller (center) when th paper width is less than 226 mm. The start time of this SP can be adjusted with SP1116-020.				
	Ends Temp. 3: –226	*ENG	[–30 to 0 / <b>–5</b> / 1°C/step]		
015	Specifies the temperature correction for the heating roller (ends) when the paper width is less than 226 mm. The start time of this SP can be adjusted with SP1116-020.				
	Center Temp. 4: -226	*ENG	[–30 to 0 / <b>–5</b> / 1°C/step]		
016	Specifies the temperature correction for the heating roller (center) when the paper width is less than 226 mm.				

	The start time of this SP can be adjusted with SP1116-021.				
	Ends Temp. 4: –226	*ENG	[–30 to 0 / <b>–10</b> / 1°C/step]		
017	Specifies the temperature correction for the heating roller (ends) when the paper width is less than 226 mm. The start time of this SP can be adjusted with SP1116-021.				
	Control Time 1: 226–	*ENG	[0 to 250 / <b>0</b> / 1 sec/step]		
018	Specifies the start time of the temperature correction that is set with SP1116-010 and -011. The temperature correction is added when the time specified with this SP has passed after feeding the paper.				
	Control Time 2: 226–	*ENG	[0 to 250 / <b>0</b> / 1 sec/step]		
019	Specifies the start time of the temperature correction that is set with SP1116-012 and -013. The temperature correction is added when the time specified with this SP has passed after feeding the paper.				
	Control Time 3: –226	*ENG	[0 to 250 / <b>30</b> / 1 sec/step]		
020	and -015. The temperature correction	pecifies the start time of the temperature correction that is set with SP1116-014 nd -015. he temperature correction is added when the time specified with this SP has assed after feeding the paper.			
	Control Time 4: –226	*ENG	[0 to 250 / <b>60</b> / 1 sec/step]		
021	Specifies the start time of the temperature correction that is set with SP1116-016 and -017. The temperature correction is added when the time specified with this SP has passed after feeding the paper.				
022	Center Temp. 1 Duplex: 226–	*ENG	[–30 to 0 / <b>0</b> / 1°C/step]		
022	Specifies the temperature correction for the heating roller (center) when the paper width is 226 mm or more in duplex mode.				

	The start time of this SP can be adjusted with SP1116-026.					
	Ends Temp. 1 Duplex: 226–	*ENG	[–30 to 0 / <b>0</b> / 1°C/step]			
023	Specifies the temperature correction for the heating roller (ends) when the paper width is 226 mm or more in duplex mode. The start time of this SP can be adjusted with SP1116-026.					
	Center Temp. 2 Duplex: 226–	*ENG	[–30 to 0 / <b>0</b> / 1°C/step]			
024	Specifies the temperature correction for the heating roller (center) when the paper width is 226 mm or more in duplex mode. The start time of this SP can be adjusted with SP1116-027.					
	Ends Temp. 2 Duplex: 226–	*ENG	[–30 to 0 / <b>0</b> / 1°C/step]			
025	Specifies the temperature correction for the heating roller (ends) when the paper width is 226 mm or more in duplex mode. The start time of this SP can be adjusted with SP1116-027.					
	Control Time 1 Duplex: 226–	*ENG	[0 to 250 / <b>0</b> / 1 sec/step]			
026	Specifies the start time of the temperature correction that is set with SP1116-022 and -023. The temperature correction is added when the time specified with this SP has passed after feeding the paper.					
	Control Time 2 Duplex: 226–	*ENG	[0 to 250 / <b>0</b> / 1 sec/step]			
027	Specifies the start time of the temperature correction that is set with SP1116-024 and -025. The temperature correction is added when the time specified with this SP has passed after feeding the paper.					

1117	[Idling Time After Heater OFF]
------	--------------------------------

	After Ready	*ENG	[0 to10 / 4 / 1 sec/step] DFU		
001	Specifies the idling time without the lamp on after reaching the ready temperature.				
	After Job End	*ENG	[0 to10 / <b>4</b> / 1 sec/step]		
002	Specifies the idling time without the lamp on after job end. This idling prevents the heating roller overheating after job end.				

1159	[Fusing Jam Detection]			
	SC Display	*ENG	[0 or 1 / <b>0</b> / 1 /step] 0: Disable, 1: Enable	
001	Enables or disables the fusing consecutive jam detection. If this SP is set to "1" (default: 0), SC559 occurs when the machine detects the paper jam three times consecutively at the fusing unit.

SP2-XXX (Drum)

2005	[Charge DC Voltage] Charge Roller DC Voltage Adjustment (Paper Type, Process Speed, Color) Paper Type -> Plain, Thick 1, Thick 2		
	Adjusts the DC component of the charge roller bias in the various print modes. Charge bias (DC component) is automatically adjusted during process control; therefore, adjusting these settings does not effect while process control mode (SP3-041-1 Default: ON) is activated. When deactivating process control mode with SP3-041-1, the values in these SP modes are used for printing.

	[Color Registration Correction] FA			
2101	These values are the parameters for the automatic line position adjustment and are adjusted at the factory. However, you must input a value for SP2101-001 after replacing the laser optics housing unit. For details, see "Laser Optics Housing Unit" in the "Replacement and Adjustment" section. The value should be provided with the new laser optics housing unit.

2311	[Non Image Area: Bias]	-	
001	Image Transfer	*ENG	Adjusts the bias of the image transfer belt between images. This value is added to the value of the image transfer belt bias. [10 to 250 / <b>100</b> / 5 %/step]
002	Paper Transfer	*ENG	Adjusts the bias of the paper transfer roller between images. [0 to 130 / <b>5</b> / 1 –μA/step]
003	Paper Transfer: Resistance FB	*ENG	Adjusts the bias of the paper transfer roller for measuring the resistance of the paper transfer roller when the image processing starts. [0 to 130 / <b>30</b> / 1 –µA/step]

2314	[P/M Pattern: Bias] Paper type: Plain, Thick, Thick2		
001	Image Transfer: Plain	*ENG	Adjusts the bias of the image transfer belt during the process control and automatic line position control. [0 to 80 / <b>22</b> / 1 μA /step]
002	Image Transfer: Thick 1	*ENG	Not used

003	Image Transfer: Thick 2 & FINE	*ENG	Not used
-----	--------------------------------	------	----------

2316	[Power ON: Bias]		
001	Image Transfer	*ENG	Adjusts the bias of the image transfer belt at warming up mode after a machine has been turned on or any door has been closed. [0 to 80 / <b>5</b> / 1 μA /step]

2326	[Transfer Roller CL: Bias] Transfer Roller Cleaning: Bias Adjustment				
	Positive	*ENG	[0 to 5000 / <b>2000</b> / 1 V /step]		
001	Adjusts the positive voltage of the paper transfer roller for cleaning the paper transfer roller.				
	Negative	*ENG	[0 to 200 / <b>50</b> / 1 –µA /step]		
002	Adjusts the negative current of the paper transfer roller for cleaning the paper transfer roller.				
	Negative: Limit Voltage	*ENG	[0 to 5000 / <b>2000</b> / 1 –V /step]		
003	Adjusts the negative current limit of the paper transfer roller for cleaning the paper transfer roller.				

2351	[Common: BW: Bias] Image Transfer Belt: B/W: Bias Adjustment				
001	Image Transfer: Plain	*ENG	[0 to 80 / <b>24</b> / 1 μA]		
001	Adjusts the current for the image transfer belt in B/W mode for plain paper.				
002	Image Transfer: Thick 1	*ENG	[0 to 80 / <b>14</b> / 1 μA]		
	Adjusts the current for the image transfer belt in B/W mode for thick 1 paper.				
003	Image Transfer: Thick 2 & FINE	*ENG	[0 to 80 / <b>12</b> / 1 μA]		

Adjusts the current for the image transfer belt in B/W mode for thick 2 paper or FINE mode.

2357	[Common: FC: Bias] Image Transfer Belt: Full Color: Bias Adjustment				
	Image Transfer: Plain: Bk	*ENG	[0 to 80 / <b>20</b> / 1 μA]		
001	Adjusts the current for the ir plain paper.	nage tr	ransfer belt for Black in full color mode for		
	Image Transfer: Plain: M	*ENG	[0 to 80 / <b>20</b> / 1 μA]		
002	Adjusts the current for the ir plain paper.	nage tr	ansfer belt for Magenta in full color mode for		
	Image Transfer: Plain: C	*ENG	[0 to 80 / <b>22</b> / 1 μA]		
003	Adjusts the current for the image transfer belt for Cyan in full color mode for plain paper.				
	Image Transfer: Plain: Y	*ENG	[0 to 80 / <b>30</b> / 1 μA]		
004	Adjusts the current for the image transfer belt for Yellow in full color mode for plain paper.				
005	Image Transfer: Thick 1: Bk	*ENG	[0 to 80 / <b>11</b> / 1 μA]		
000	Adjusts the current for the image transfer belt for Black in full color mode for thick 1 paper.				
006	Image Transfer: Thick 1: M	*ENG	[0 to 80 / <b>11</b> / 1 μA]		
000	Adjusts the current for the image transfer belt for Magenta in full color mode for thick 1 paper.				
007	Image Transfer: Thick 1: C	*ENG	[0 to 80 / <b>12</b> / 1 μA]		
	Adjusts the current for the image transfer belt for Cyan in full color mode for thick				

Service Tables

	1 paper.					
008	Image Transfer: Thick 1: Y	*ENG	[0 to 80 / <b>17</b> / 1 μA]			
	Adjusts the current for the thick 1 paper.	image ti	ransfer belt for Yellow in full color mode for			
009	Image Transfer: Thick 2 & FINE: Bk	*ENG	[0 to 80 / <b>12</b> / 1 μA]			
	Adjusts the current for the Thick 2 and fine.	Adjusts the current for the image transfer belt for Black in full color mode for Thick 2 and fine.				
010	Image Transfer: Thick 2 & FINE: M	*ENG	[0 to 80 / <b>12</b> / 1 μA]			
	Adjusts the current for the image transfer belt for Magenta in full color mode for Thick 2 and fine.					
011	Image Transfer: Thick 2 & FINE: C	*ENG	[0 to 80 / <b>12</b> / 1 μA]			
	Adjusts the current for the image transfer belt for Cyan in full color mode for Thick 2 and fine.					
012	Image Transfer: Thick 2 & FINE: Y	*ENG	[0 to 80 / <b>12</b> / 1 μA]			
012	Adjusts the current for the image transfer belt for Yellow in full color mode for Thick 2 and fine.					

	[Common: LL]			
2381	Adjusts the environment coefficient for each mode. When the environment is detected as LL, SP2351 and SP2357 are multiplied by these SP values.			
001	Image Transfer: Plain	*ENG	[10 to 250 / <b>70</b> / 5%/step]	
002	Image Transfer: Thick 1	*ENG	[10 to 250 / <b>80</b> / 5%/step]	

00	Image Transfer: Thick 2 & FINE	*ENG	Not used
00	Image Transfer: P/M Pattern	*ENG	[10 to 250 / <b>100</b> / 5%/step] P/M Pattern: When doing process control or automatic line position adjustment.

	[Common: ML]				
2382	Adjusts the environment coefficient for each mode. When the environment detected as ML, SP2351 and SP2357 are multiplied by these SP values.				
001	Image Transfer: Plain	*ENG	[10 to 250 / <b>90</b> / 5%/step]		
002	Image Transfer: Thick 1	*ENG	[10 to 250 / <b>90</b> / 5%/step]		
003	Image Transfer: Thick 2 & FINE	*ENG	Not used		
004	Image Transfer: P/M Pattern	*ENG	[10 to 250 / <b>100</b> / 5%/step] P/M Pattern: When doing the process control or automatic line position adjustment.		

	[Common: MM]				
2383	Adjusts the environment coefficient for each mode. When the environment detected as MM, SP2351 and SP2357 are multiplied by these SP values.				
001	Image Transfer: Plain	*ENG	[10 to 250 / <b>100</b> / 5%/step]		
002	Image Transfer: Thick 1	*ENG	[10 to 250 / <b>100</b> / 5%/step]		
003	Image Transfer: Thick 2 & FINE	*ENG	Not used		
004	Image Transfer: P/M Pattern	*ENG	[10 to 250 / <b>100</b> / 5%/step] P/M Pattern: When doing the process control or automatic line position		

	adjustment
	adjustment.

	[Common: MH]			
2384	Adjusts the environment coefficient for each mode. When the environment detected as MH, SP2351 and SP2357 are multiplied by these SP values.			
001	Image Transfer: Plain *ENG		[10 to 250 / <b>90</b> / 5%/step]	
002	Image Transfer: Thick 1	*ENG	[10 to 250 / <b>90</b> / 5%/step]	
003	Image Transfer: Thick 2 & FINE		Not used	
004	Image Transfer: P/M Pattern	*ENG	[10 to 250 / <b>100</b> / 5%/step] P/M Pattern: When doing the process control or automatic line position adjustment.	

	[Common: HH]				
2385	Adjusts the environment coefficient for each mode. When the environment detected as HH, SP2351 and SP2357 are multiplied by these SP values.				
001	Image Transfer: Plain	*ENG	[10 to 250 / <b>80</b> / 5%/step]		
002	Image Transfer: Thick 1	*ENG	[10 to 250 / <b>80</b> / 5%/step]		
003	Image Transfer: Thick 2 & FINE	*ENG	Not used		
004	Image Transfer: P/M Pattern	*ENG	[10 to 250 / <b>100</b> / 5%/step] P/M Pattern: When doing the process control or automatic line position adjustment.		

2401	[Plain: Bias]
2.001	Adjusts the DC voltage of the discharge plate for plain paper.

001	Separation DC: Plain (138 mm/s): 1st Side	*ENG	[0 to 5000 / <b>1000</b> / 10 –V/step]

2571	Adjusts the correction to the discharge plate current at the paper leading edge i each mode. SP2551 is multiplied by these SP values. Note The paper leading edge area can be adjusted with SP2572.		by these SP values.		
003	Separation DC: 1st Page	*ENG	[0 to 400 / <b>100</b> / 5%/step]		
004	Separation DC: 2nd Page	*ENG			

[Thick 2: Switch Timing: Lead. Edge]		:dge]	
2572			ning of the paper transfer roller/ discharge tween the erase margin area and the image
001	Paper Transfer: 1st Side	*ENG	[0 to 30 / <b>0</b> / 2 mm/step]

002	Paper Transfer: 2nd Side	*ENG
003	Separation DC: 1st Page	*ENG
004	Separation DC: 2nd Page	*ENG

	[Thick 2: Trailing Edge Correction] Thick 2 Paper: Trailing Edge Correction				
2573	Adjusts the correction to the paper transfer roller current for the paper trailing edge in each mode. SP2553 and SP2558 are multiplied by these SP values.				
001	Paper Transfer: 1st Side	*ENG	[0 to 400 / <b>100</b> / 5%/step]		
002	Paper Transfer: 2nd Side	*ENG			

	[Thick 2: Switch Timing:	Trail. E	dge]
2574	Adjusts the bias/voltage switch timing of the paper transfer roller/discharge pla at the paper trailing edge between the erase margin area and the image area		
001	Paper Transfer: 1st Side	*ENG	[–100 to 0 / <b>0</b> / 2 mm/step]
002	Paper Transfer: 2nd Side	*ENG	

[Thick 2: LL] Thick 2 Paper: LL Envi		nvironment Coefficient Adjustment		
2581	-	coefficient for each mode. When the environment is and SP2558 are multiplied by these SP values.		
001	Paper Transfer: 1st Side	*ENG	[10 to 250 / <b>80</b> / 5%/step]	
002	Paper Transfer: 2nd Side	*ENG		
2581	-	Adjusts the environment coefficient for each mode. When the environment is detected as LL, SP2551 is multiplied by these SP values.		
003	Separation DC: 1st Side	*ENG	[10 to 250 / <b>120</b> / 5%/step]	

004 Separation DC: 2nd Side	*ENG	
-----------------------------	------	--

	[Thick 2: ML] Thick 2 Paper: ML Environment Coefficient Adjustment				
2582	Adjusts the environment coefficient for each mode. When the environment is detected as ML, SP2553 and SP2558 are multiplied by these SP values.				
001	Paper Transfer: 1st Side	*ENG	[10 to 250 / <b>90</b> / 5%/step]		
002	Paper Transfer: 2nd Side	*ENG			
2582	Adjusts the environment coefficient for each mode. When the environment is detected as ML, SP2551 is multiplied by these SP values.				
003	Separation DC: 1st Page	*ENG	[10 to 250 / <b>110</b> / 5%/step]		
004	Separation DC: 2nd Page	*ENG			

	[Thick 2: MM] Thick 2 Paper: MM Environment Coefficient Adjustment				
2583	Adjusts the environment coefficient for each mode. When the environment is detected as MM, SP2553 and SP2558 are multiplied by these SP values.				
001	Paper Transfer: 1st Side	*ENG	[10 to 250 / <b>100</b> / 5%/step]		
002	Paper Transfer: 2nd Side	*ENG			
2583	Adjusts the environment coefficient for each mode. When the environment is detected as MM, SP2551 is multiplied by these SP values.				
003	Separation DC: 1st Page	*ENG	[10 to 250 / <b>100</b> / 5%/step]		
004	Separation DC: 2nd Page	*ENG			

	[Thick 2: MH] Thick 2 Paper: MH Environment Coefficient Adjustment			
2584	Adjusts the environment coefficient for each mode. When the environment is detected as MH, SP2553 and SP2558 are multiplied by these SP values.			
001	Paper Transfer: 1st Side	*ENG	[10 to 250 / <b>110</b> / 5%/step]	

002	Paper Transfer: 2nd Side	*ENG	
2584	Adjusts the environment coefficient for each mode. When the environment is detected as MH, SP2551 is multiplied by these SP values.		
003	Separation DC: 1st Page	*ENG	[10 to 250 / <b>90</b> / 5%/step]
004	Separation DC: 2nd Page	*ENG	

	[Thick 2: HH] Thick 2 Paper: HH Environment Coefficient Adjustment				
2585	Adjusts the environment coefficient for each mode. When the environment is detected as HH, SP2553 and SP2558 are multiplied by these SP values.				
001	Paper Transfer: 1st Side	*ENG	[10 to 250 / <b>120</b> / 5%/step]		
002	Paper Transfer: 2nd Side	*ENG	[		
2585	Adjusts the environment coefficient for each mode. When the environment is detected as HH, SP2551 is multiplied by these SP values.				
003	Separation DC: 1st Page	*ENG	[10 to 250 / <b>80</b> / 5%/step]		
004	Separation DC: 2nd Page	*ENG			

2601		[OHP: Bias]				
	Adjusts the DC voltage of the discharge plate for OHP.			narge plate for OHP.		
	001	Separation DC	*ENG	[0 to 5000 / <b>1500</b> / 10 –V/step]		

	[OHP: Bias: BW]			
2603	Adjusts the current for the paper transfer roller for OHP in black-and-white mode.			
001	Paper Transfer	*ENG	[0 to 200 / <b>12</b> / 1 –µA /step]	

2608 [OHP: Bias: FC]	
----------------------	--

	Adjusts the current for the paper transfer roller for OHP in full color mode.		
001	Paper Transfer	*ENG	[0 to 200 / <b>15</b> / 1 –µA /step]

	[OHP: Paper Size Correction]				
2611	Adjusts the size correction coefficient for the paper transfer roller current for each paper size. SP2603 and SP2608 are multiplied by these SP values.				
001	Paper Transfer: S1	*ENG	[100 to 600 / <b>100</b> / 5%/step] S1 size ≥ 297 mm (Paper width)		
002	Paper Transfer: S2	*ENG	[100 to 600 / <b>150</b> / 5%/step] 297 mm ≥ S2 size ≥ 275 mm (Paper width)		
003	Paper Transfer: S3	*ENG	[100 to 600 / <b>240</b> / 5%/step] 275 mm ≥ S3 size ≥ 210 mm (Paper width)		
004	Paper Transfer: S4	*ENG	[100 to 600 / <b>370</b> / 5%/step] 210 mm ≥ S4 size ≥ 148 mm (Paper width)		
005	Paper Transfer: S5	*ENG	[100 to 600 / <b>500</b> / 5%/step] 148 mm ≥ S5 size (Paper width)		

	[OHP: Leading Edge Correction] OHP: Leading Edge Correction				
2621	Adjusts the correction to the paper transfer roller current at the paper leading edge in each mode. SP2603 and SP2608 are multiplied by these SP values.  Integration of the paper leading edge area can be adjusted with SP2622.				
001	Paper Transfer	*ENG	[0 to 400 / <b>100</b> / 5%/step]		
2621	Adjusts the correction to the discharge plate current at the paper leading edge in each mode. SP2601 is multiplied by these SP values.  Note The paper leading edge area can be adjusted with SP2622.				
002	Separation DC	*ENG	[0 to 400 / <b>100</b> / 5%/step]		

	[OHP: Switch Timing: Lead. Edge]			
2622	Adjusts the bias/ voltage switch timing of the paper transfer roller/ discharge plate at the paper leading edge between the erase margin area and the image area.			
001	Paper Transfer	*ENG	[0 to 30 / <b>0</b> / 2 mm/step]	
002	Separation DC	*ENG		

	[OHP: Trailing Edge Correction] OHP: Trailing Edge Correction			
2623	Adjusts the correction to the paper transfer roller current for the paper trailing edge in each mode. SP2603 and SP2608 are multiplied by these SP values.			
001	Paper Transfer *ENG [0 to 400 / <b>100</b> / 5%/step]			

	[OHP: Switch Timing: Trail. Edge]		
2624	Adjusts the bias/voltage switch timing of the paper transfer roller/discharge pla at the paper trailing edge between the erase margin area and the image area		
001	Paper Transfer	*ENG	[–100 to 0 / <b>0</b> / 2 mm/step]

	[OHP: LL] OHP: LL Environment Coefficient Adjustment			
2631	Adjusts the environment coefficient for each mode. When the environment is detected as LL, SP2603 and SP2608 are multiplied by these SP values.			
001	Paper Transfer	*ENG	[10 to 250 / <b>80</b> / 5%/step]	
2631	Adjusts the environment coefficient for each mode. When the environment is detected as LL, SP2601 is multiplied by these SP values.			
002	Separation DC	*ENG	[10 to 250 / <b>120</b> / 5%/step]	

	[OHP: ML] OHP: ML Environment Coefficient Adjustment			
2632	Adjusts the environment coefficient for each mode When the environment is detected as ML, SP2603 and SP2608 are multiplied by these SP values.			
001	Paper Transfer	*ENG	[10 to 250 / <b>90</b> / 5%/step]	
2632	Adjusts the environment coefficient for each mode. When the environment is detected as ML, SP2601 is multiplied by these SP values.			
002	Separation DC	*ENG	[10 to 250 / <b>110</b> / 5%/step]	

	[OHP: MM] OHP: MM Environment Coefficient Adjustment			
2633	Adjusts the environment coefficient for each mode. When the environment is detected as MM, SP2603 and SP2608 are multiplied by these SP values.			
001	Paper Transfer	*ENG	[10 to 250 / <b>100</b> / 5%/step]	
2633	Adjusts the environment coefficient for each mode. When the environment is detected as MM, SP2601 is multiplied by these SP values.			
002	Separation DC	*ENG	[10 to 250 / <b>100</b> / 5%/step]	

	[OHP: MH] OHP: MH Environment Coefficient Adjustment			
2634	Adjusts the environment coefficient for each mode. When the environment is detected as MH, SP2603 and SP2608 are multiplied by these SP values.			
001	Paper Transfer	*ENG	[10 to 250 / <b>110</b> / 5%/step]	
2634	Adjusts the environment coefficient for each mode. When the environment is detected as MH, SP2601 is multiplied by these SP values.			
002	Separation DC	*ENG	[10 to 250 / <b>90</b> / 5%/step]	

	[OHP: HH] OHP Paper: HH Environment Coefficient Adjustment
2635	Adjusts the environment coefficient for each mode. When the environment is detected as HH, SP2603 and SP2608 are multiplied by these SP values.

	001	Paper Transfer	*ENG	[10 to 250 / <b>120</b> / 5%/step]
2635	5	Adjusts the environment coefficient for each mode. When the environment is detected as HH, SP2601 is multiplied by these SP values.		
	002	Separation DC	*ENG	[10 to 250 / <b>80</b> / 5%/step]

2650	[Thick 3: Bias]		
Adjusts the DC voltage of the discharge		narge plate for thick paper 3.	
001	Separation DC: Thick 3: 1st Side	*ENG	[0 to 5000 / <b>0</b> / 10 –V/step]
002	Separation DC: Thick 3: 2nd Side	*ENG	

	[Thick 3: Bias: BW]				
2651	Adjusts the current for the paper transfer roller for thick paper 3 in black-and-white mode.				
001	Paper Transfer: Thick 3: 1st Side	*ENG	[0 to 130 / <b>12</b> / 1 –µA /step]		
002	Paper Transfer: Thick 3: 2nd Side	*ENG	[0 to 130 / <b>12</b> / 1 –µA /step]		

	[Thick 3: Bias: FC]				
2652	Adjusts the current for the paper transfer roller for thick paper 3 in full color mode.				
001	Paper Transfer: Thick 3: 1st Side	*ENG	[0 to 130 / <b>15</b> / 1 –µA /step]		
002	Paper Transfer: Thick 3: 2nd Side	*ENG	[0 to 130 / <b>15</b> / 1 –µA /step]		

	[Thick 3: Paper Size Correction]			
2653	Adjusts the size correction coefficient for the paper transfer roller current for each paper size. SP2651 and SP2652 are multiplied by these SP values.			
001	Paper Transfer: Thick 3: 1st Side: S1	*ENG	[100 to 600 / <b>100</b> / 5%/step] S1 size ≥ 297 mm (Paper width)	
002	Paper Transfer: Thick 3: 1st Side: S2	*ENG	[100 to 600 / <b>160</b> / 5%/step] 297 mm ≥ S2 size ≥ 275 mm (Paper width)	
003	Paper Transfer: Thick 3: 1st Side: S3	*ENG	[100 to 600 / <b>260</b> / 5%/step] 275 mm ≥ S3 size ≥ 210 mm (Paper width)	
004	Paper Transfer: Thick 3: 1st Side: S4	*ENG	[100 to 600 / <b>430</b> / 5%/step] 210 mm ≥ S4 size ≥ 148 mm (Paper width)	
005	Paper Transfer: Thick 3: 1st Side: S5	*ENG	[100 to 600 / <b>600</b> / 5%/step] 148 mm ≥ S5 size (Paper width)	
006	Paper Transfer: Thick 3: 2nd Side: S1	*ENG	[100 to 600 / <b>100</b> / 5%/step] S1 size ≥ 297 mm (Paper width)	
007	Paper Transfer: Thick 3: 2nd Side: S2	*ENG	[100 to 600 / <b>160</b> / 5%/step] 297 mm ≥ S2 size ≥ 275 mm (Paper width)	
008	Paper Transfer: Thick 3: 2nd Side: S3	*ENG	[100 to 600 / <b>260</b> / 5%/step] 275 mm ≥ S3 size ≥ 210 mm (Paper width)	
009	Paper Transfer: Thick 3: 2nd Side: S4	*ENG	[100 to 600 / <b>430</b> / 5%/step] 210 mm ≥ S4 size ≥ 148 mm (Paper width)	
010	Paper Transfer: Thick 3: 2nd Side: S5	*ENG	[100 to 600 / <b>600</b> / 5%/step] 148 mm ≥ S5 size (Paper width)	

	[Thick 3: Leading Edge Correction] Thick 3 Paper: Leading Edge Correction
2654	Adjusts the correction to the paper transfer roller current at the paper leading edge in each mode. SP2651 and SP2652 are multiplied by these SP values.  Note The paper leading edge area can be adjusted with SP2655.

001	Paper Transfer: Thick 3: 1st Side	*ENG	[0 to 400 / <b>100</b> / 5%/step]
002	Separation DC: Thick 3: 1st Page	*ENG	
2654	Adjusts the correction to the discharge plate current at the paper leading edge in each mode. SP2650 is multiplied by these SP values. <ul> <li>Note</li> <li>The paper leading edge area can be adjusted with SP2655.</li> </ul>		
003	Paper Transfer: Thick 3: 2nd Side	*ENG	[0 to 400 / <b>100</b> / 5%/step]
004	Separation DC: Thick 3: 2nd Page	*ENG	

	[Thick 3: Switch Timing: Lead. Edge]			
2655	Adjusts the bias/ voltage switch timing of the paper transfer roller/ discharge plate at the paper leading edge between the erase margin area and the imag area.			
001	Paper Transfer: Thick 3: 1st Side	*ENG		
002	Separation DC: Thick 3: 1st Page	*ENG	[0 to 30 / <b>0</b> / 2 mm/step]	
003	Paper Transfer: Thick 3: 2nd Side	*ENG		
004	Separation DC: Thick 3: 2nd Page	*ENG		

	[Thick 3: Trailing Edge Correction] Thick 3 Paper: Trailing Edge Correction
2656	Adjusts the correction to the paper transfer roller current for the paper trailing edge in each mode. SP2651 and SP2652 are multiplied by these SP values.

	<ul><li>Note</li><li>The paper trailing</li></ul>	edge ar	ea can be adjusted with SP2657.
00	Paper Transfer: Thick 3: 1st Side	*ENG	[0 to 400 / <b>100</b> / 5%/step]
00	Paper Transfer: Thick 3: 2nd Side	*ENG	

	[Thick 3: Switch Timing: Trail. Edge]			
2657	Adjusts the bias/voltage switch timing of the paper transfer roller/discharge plat at the paper trailing edge between the erase margin area and the image area.			
001	Paper Transfer: Thick 3: 1st Side	*ENG	[–100 to 0 / <b>0</b> / 2 mm/step]	
002	Paper Transfer: Thick 3: 2nd Side	*ENG		

	[Thick 3: LL] Thick 3 Paper: LL Environment Coefficient Adjustment			
2658	Adjusts the environment coefficient for each mode. When the environm detected as LL, SP2651 and SP2652 are multiplied by these SP values			
001	Paper Transfer: Thick 3:         *ENG         [10 to 250 / 80 / 5%/step]           1st Side         *ENG         *ENG         [10 to 250 / 80 / 5%/step]			
002	Separation DC: Thick 3: 1st Side	*ENG	[10 to 250 / <b>120</b> / 5%/step]	
2658	Adjusts the environment coefficient for each mode. When the environment is detected as LL, SP2650 is multiplied by these SP values.			
003	Paper Transfer: Thick 3: 2nd Side*ENG[10 to 250 / 80 / 5%/step]			
004	Separation DC: Thick 3: 2nd Side:	*ENG	[10 to 250 / <b>120</b> / 5%/step]	

	[Thick 3: ML] Thick 3 Paper: ML Environment Coefficient Adjustment			
2659	Adjusts the environment coefficient for each mode When the environment is detected as ML, SP2651 and SP2652 are multiplied by these SP values.			
001	Paper Transfer: Thick 3: 1st Side	*ENG	[10 to 250 / <b>90</b> / 5%/step]	
002	Separation DC: Thick 3: 1st Side	*ENG	[10 to 250 / <b>110</b> / 5%/step]	
2659	Adjusts the environment coefficient for each mode. When the environment is detected as ML, SP2650 is multiplied by these SP values.			
003	Paper Transfer: Thick 3: 2nd Side *ENG [10 to 250 / <b>90</b> / 5%/step]			
004	Separation DC: Thick 3: 2nd Side:	*ENG	[10 to 250 / <b>110</b> / 5%/step]	

	[Thick 3: MM] Thick 3 Paper: MM Environment Coefficient Adjustment			
2660	Adjusts the environment coefficient for each mode. When the environm detected as MM, SP2651 and SP2652 are multiplied by these SP value			
001	Paper Transfer: Thick 3:       *ENG       [10 to 250 / 100 / 5%/step]         1st Side       *ENG			
002	Separation DC: Thick 3: 1st Side	*ENG	[10 to 250 / <b>100</b> / 5%/step]	
2660	Adjusts the environment coefficient for each mode. When the environment is detected as MM, SP2650 is multiplied by these SP values.			
003	Paper Transfer: Thick 3: 2nd Side *ENG [10 to 250 / <b>100</b> / 5%/step]			
004	Separation DC: Thick 3: 2nd Side:	*ENG	[10 to 250 / <b>100</b> / 5%/step]	

	[Thick 3: MH] Thick 3 Pap	er: MH	Environment Coefficient Adjustment	
2661	Adjusts the environment coefficient for each mode. When the environment is detected as MH, SP2651 and SP2652 are multiplied by these SP values.			
001	Paper Transfer: Thick 3: 1st Side	*ENG	[10 to 250 / <b>110</b> / 5%/step]	
002	Separation DC: Thick 3: 1st Side	*ENG	[10 to 250 / <b>90</b> / 5%/step]	
2661	Adjusts the environment coefficient for each mode. When the environment is detected as MH, SP2650 is multiplied by these SP values.			
003	Paper Transfer: Thick 3: 2nd Side	*ENG	[10 to 250 / <b>110</b> / 5%/step]	
004	Separation DC: Thick 3: 2nd Side:	*ENG	[10 to 250 / <b>90</b> / 5%/step]	

	[Thick 3: HH] Thick 3 Paper: HH Environment Coefficient Adjustment				
2662	Adjusts the environment coefficient for each mode. When the environment is detected as HH, SP2651 and SP2652 are multiplied by these SP values.				
001	Paper Transfer: Thick 3: 1st Side *ENG [10 to 250 / <b>120</b> / 5%/step]				
002	Separation DC: Thick 3: 1st Side	*ENG [ [10 to 250 / <b>80</b> / 5%/step]			
2662	Adjusts the environment coefficient for each mode. When the environment is detected as HH, SP2650 is multiplied by these SP values.				
003	Paper Transfer: Thick 3: 2nd Side*ENG[10 to 250 / 120 / 5%/step]				
004	Separation DC: Thick 3: 2nd Side:	*ENG	[10 to 250 / <b>80</b> / 5%/step]		

2751	[Special 1: Bias]			
	Adjusts the DC voltage of the discharge plate for special paper 1.			
001	Separation DC: Plain (138 mm/s): 1st Side	*ENG	[0 to 5000 / <b>1000</b> / 10 –V/step]	
002	Separation DC: Plain (138 mm/s): 2nd Side	*ENG	[0 to 5000 / <b>1500</b> / 10 –V/step]	
003	Separation DC: Fine: 1st Side	*ENG	Not used	
004	Separation DC: Fine: 2nd Side	*ENG		

2753	[Special 1: Bias: BW]				
	Adjusts the current for the paper transfer roller for special paper 1 in black-and-white mode.				
001	Paper Transfer: Plain (138 mm/s): 1st Side	*ENG	[0 to 130 / <b>20</b> / 1 –μΑ /step]		
002	Paper Transfer: Plain (138 mm/s): 2nd Side	*ENG			
003	Paper Transfer: FINE: 1st Side	*ENG	Not used		
004	Paper Transfer: FINE: 2nd Side	*ENG			

	[Special 1: Bias: FC]			
2757	Adjusts the current for the mode.	ansfer roller for special paper 1 in full color		
001	Paper Transfer: Plain (138 mm/s): 1st Side	*ENG	[0 to 130 / <b>30</b> / 1 –μA /step]	

# 21-Apr-2006

2871	[Special 3: Leading Edge Correction] Special 3 Paper: Leading Edge					
	Correction					

	Adjusts the correction to the paper transfer roller current at the paper leading edge in each mode. SP2852 and SP2857 are multiplied by these SP values.		
001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[0 to 400 / <b>100</b> / 5%/step]
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG	
003	Paper Transfer: FINE: 1st Side	*ENG	Not used
004	Paper Transfer: FINE: 2nd Side	*ENG	
005-008	Adjusts the correction to the discharge plate current at the paper leading edge in each mode. SP2851 is multiplied by these SP values.  Note  The paper leading edge area can be adjusted with SP2872.		
005	Separation DC: Thick 1 (77 mm/s): 1st Page	*ENG	[0 to 400 / <b>100</b> / 5%/step]
006	Separation DC: Thick 1 (77 mm/s): 2nd Page	*ENG	
007	Separation DC: Fine: 1st Page	*ENG	Not used
008	Separation DC: Fine: 2nd Page	*ENG	

	[Special 3: Switch Timing: Lead. Edge]			
2872	Adjusts the bias/ voltage switch timing of the paper transfer roller/ discharge plate at the paper leading edge between the erase margin area and the image area.			

001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[0 to 30 / <b>0</b> / 2 mm/step]
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG	
003	Paper Transfer: FINE: 1st Side	*ENG	Not used
004	Paper Transfer: FINE: 2nd Side	*ENG	
005	Separation DC: Thick 1 (77 mm/s): 1st Page	*ENG	[0 to 30 / <b>0</b> / 2 mm/step]
006	Separation DC: Thick 1 (77 mm/s): 2nd Page	*ENG	
007	Separation DC: Fine: 1st Page	*ENG	Not used
008	Separation DC: Fine: 2nd Page	*ENG	

	[Special 3: Trailing Edge Correction] Special 3 Paper: Trailing Edge Correction			
2873	Adjusts the correction to the paper transfer roller current for the paper trailing edge in each mode. SP2852 and SP2857 are multiplied by these SP values. Note  The paper trailing edge area can be adjusted with SP2874.			
001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[0 to 400 / <b>100</b> / 5%/step]	
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG		
003	Paper Transfer: FINE: 1st Side	*ENG	Not used	

	[Special 3: Switch Timing: Trail. Edge]			
2874	Adjusts the bias/voltage switch timing of the paper transfer roller/discharge plate at the paper trailing edge between the erase margin area and the image area.			
001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[–100 to 0 / <b>0</b> / 2 mm/step]	
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG		
003	Paper Transfer: FINE: 1st Side	*ENG	Not used	
004	Paper Transfer: FINE: 2nd Side	*ENG		

	[Special 3: LL] Special 3 Paper: LL Environment Coefficient Adjustment			
2881	Adjusts the environment coefficient for each mode. When the environment is detected as LL, SP2852 and SP2857 are multiplied by these SP values.			
001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>80</b> / 5%/step]	
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG		
003	Paper Transfer: FINE: 1st Side	*ENG	Not used	
004	Paper Transfer: FINE: 2nd Side	*ENG		
005-008	Adjusts the environment coefficient for each mode. When the environment is detected as LL, SP2851 is multiplied by these SP values.			

005	Separation DC: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>120</b> / 5%/step]
006	Separation DC: Thick 1 (77 mm/s): 2nd Side:	*ENG	
007	Separation DC: FINE: 1st Side	*ENG	Not used
008	Separation DC: FINE: 2nd Side	*ENG	

	[Special 3: ML] Special 3 Paper: ML Environment Coefficient Adjustment				
2882	Adjusts the environment coefficient for each mode When the environment is detected as ML, SP2852 and SP2857 are multiplied by these SP values.				
001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>90</b> / 5%/step]		
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG			
003	Paper Transfer: FINE: 1st Side	*ENG	Not used		
004	Paper Transfer: FINE: 2nd Side	*ENG			
005-008	Adjusts the environment coefficient for each mode. When the environment is detected as ML, SP2851 is multiplied by these SP values.				
005	Separation DC: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>110</b> / 5%/step]		
006	Separation DC: Thick 1 (77 mm/s): 2nd Side:	*ENG			
007	Separation DC: FINE: 1st Side	*ENG	Not used		

|--|

	[Special 3: MM] Special 3 Paper: MM Environment Coefficient Adjustment				
2883	Adjusts the environment coefficient for each mode. When the environment is detected as MM, SP2852 and SP2857 are multiplied by these SP values.				
001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>100</b> / 5%/step]		
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG			
003	Paper Transfer: FINE: 1st Side	*ENG	Not used		
004	Paper Transfer: FINE: 2nd Side	*ENG			
005-008	Adjusts the environment coefficient for each mode. When the environment is detected as MM, SP2851 is multiplied by these SP values.				
005	Separation DC: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>100</b> / 5%/step]		
006	Separation DC: Thick 1 (77 mm/s): 2nd Side:	*ENG			
007	Separation DC: FINE: 1st Side	*ENG	Not used		
008	Separation DC: FINE: 2nd Side	*ENG			

	[Special 3: MH] Special 3 Paper: MH Environment Coefficient Adjustment
2884	Adjusts the environment coefficient for each mode. When the environment is detected as MH, SP2852 and SP2857 are multiplied by these SP values.

001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>110</b> / 5%/step]
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG	
003	Paper Transfer: FINE: 1st Side	*ENG	Not used
004	Paper Transfer: FINE: 2nd Side	*ENG	
005-008	Adjusts the environment coefficient for each mode. When the environment is detected as MH, SP2851 is multiplied by these SP values.		
005	Separation DC: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>90</b> / 5%/step]
006	Separation DC: Thick 1 (77 mm/s): 2nd Side:	*ENG	
007	Separation DC: FINE: 1st Side	*ENG	Not used
008	Separation DC: FINE: 2nd Side	*ENG	

	[Special 3: HH] Special 3 Paper: HH Environment Coefficient Adjustment			
2885	Adjusts the environment coefficient for each mode. When the environment is detected as HH, SP2852 and SP2857 are multiplied by these SP values.			
001	Paper Transfer: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>120</b> / 5%/step]	
002	Paper Transfer: Thick 1 (77 mm/s): 2nd Side	*ENG		
003	Paper Transfer: FINE: 1st Side	*ENG	Not used	

004	Paper Transfer: FINE: 2nd Side	*ENG	
005-008	Adjusts the environment coefficient for each mode. When the environment is detected as HH, SP2851 is multiplied by these SP values.		
005	Separation DC: Thick 1 (77 mm/s): 1st Side	*ENG	[10 to 250 / <b>80</b> / 5%/step]
006	Separation DC: Thick 1 (77 mm/s): 2nd Side:	*ENG	
007	Separation DC: FINE: 1st Side	*ENG	Not used
008	Separation DC: FINE: 2nd Side	*ENG	

	[OPC Drum Brake Time]			
2901	Adjusts the time when the OPC drum motor reverses from normal rotation after job end. <b>DFU</b>			
001	Plain	*ENG		
002	Thick 1	*ENG	[100 to 1500 / <b>500</b> / 10 msec/step]	
003	Thick 2 & FINE	*ENG		

2902	[OPC Drum Reverse Time	e]	
2002	Adjusts the time for how long the OPC drum motor reverses after job end. I		
001	All: BW	*ENG	[0 to 200 / <b>40</b> / 10 msec/step]
002	All: FC	*ENG	

2903	[Image Transfer Roller Brake Time]
2000	Adjusts the time when the image transfer belt motor reverses from normal

	rotation after job end. DFU		
003	Plain	*ENG	
004	Thick 1	*ENG	[100 to 1500 / <b>500</b> / 10 msec/step]
005	Thick 2 & FINE	*ENG	

	[OPC Drum Reverse Time	e]	
2904	Adjusts the time for how long the image transfer belt motor reverses after job end. <b>DFU</b>		
003	All	*ENG	[0 to 200 / <b>30</b> / 10 msec/step]

	[ACS Setting (FC to Bk)]			
	Adjusts the threshold for moving away the image transfer belt from the color			
2907	PCUs. This SP moves the image transfer belt away from the color PCUs when			
	the number of B/W image printouts reaches the number of sheets specified with			
	this SP after consecutive full color image printouts in the full color mode.			
	If this SP is set to "0", the image transfer belt does not move away.			
001	Continuous Bk Pages	*ENG	[0 to 10 / <b>0</b> / 1 sheet/step]	

2908	[GainAdjust] Gain Adjustment of Image Transfer Belt Motor			
2000	DFU			
001	154 mm/sec	*ENG

003	115 mm/sec	*ENG	0: TGAIN: High, 1: GAIN: Low		
004	77 mm/sec	*ENG			

2930	[SecondaryFB: Threshold] Paper Transfer Roller Feed-back: Threshold Adjustment		
Adjusts the threshold between high resistance (division 1) a (division 2) at the paper transfer roller. This SP affects SP2			ζ, γ
001	Voltage	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]

	[SecondaryFB: Plain]		
2931	Adjusts the upper limit voltage for the paper transfer roller. These SPs are only used for plain paper use in full color mode.		
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]
002	Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]

	[SecondaryFB: Thin]			
2932	Adjusts the upper limit voltage for the paper transfer roller. These SPs are on used for thin paper use in full color mode.			
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]	
002	Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]	

	[SecondaryFB: Special 1]			
2933	Adjusts the upper limit voltage for the paper transfer roller. These SPs are only used for special 1 paper use in full color mode.			
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]	
002	Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]	

	[SecondaryFB: Special 2]	]	
2934	Adjusts the upper limit voltage for the paper transfer roller. These SPs are only used for special 2 paper use in full color mode.		
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]
002	Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]

2935	[SecondaryFB: Thick 1]				
2000	Adjusts the upper limit voltage for the paper transfer roller. These SPs are only				

	used for thick 1 paper use in full color mode.		
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]
002	Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]

	[SecondaryFB: Thick 2]			
2936	Adjusts the upper limit voltage for the paper transfer roller. These SPs are on used for thick 2 paper use in full color mode.			
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]	
002	Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]	

	[SecondaryFB: Thick 3]			
2937	Adjusts the upper limit voltage for the paper transfer roller. These SPs are only used for thick 3 paper use in full color mode.			
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]	
002	Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]	

	[SecondaryFB: OHP]		
2938	Adjusts the upper limit voltage for the paper transfer roller. These SPs are only used for OHP paper use in full color mode.		
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]
002	Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]

	[SecondaryFB: Special 3]		
2939	Adjusts the upper limit voltage for the paper transfer roller. These SPs are only used for special 3 paper use in full color mode.		
001	Limit Voltage: Division 1	*ENG	[0 to 7000 / <b>6000</b> / 10 –V/step]

00	2 Limit Voltage: Division 2	*ENG	[0 to 7000 / <b>5000</b> / 10 –V/step]
----	-----------------------------	------	--

## SP3-XXX (Process)

3011	[Process Cont. Manual E	xecution]
001	Normal	Executes the normal process control manually (potential control). Check the result with SP3-325-001 and 3-012-001 after executing this SP.
002	Density Adjustment	Executes the toner density adjustment manually.
003	Pre-ACC	Executes the process control that is normally done before ACC. The type of process control is selected with SP3-041-004.
004	Full MUSIC	Executes the process control that is normally done at the same time as MUSIC. This SP does the MUSIC (line position adjustment) twice.
005	Normal MUSIC	Executes the process control that is normally done at the same time as MUSIC. This SP does the MUSIC (line position adjustment) once.

	[Process Cont. Check Result] Process Control Self-check Result				
3012	Displays the result of the latest process control self-check. All colors are displayed. The results are displayed in the order "Y C M K" e.g., 11 (Y) 99 (C) 11 (M) 11 (K): The self-check for Cyan failed but the others were successful. See the troubleshooting section for details.				

001	History: Latest	*ENG

012	Lower Counter: C	*ENG	
013	Lower Counter: Y	*ENG	

	[TD Sensor Initial Set] De	eveloper	Initialization Setting
3021	Specifies the developer agitation time for each color at the developer initialization. <b>DFU</b>		
001	Agitation Time: Bk	*ENG	
002	Agitation Time: M	*ENG	[0 to 200 / <b>30</b> / 1 sec/step]
003	Agitation Time: C	*ENG	
004	Agitation Time: Y	*ENG	
005-008	Sets the execution flag of the developer initialization for each color. <b>DFU</b>		
005	Execution Flag: Bk	*ENG	[0 or 1 / <b>0</b> / 1/step]
006	Execution Flag: M	*ENG	0: Flag OFF, 1: Flag ON
007	Execution Flag: C	*ENG	This flag is cleared after executing TD sensor initialization.
008	Execution Flag: Y	*ENG	
009	Prohibition	*ENG	Enables or disables developer initialization.

	DFU
	[0 or 1 / <b>0</b> / 1/step]
	0: Enable, 1: Disable

3022	[Toner Replenishment Mo	ode] DF	Ū		
0011	Specifies the toner supply	ifies the toner supply time for each color in the toner supply mode.			
001	Number: Bk	*ENG	[0 to 30 / <b>8</b> / 1 sec/step]		
002	Number: M	*ENG			
003	Number: C	*ENG	[0 to 30 / <b>6</b> / 1 sec/step]		
004	Number: Y	*ENG			
005-008	Sets the execution flag for the toner supply mode for each color.				
005	Execution Flag: Bk	*ENG	[0 or 1 / <b>0</b> / 1/step]		
006	Execution Flag: M	*ENG	0: Flag OFF, 1: Flag ON		
007	Execution Flag: C	*ENG	This flag is cleared after executing TD sensor initialization.		
008	Execution Flag: Y	*ENG			

3041	[Process Control Type]			
001	Voltage Control *ENG	[0 or 1 / 1 / 1/step ] Alphanumeric 0: FIXED (Use the fixed values for the charge DC bias and development DC bias set with SP2-005 and SP2-229.) 1: CONTROL		
	Enables or disables potential control.			
002	LD Power Control	*ENG	<ul> <li>[0 or 1 / 1 / 1/step] Alphanumeric</li> <li>0: FIXED (at the value in SP2221-xxx)</li> <li>1: CONTROL (adjusted by process control)</li> </ul>	
	Selects the LD power conti	rol mod	9.	

004	Pre-ACC Process Control	*ENG	<ul> <li>[0 to 2 / 2 / 1/step]</li> <li>0: Not Executed</li> <li>1: Process Control</li> <li>2: TC Control (TD Adjustment)</li> <li>3: Not used</li> </ul>	
	Selects the process control mode that is done before ACC.			

3043	[TD Adjustment Mode]				
	Repeat Number: Power ON	*ENG	[0 to 9 / <b>4</b> / 1 time/step]		
001 power on. 0: Disabled, 1 to 3: Repeat numbe 4: Repeat three times (No consum			ption mode) pplied only when the toner density is too low,		
	Repeat Number:       *ENG       [0 to 9 / 3 / 1 time/step]         Initialization       *ENG				
002	<ul> <li>Specifies the maximum number of repeats of the toner density adjustment at the developer initialization.</li> <li>0: Disabled, 1 to 3: Repeat number,</li> <li>4: Repeat three times (No consumption mode)</li> <li>5: Repeat three times (Toner is supplied only when the toner density is too low, and toner is consumed only when the toner density is too dark.)</li> <li>6 to 9: Disabled</li> </ul>				
	Repeat Number: Non-use *ENG [0 to 9 / <b>0</b> / 1 time/step]				
003	<ul><li>Specifies the maximum number of repeats of the toner density adjustment in stand by mode.</li><li>0: Disabled, 1 to 3: Repeat number,</li><li>4: Repeat three times (No consumption mode)</li></ul>				

5: Repeat three times (Toner is supplied only when the toner densitiand toner is consumed only when the toner density is too dark.)         6 to 9: Disabled         Repeat Number: ACC *ENG [0 to 9 / 3 / 1 time/step]         Specifies the maximum number of repeats of the toner density adju         ACC.         004       0: Disabled, 1 to 3: Repeat number,         4: Repeat three times (No consumption mode)         5: Repeat three times (Toner is supplied only when the toner densitiand toner is consumed only when the toner density is too dark.)         6 to 9: Disabled         Repeat Number:	ustment at				
Specifies the maximum number of repeats of the toner density adju ACC. 004 0: Disabled, 1 to 3: Repeat number, 4: Repeat three times (No consumption mode) 5: Repeat three times (Toner is supplied only when the toner densit and toner is consumed only when the toner density is too dark.) 6 to 9: Disabled					
ACC. 004 0: Disabled, 1 to 3: Repeat number, 4: Repeat three times (No consumption mode) 5: Repeat three times (Toner is supplied only when the toner densit and toner is consumed only when the toner density is too dark.) 6 to 9: Disabled					
6 to 9: Disabled					
Repeat Number:					
005     Recovery         *ENG     [0 to 9 / 0 / 1 time/step]					
Not used	Not used				
Repeat Number: Job End *ENG [0 to 9 / 4 / 1 time/step]					
end. 006 0: Disabled, 1 to 3: Repeat number, 4: Repeat three times (No consumption mode)	<ul> <li>0: Disabled, 1 to 3: Repeat number,</li> <li>4: Repeat three times (No consumption mode)</li> <li>5: Repeat three times (Toner is supplied only when the toner density is too low, and toner is consumed only when the toner density is too dark.)</li> </ul>				
Repeat Number: Interrupt *ENG [0 to 9 / 0 / 1 time/step]					
007 Specifies the maximum number of repeats of the toner density adjuduring printing. <b>DFU</b>	Specifies the maximum number of repeats of the toner density adjustment during printing. <b>DFU</b>				
Toner Supply Coefficient *ENG [0 to 25.5 / 10 / 0.1 sec/step]					
Adjusts the time for the toner supply mode when a toner density is be low.	Adjusts the time for the toner supply mode when a toner density is detected to be low.				
009 Consumption pattern: Bk *ENG [0 to 255 / 5 / 1 time/step]					

	Specifies the belt mark generating time for checking the black toner density when toner density is detected to be low at the toner density adjustment.				
	Consumption pattern: M	*ENG	[0 to 255 / <b>5</b> / 1 time/step]		
010	Specifies the belt mark generating time for checking the magenta toner density when toner density is detected to be low at the toner density adjustment.				
	Consumption pattern: C	*ENG	[0 to 255 / <b>5</b> / 1 time/step]		
011		-	time for checking the cyan toner density be low at the toner density adjustment.		
	Consumption pattern: Y	*ENG	[0 to 255 / <b>5</b> / 1 time/step]		
012		0	time for checking the yellow toner density be low at the toner density adjustment.		
013	T1 Bias: Bk	*ENG	[0 to 80 / <b>20</b> / 1 μA/step]		
010	Adjusts the image transfer belt bias for Black.				
014	T1 Bias: M	*ENG	[0 to 80 / <b>20</b> / 1 μA/step]		
014	Adjusts the image transfer belt bias for Magenta.				
015	T1 Bias: C	*ENG	[0 to 80 / <b>22</b> / 1 μA/step]		
010	Adjusts the image transfer belt bias for Cyan.				
016	T1 Bias: Y	*ENG	[0 to 80 / <b>30</b> / 1 μA/step]		
010	Adjusts the image transfer belt bias for Yellow.				
017	Developer Mixing Time	*ENG	[0 to 250 / <b>10</b> / 1 sec/step]		
017	Specifies the developer mix	king tim	e at the toner density adjustment.		
	Consumption Pattern: LD: DUTY: Bk	*ENG	[0 to 15 / <b>15</b> / 1 /step]		
018	adjustment.		onsumption mode at the toner density is discharged when the detected		

	development gamma values (SP3611-001) exceed the target values (SP3611-005) by more than the specified thresholds (SP3239-009).					
	Consumption Pattern: LD: DUTY: M	*ENG	[0 to 15 / <b>15</b> / 1 /step]			
019	Adjusts the LD duty for the toner consumption mode at the toner density adjustment. In toner consumption mode, toner is discharged when the detected development gamma values (SP3611-002) exceed the target values (SP3611-006) by more than the specified thresholds (SP3239-009).					
	[0 to 15 / <b>15</b> / 1 /step]					
020	Adjusts the LD duty for the toner consumption mode at the toner density adjustment. In toner consumption mode, toner is discharged when the detected development gamma values (SP3611-003) exceed the target values (SP3611-007) by more than the specified thresholds (SP3239-009).					
	Consumption Pattern: LD: DUTY: Y	*ENG	[0 to 15 / <b>15</b> / 1 /step]			
021	Adjusts the LD duty for the toner consumption mode at the toner density adjustment. In toner consumption mode, toner is discharged when the detected development gamma values (SP3611-004) exceed the target values (SP3611-008) by more than the specified thresholds (SP3239-009).					

3044	[Toner Supply Type] Tone	er Suppl	y Type ([Color])	
	Selects the toner supply m	y method type.		
001	Bk	*ENG	[0 to 3 / 2 / 1/step] Alphanumeric	
002	М	*ENG	0: FIXED (with the supply rates stored with SP 3401)	
003	С	*ENG	1: PID (Vtref_Fixed)	

004	Y	*ENG	2: PID (Vtref_Control) 3: Not used
-----	---	------	---------------------------------------

3045	[Toner End Detection Set]			
	Enables/disables the toner alert display on the LCD.			
001	ON/OFF	*ENG	[0 or 1 / <b>0</b> / 1/step] 0: Detect, 1: Not Detect	

3101	[Toner End/Near End]			
	Displays the amount of each color toner. <b>DFU</b>			
001	Toner Replenishment: Bk	*ENG	[1 to 600 / <b>450</b> / 1 g/step]	
002	Toner Replenishment: M	*ENG		
003	Toner Replenishment: C	*ENG	[1 to 600 / <b>360</b> / 1 g/step]	
004	Toner Replenishment: Y	*ENG		
005-008	Displays the consumed amount of each color toner.			
005	Toner Consumption: Bk	*ENG		
006	Toner Consumption: M	*ENG	[0 to 3000 / <b>0</b> / 0.001 g/step]	
007	Toner Consumption: C	*ENG		
008	Toner Consumption: Y	*ENG		
009-012	Displays the remaining amount of each color toner. These are calculated by the operating times of the toner supply pumps.			
009	Toner Remaining: Bk	*ENG		
010	Toner Remaining: M	*ENG	[–50000 to 600 / <b>0</b> / 0.001 g/step]	
011	Toner Remaining: C	*ENG		
012	Toner Remaining: Y	*ENG		

013-016	Adjusts the threshold of toner near end for each color. The toner near end message appears on the LCD when the remaining toner amount reaches this threshold. When one of these SPs (SP3-101-009 to 012 or -032 to -035) reaches this threshold, toner near end is detected.			
013	Near End Threshold: Bk	*ENG		
014	Near End Threshold: M	*ENG	[0 to 600 / <b>50</b> / 1 g/step]	
015	Near End Threshold: C	*ENG		
016	Near End Threshold: Y	*ENG		
017-020	DFU			
017	Cartridge Error Threshold: Bk	*ENG		
018	Cartridge Error Threshold: M	*ENG	[–50000 to 0 / <b>–50000</b> / 1 g/step]	
019	Cartridge Error Threshold: C	*ENG		
020	Cartridge Error Threshold: Y	*ENG		
	Delta Vt Threshold	*ENG	[0 to 5 / <b>0.5</b> / 0.01 V/step]	
021	This SP is the threshold for toner end. Delta Vt: Vt-Vtref When both this SP and SP3-101-026 occur at same time, toner end is determined.			
022-025	Displays the total delta Vt (Vt-Vtref) value for each color. These are calculated by pixel counting.			
022	Delta Vt Sum: Bk	*ENG		
023	Delta Vt Sum: M	*ENG	[0 to 655 / <b>0</b> / 0.01 V/step]	
024	Delta Vt Sum: C	*ENG		
025	Delta Vt Sum: Y	*ENG		

026	Delta Vt Sum Threshold	*ENG	[0 to 255 / 10 / 1 V/step]		
027	Gamma Threshold: Coefficient	*ENG	Not used		
028-031	Displays the consumed toner amount calculated with the pixel count for each color.				
028	Pixel: Consumption: Bk	*ENG			
029	Pixel: Consumption: M	*ENG	[0 to 3000 / <b>0</b> / 0.001 g/step]		
030	Pixel: Consumption: C	*ENG			
031	Pixel: Consumption: Y	*ENG			
032-035	Displays the remaining ton	er amoı	unt for each color, using pixel count.		
032	Pixel: Remaining : Bk	*ENG			
033	Pixel: Remaining : M	*ENG	[-50000 to 600 / <b>0</b> / 0.001 g/step]		
034	Pixel: Remaining : C	*ENG			
035	Pixel: Remaining : Y	*ENG			
036-039	Adjusts the threshold of toner end for each color.				
036	End Threshold: Bk	*ENG			
037	End Threshold: M	*ENG	Not used		
038	End Threshold: C	*ENG			
039	End Threshold: Y	*ENG			
040-043	Displays the pixel M/A for e	each col	lor.		
040	Pixel M/A: Bk	*ENG			
041	Pixel M/A: M	*ENG	[0 to 1 / <b>0.4</b> / 0.001 mg/cm <sup>2</sup> /step]		
042	Pixel M/A: C	*ENG			
043	Pixel M/A: Y	*ENG			

044	Delta Vt Threshold Before Near End	*ENG	Adjusts the delta Vt (Vt – Vtref) of toner end before toner near end is detected. [0 to 5 / <b>0.5</b> / 0.01 V/step]
045	Delta Vt Sum Threshold Before Near End	*ENG	Adjusts the total delta Vt (Vt – Vtref) of toner end before toner near end is detected. [0 to 255 / <b>10</b> / 1 V/step]

	[Toner End Recovery]				
3102	Adjusts the number of times toner supply is attempted for each color when the TD sensor continues to detect toner end during toner recovery.				
001	Repeat: Bk	*ENG			
002	Repeat: M	*ENG	[1 to 20 / <b>5</b> / 1 time/step]		
003	Repeat: C	*ENG			
004	Repeat: Y	*ENG			

3131	[TE Count m: Display]			
Display the number of toner end detections for each color.				
001	Bk	*ENG		
002	М	*ENG	[0 to 99 / <b>0</b> / 1 time/step]	
003	С	*ENG		
004	Υ	*ENG		

3201	[TD Sensor: Vt Display]			
0201	Display the current voltage of the TD sensor for each color.			
001	Current: Bk	*ENG	[0 to 5.5 / <b>0.01</b> / 0.01 V/step]	
002	Current: M	*ENG		

003	Current: C	*ENG
004	Current: Y	*ENG

3211	[Vt Shift: Display/Set]			
	Adjusts the Vt correction value for each line speed.			
001	Thick 1 Shift: Bk	*ENG		
002	Thick 1 Shift: M	*ENG	[0 to 5 / <b>0.21</b> / 0.01 V/step]	
003	Thick 1 Shift: C	*ENG		
004	Thick 1 Shift: Y	*ENG		
005	Thick 2 & FINE Shift: Bk	*ENG		
006	Thick 2 & FINE Shift: M	*ENG	[0 to 5 / <b>0.21</b> / 0.01 V/step]	
007	Thick 2 & FINE Shift: C	*ENG		
008	Thick 2 & FINE Shift: Y	*ENG		

3221	[Vtcnt: Display/Set]			
0221	Displays or adjusts the current Vtcnt value for each color.			
001	Current: Bk	*ENG		
002	Current: M	*ENG	[2 to 5 / <b>4</b> / 0.01 V/step]	
003	Current: C	*ENG		
004	Current: Y	*ENG		
005-008	Displays or adjusts the Vtcnt value for each color at developer initialization. <b>DFU</b>			
005	Initial: Bk	*ENG	[2 to 5 / <b>4</b> / 0.01 V/step]	
006	Initial: M	*ENG		
007	Initial: C	*ENG		

008	Initial: Y	*ENG	
-----	------------	------	--

3222	[Vtref: Display/Set]			
Displays or adjusts the current Vtref value for each color.			ef value for each color.	
001	Current: Bk	*ENG		
002	Current: M	*ENG	[0 to 5.5 / <b>3</b> / 0.01 V/step]	
003	Current: C	*ENG		
004	Current: Y	*ENG		
005-008	Displays or adjusts the Vtref value for each color at developer initialization. <b>DFU</b>			
005	Initial: Bk	*ENG		
006	Initial: M	*ENG	[0 to 5.5 / <b>3</b> / 0.01 V/step]	
007	Initial: C	*ENG		
008	Initial: Y	*ENG		
009-012	Displays and adjusts Vtref	correcti	on by pixel coverage for each color. <b>DFU</b>	
009	Pixel Correction: Bk	*ENG		
010	Pixel Correction: M	*ENG	[-5 to 5.5 / <b>0</b> / 0.01 V/step]	
011	Pixel Correction: C	*ENG		
012	Pixel Correction: Y	*ENG		

3223	[Vtref Upper Lower: Set] DFU			
0110	Adjusts the lower or upper	upper limit value of Vtref for each color.		
001	Lower: Bk	*ENG	[0 to 5 / <b>2</b> / 0.01 V/step]	
002	Lower: M	*ENG		
003	Lower: C	*ENG		

Service Tables

004	Lower: Y	*ENG			
005	Upper: Bk	*ENG			
006	Upper: M	*ENG	[0 to 5 / <b>4</b> / 0.01 V/step]		
007	Upper: C	*ENG			
008	Upper: Y	*ENG			
009	Initial TC	*ENG	Adjusts the initial toner concentration. [1 to 15 / <b>7</b> / 0.1 wt%/step]		
010	Upper: TC	*ENG	Adjusts the upper limit of the toner concentration. [1 to 15 / <b>10.5</b> / 0.1 wt%/step]		
011	Lower: TC	*ENG	Adjusts the lower limit of the toner concentration. [1 to 15 / <b>4</b> / 0.1 wt%/step]		
012	Upper Sensitivity	*ENG	Adjusts the upper limit of the TD sensor sensitivity. [0.2 to 0.5 / <b>0.44</b> / 0.001 V/wt% /step]		
013	Lower Sensitivity	*ENG	Adjusts the lower limit of the TD sensor sensitivity. [0.2 to 0.5 / <b>0.209</b> / 0.001 V/wt% /step]		
014	Toner Density Between H and M	*ENG	[1 to 10 / <b>3.4</b> / 0.1 wt%/step]		
015	Toner Density Between M and L	*ENG	[1 to 10 / <b>4.3</b> / 0.1 wt%/step]		

3224	[Vtref Correction: Pixel] DFU				
	Adjusts the coefficient of Vtref correction for each coverage and color.				
001	Low Coverage Coefficient: Bk *ENG [0 to 5 / 1 / 0.1 /step]		[0 to 5 / <b>1</b> / 0.1 /step]		

			217.012000

	Enables or disables each adjustment at toner near end.		
001	Process Control	*ENG	[0 or 1 / <b>0</b> / 1/step]
002	MUSIC	*ENG	0: Permit (adjustment is done even toner near end condition)
003	TC Adj.	*ENG	1: Forbid (adjustment is not done at toner near end condition)

	[Initial Process Control Setting]			
3522	Adjusts the threshold for the process control at power on. When the current condition has changed by more than the values of these SPs when compared with the conditions at the previous operation, the process control at power on is executed.			
002	Non-use Time Setting	*ENG	[0 to 1440 / <b>360</b> / 1 minute/step]	
003	Temperature Range	*ENG	[0 to 99 / <b>10</b> / 1°C/step]	
004	Relative Humidity Range	*ENG	[0 to 99 / <b>50</b> / 1 %RH/step]	
005	Absolute Humidity Range	*ENG	[0 to 99 / <b>6</b> / 1 g/m <sup>3</sup> /step]	

	[Non-use Time Process Control Setting]				
3531	Adjusts the threshold for the process control at stand-by. When the current condition has changed by more than the values of these SPs when compared with the conditions at the previous operation, the process control at stand-by is executed.				
001	Non-use Time Setting	*ENG	[0 to 1440 / <b>360</b> / 1 minute/step]		
002	Temperature Range	*ENG	[0 to 99 / <b>10</b> / 1°C/step]		
003	Relative Humidity Range	*ENG	[0 to 99 / <b>50</b> / 1 %RH/step]		
004	Absolute Humidity Range	*ENG	[0 to 99 / <b>6</b> / 1 g/m <sup>3</sup> /step]		
005	Maximum Execution Number	*ENG	Adjusts the maximum execution time for the process control at stand-by. [0 to 99 / <b>10</b> / 1 time/step]		

3611	[Development Gamma: Display/Set]		
001	Bk (Current)	*ENG	
002	M (Current)	*ENG	Displays the current development gamma for each color.
003	C (Current)	*ENG	[0 to 5 / - / 0.01 mg/cm <sup>2</sup> /kV /step]
004	Y (Current)	*ENG	
005	Bk (Target Display)	*ENG	Displays the target development gamma for
006	M (Target Display)	*ENG	each color. [0 to 5 / <b>0.85</b> / 0.01 mg/cm²/kV /step]
007	C (Target Display)	*ENG	Displays the target development gamma for
008	Y (Target Display)	*ENG	each color. [0 to 5 / <b>0.8</b> / 0.01 mg/cm²/kV /step]
009	Bk (Standard Target Set)	*ENG	Displays the standard target development gamma for each color. [0 to 5 / <b>0.9</b> / 0.01 mg/cm <sup>2</sup> /kV /step]

010	M (Standard Target Set)	*ENG	
011	C (Standard Target Set)	*ENG	[0 to 5 / <b>0.8</b> / 0.01 mg/cm <sup>2</sup> /kV /step]
012	Y (Standard Target Set)	*ENG	
013	Environmental Correction	*ENG	Turns on or off the environmental correction for target development gamma. [0 or 1 / <b>1</b> / - ] 0: Not Correct, 1: Correct

3612	[Vk Display]				
0012	Displays Vk for each color.				
001	Bk	*ENG			
002	М	*ENG	[-300 to 300 / - / 1 V/step]		
003	С	*ENG			
004	Υ	*ENG			

3621	[Development DC Control: Display] Plain: 138 mm/sec, Thick 2 and Fin: 77 mm/sec			
0021	Displays the development DC bias adjusted with the process control for each line speed and color.			
001	Plain: Bk	*ENG		
002	Plain: M	*ENG	[0 to 700 / <b>550</b> / 1 -V/step]	
003	Plain: C	*ENG		
004	Plain: Y	*ENG		
009	Thick 2 & FINE: Bk	*ENG	[0 to 700 / <b>550</b> / 1 -V/step]	
010	Thick 2 & FINE: M	*ENG		
011	Thick 2 & FINE: C	*ENG		

|--|

3631	[Charge DC Control: Display] Plain: 138 mm/sec, Thick 2 and Fin: 77 mm/sec Displays the charge DC voltage adjusted with the process control for each line speed and color.			
0001				
001	Plain: Bk	*ENG		
002	Plain: M	*ENG	[0 to 2000 / <b>690</b> / 1 -V/step]

# SP4-XXX (Scanner)

4008	[Sub Scan Magnification Adjustment]		
Adjusts the sub-scan magnification by changing the scanner motor			n by changing the scanner motor speed.
001	Sub Scan Magnification *CTL Adjustment		[-1.0 to 1.0 / <b>0</b> / 0.1%/step] <b>FA</b>

4010	[Leading Edge Registration Adjustment]
------	--

	Adjusts the leading edge registration by changing the scanning start timing in the sub-scan direction.		
001		*CTL	[-2.0 to 3.0 / <b>0</b> / 0.1 mm/step] <b>FA</b>

	[Side-to-Side registration Adjustment]			
4011	Adjusts the side-to-side registration by changing the scanning start timing ir main scan direction.			
001		*CTL	[-2.5 to 2.5 / <b>0</b> / 0.1 mm/step ] <b>FA</b>	

	[Scanner Erase Margin: Scale] Scanner: Erase Margin: Scale				
4012	Sets the blank margin at ea the gap between the origin	e for erasing the original shadow caused by he scale.			
001	Book: Leading Edge	*ENG			
002	Book: Trailing Edge		[0 to 3.0 / <b>0</b> / 0.1 mm/step ] <b>FA</b>		
003	Book: Left	2.10			
004	Book: Right				
005	ADF: Leading Edge				
007	ADF: Right	*ENG	[0 to 3.0 / <b>0</b> / 0.1 mm/step ] <b>FA</b>		
008	ADF: Left				

	[Scanner Free Run]		
4013	mode.		n the exposure lamp on or off in the following
	Full color mode / Full Size / A3 or DLT		
001	Lamp: ON		

-			
	000		
	002	Lamp: OFF	

4014	[Scan]			
	Execute the scanner free fun with each mode.			
001	HP Detection Enable	-	Scanner free run with HP sensor check.	
002	HP Detection Disable	-	Scanner free run without HP sensor check.	

4020	[Dust Check]		
001	Detection: ON/OFF	*ENG	Turns the ADF scan glass dust check on/ off. [0 or 1 / <b>0</b> / 1 /step] 0: OFF, 1: ON
002	Dust Detect: Level	*ENG	Selects the detect level. [0 to 8 / <b>4</b> / 1 /step] 0: lowest detection level 8: highest detection level
003	Correction Level	*ENG	Selects the level of the sub scan line correction when using the ARDF. [0 to 4 / <b>0</b> / 1 /step] 0: Off 1: Weakest 2: Weak 3: Strong 4: Strongest

	[APS Operation Check]			
<b>4301</b> Displays a code that represents the original size detected by the sensors. (See Input Check Table.)		с , с		
001	APS Operation Check	-	-	

	[APS Min Size (A5/HLT/16K)]			
<b>4303</b> Specifies the result of the detection when the outputs from the origin are all OFF.				
001	APS Min. Size <b>(A5/HLT/16K)</b>	*ENG	[0 to 2 / <b>0</b> / 1 /step] 0: No Original 1: A5-Lengthwise (16K SEF if 4305 is set to 3) 2: A5-Sideways (16K LEF if 4305 is set to 3)	

4305	[8K/16K Detection]	*ENG	[0 to 3 / <b>0</b> / 1 /step] 0: Normal Detection (the machine detects A4/LT size as A4 or LT, depending on the paper size setting) 1: A4-Sideways LT-Lengthwise 2: LT-Sideways A4-Lengthwise 3: 8K 16K
001	This program enables the machine to automatically recognize the 8K/16K size.		

	[Scanner Erase Margin]	*ENG			
4400	Set the Mask for Original. These SPs set the area to	o be masked during platen (book) mode scanning			
001	Book: Leading Edge				
002	Book: Trailing Edge	[0 to 3.0 / <b>0</b> / 0.1 mm/step]			
003	Book: Left				
004	Book: Right				
005	ADF: Leading Edge				
007	ADF: Right				
008	ADF: Left				

4417	[IPU Test Pattern]					
	Selects the BICU test pattern.					
001	Test Pattern Selection	[0 to 24 / <b>0</b> / 1/step ] 0: Scanned image 1: Gradation main scan A 2: Gradation main scan B 3: Gradation main scan C 4: Gradation main scan D 5: Gradation sub scan (1) 6: Grid pattern 7: Slant grid pattern 8: Gradation RGBCMYK 9: UCR pattern 10: Color patch 16 (1) 11: Color patch 16 (2) 12: Color patch 64	<ul> <li>13: Grid pattern CMYK</li> <li>14: Color patch CMYK</li> <li>15: Gray pattern (1)</li> <li>16: Gray pattern (2)</li> <li>17: Gray Pattern (3)</li> <li>18: Shading pattern</li> <li>19: Thin line pattern</li> <li>20: Scanned + Grid pattern</li> <li>21: Scanned + Gray scale</li> <li>22: Scanned + Color patch</li> <li>23: Scanned + Slant Grid C</li> <li>24: Scanned + Slant Grid D</li> </ul>			

4429	[ICI Output Selection]		
	Adjusts the ICI output density level.		
001	-	*ENG	[32 to 255 / <b>128</b> / 1 /step] 255: Strongest density

4440	[Saturation Adjustment]				
	Adjusts the level of saturation for copying.				
001	Saturation Adj. 1	*ENG	[0 to 5 / <b>3</b> / 1 /step] 0: High 1: Lowest 2: Lower 3: Default 4: Higher 5: Highest		

4450	[Scan Image Pass Selection]				
001	Black Subtraction ON/OFF [0 or 1 / 1 / -] 0: OFF, 1: ON				
001	Uses or does not use the black reduction image path.				
002	SH ON/OFF [0 or 1 / 0 / 1 /step] 0: ON, 1: OFF				
002	Uses or does not use the shading image path.				

	[Digital AE Set] DFU			
4460	Specifies the level of deleting the background in the ADS mode. You can adjust its level for each scanning method (platen, ADF).			
001	Lower Limit	*ENG	[0 to 1024 / <b>364</b> / 4 digit/step]	
002	Background Level	*ENG	[512 to 1532 / <b>972</b> / 1 digit/step]	

4501	[ACC Target Density]				
4001	Selects the ACC result.				
001	Copy: Bk: Text	*ENG			
002	Copy: M: Text	*ENG			
003	Copy: C: Text	*ENG			
004	Copy: Y: Text	*ENG	[0 to 10 / <b>5</b> / 1 /step]

4600		[SBU Version Display]		
00	01	-	-	Displays the ID of the SBU.

4602	[Scanner Memory Access]		
001	Scanner Memory Access	-	Enables the read and write check for the SBU registers.
002	Address Set	-	Not used
003	Data Set	-	

4603	[AGC Execution]
------	-----------------

001	HP Detection Enable	-	Executes the AGC.
002	HP Detection Disable	-	DFU

4604	[FGATE Open/Close] DFU		
001	-	-	Opens or closes the FGATE signal. This SP automatically returns to the default status (close) after exiting this SP. [0 or 1 / <b>0</b> / 1/step] 0: OFF, 1: ON

4606	[White Balance Target: R] DFU		
001	-	*ENG	This value is the target value of red for the white level adjustment. [0 to 1024 / <b>784</b> / 1 digit/step]

4607	[White Balance Target: G] DFU		
001	-	*ENG	This value is the target value of green for the white level adjustment. [0 to 1024 / <b>784</b> / 1 digit/step]

4608	[White Balance Target: B] DFU		
001	-	*ENG	This value is the target value of blue for the white level adjustment. [0 to 1024 / <b>784</b> / 1 digit/step]

4623	<b>[Black Level Fine Adj. Display]</b> RE: Red Even signal, RO: Red Odd signal		
001	Latest: RE Color	-	Displays the black offset value (rough adjustment) for the even red signal in the

			CCD circuit board (color printing speed). [0 to 255 / <b>128</b> / 1 digit/step]
002	Latest: RO Color	-	Displays the black offset value (rough adjustment) for the odd red signal in the CCD circuit board (color printing speed).
003	Latest: RE Color	-	Displays the black offset value (fine adjustment) for the even red signal in the CCD circuit board (color printing speed).
004	Latest: RO Color	-	Displays the black offset value (fine adjustment) for the odd red signal in the CCD circuit board (color printing speed).
005	Latest: RE BW	-	Displays the black offset value (rough adjustment) for the even red signal in the CCD circuit board (black and white printing speed). [0 to 255 / <b>128</b> / 1 digit/step]
006	Latest: RO BW	-	Displays the black offset value (rough adjustment) for the odd red signal in the CCD circuit board (black and white printing speed).
007	Latest: RE BW	-	Displays the black offset value (fine adjustment) for the even red signal in the CCD circuit board (black and white printing speed).
008	Latest: RO BW	-	Displays the black offset value (fine adjustment) for the odd red signal in the CCD circuit board (black and white printing speed).

4624	[Black Level Rough Adj. Display]			
4024	GE: Green Even signal, GO: Green Odd signal			

001	Latest: GE Color	-	Displays the black offset value (rough adjustment) for the even green signal in the CCD circuit board (color printing speed). [0 to 255 / <b>128</b> / 1 digit/step]
002	Latest: GO Color	-	Displays the black offset value (rough adjustment) for the odd green signal in the CCD circuit board (color printing speed).
003	Latest: GE Color	-	Displays the black offset value (fine adjustment) for the even green signal in the CCD circuit board (color printing speed).
004	Latest: GO Color	-	Displays the black offset value (fine adjustment) for the odd green signal in the CCD circuit board (color printing speed).
005	Latest: GE BW	-	Displays the black offset value (rough adjustment) for the even green signal in the CCD circuit board (black and white printing speed). [0 to 255 / <b>128</b> / 1 digit/step]
006	Latest: GO BW	-	Displays the black offset value (rough adjustment) for the odd green signal in the CCD circuit board (black and white printing speed).
007	Latest: GE BW	-	Displays the black offset value (fine adjustment) for the even green signal in the CCD circuit board (black and white printing speed).
008	Latest: GO BW	-	Displays the black offset value (fine adjustment) for the odd green signal in the CCD circuit board (black and white printing speed).

4625		[Black Level Rough Adj. Display] BE: Blue Even signal, BO: Blue Odd signal	
001	Latest: BE Color	-	Displays the black offset value (rough adjustment) for the even blue signal in the CCD circuit board (color printing speed). [0 to 255 / <b>128</b> / 1 digit/step]
002	Latest: BO Color	-	Displays the black offset value (rough adjustment) for the odd blue signal in the CCD circuit board (color printing speed).
003	Latest: BE Color	-	Displays the black offset value (fine adjustment) for the even blue signal in the CCD circuit board (color printing speed).
004	Latest: BO Color	-	Displays the black offset value (fine adjustment) for the odd blue signal in the CCD circuit board (color printing speed).
005	Latest: BE BW	-	Displays the black offset value (rough adjustment) for the even blue signal in the CCD circuit board (black and white printing speed). [0 to255 / <b>128</b> / 1 digit/step]
006	Latest: BO BW	-	Displays the black offset value (rough adjustment) for the odd blue signal in the CCD circuit board (black and white printing speed).
007	Latest: BE BW	-	Displays the black offset value (fine adjustment) for the even blue signal in the CCD circuit board (black and white printing speed).
008	Latest: BO BW	-	Displays the black offset value (fine adjustment) for the odd blue signal in the CCD circuit board (black and white printing

	speed)
	spece).

4628	[Gain Adjustment]			
1020	Displays the gain value of the amplifiers on the controller for Red.			
001	Latest: RE Color	-		
002	Latest: RO Color	-	[0 to 255 / <b>0</b> / 1 digit/step]	
003	Latest: RE BW	-		
004	Latest: RO BW	-		

4629	[Gain Adjustment]			
1020	Displays the gain value of the amplifiers on the controller for Green.			
001	Latest: GE Color	-		
002	Latest: GO Color	-	[0 to 255 / <b>0</b> / 1 digit/step]	
003	Latest: GE BW	-		
004	Latest: GO BW	-		

4630	[Gain Adjustment]			
	Displays the gain value of the amplifiers on the controller for Blue.			
001	Latest: BE Color	-		
002	Latest: BO Color	-	[0 to 255 / <b>0</b> / 1 digit/step]	
003	Latest: BE BW	-		
004	Latest: BO BW	-		

4640	[Black Level Adj. Loop] Black Level Adjustment Loop Counter			
	Displays the black level adjustment time for each mode.			

	The black level adjustment is done twice. The 1st adjustment decides the reference value for the 2nd adjustment.		
001	Adj. 1 Number: Color	-	1st adjustment
002	Adj. 1 Number: BW	-	[0 to 20 / <b>0</b> / 1 /step]
003	Adj. 2 Number: Color	-	2nd adjustment
004	Adj. 2 Number: BW	-	[0 to 20 / <b>0</b> / 1 /step]

4641	[White Level Adj. Loop] White Level Adjustment Loop Counter		
	Displays the white level adjustment time for each mode.		
001	Adj. Number: Color	-	[0 to 20 / <b>0</b> / 1 /step]
002	Adj. Number: BW	-	

	[Scan Adj. Time Out Error]				
4646	Displays the result of the AGC adjustment. If the AGC adjustment fails, SC141 (B/W mode) or SC142 (Color mode) occu				
001	Black Offset Correction 1	-			
002	Black Offset Correction 2	-	[0 or 1 / <b>0</b> / 1/step] 0: OK, 1: AGC adjustment failure		
003	White Offset Correction	-			

4647	[Read Hard Error]		
	Displays the result of the SBU connection check.		
001	Power-ON	-	[0 or 1 / <b>0</b> / 1/step] 0: OK, 1: SBU connection check failure If the SBU connection check fails, SC141-001, -002 or -003 occurs.

067	CER	T: Up State	
	Disp	lays the status of the certification update.	
	0	The certification used by Cumin is set correctly.	
	1	The certification request (setAuthKey) for update has been received from the GW URL and certification is presently being updated.	
	2	The certification update is completed and the GW URL is being notified of the successful update.	
	3	The certification update failed, and the GW URL is being notified of the failed update.	
	4 The period of the certification has expired and new request for update is being sent to the GW URL.		
	11A rescue update for certification has been issued and a rescue certification setting is in progress for the rescue GW connection12The rescue certification setting is completed and the GW URL is notified of the certification update request.		
	13	The notification of the request for certification update has completed successfully, and the system is waiting for the certification update request from the rescue GW URL.	
	14	The notification of the certification request has been received from the rescue GW controller, and the certification is being stored.	
	15	The certification has been stored, and the GW URL is being notified of the successful completion of this event.	
	16	The storing of the certification has failed, and the GW URL is being notified of the failure of this event.	
	17	The certification update request has been received from the GW URL.	

		the GW URL was notified of the results of the update after it was completed, but an certification error has been received, and the rescue certification is being recorded.		
	18		ation of No. 17 has been recorded, and the GW URL the failure of the certification update.	
	CER	ERT: Error		
	-	lays a number code e certification.	that describes the reason for the request for update	
	0	Normal. There is no	o request for certification update in progress.	
	1	Request for certifica expired.	ation update in progress. The current certification has	
068	2	An SSL error notification has been issued. Issued after the certificatio has expired.		
	3	Notification of shift certification.	from a common authentication to an individual	
	4	Notification of a cor	nmon certification without ID2.	
	5	Notification that no certification was issued.		
	6	Notification that GV	V URL does not exist.	
069	CER	T: Up ID	The ID of the request for certification.	
083	Firm	ware Up Status	Displays the status of the firmware update.	
084	Non-HDD Firm Up Firm Up User Check		This setting determines if the firmware can be updated, even without the HDD installed. 0: Not allowed update 1: Allowed update	
085			This SP setting determines if the operator can confirm the previous version of the firmware before the firmware update execution. If the option to confirm the previous version is selected, a	

		notification is sent to the system manager and the firmware update is done with the firmware files from the URL.	
086	Firmware Size	Allows the service technician to confirm the size of the firmware data files during the firmware update execution.	
087	CERT: Macro Version	Displays the macro version of the NRS certification.	
088	CERT: PAC Version	Displays the PAC version of the NRS certification.	
089	CERT: ID2 Code	Displays ID2 for the NRS certification. Spaces are displayed as underscores (_). Asteriskes () indicate that no NRS certification exists.	
090	CERT: Subject	Displays the common name of the NRS certification subject. CN = the following 17 bytes. Spaces are displayed as underscores (_). Asterisks () indicate that no DESS exists.	
091	CERT: Serial Number	Displays serial number for the NRS certification. Asterisks () indicate that no DESS exists.	
092	CERT: Issuer	Displays the common name of the issuer of the NRS certification. CN = the following 30 bytes. Asteriskes () indicate that no DESS exists.	
093	CERT: Valid Start	Displays the start time of the period for which the current NRS certification is enabled.	
094	CERT: Valid End	Displays the end time of the period for which the current NRS certification is enabled.	
	Selection Country Select from the list the name of the country where Cumin-M is installed in the machine. After selecting the country, you must also set the following SP codes for Cumin-M: SP5816-153 SP5816-154		
150			

	<ul> <li>SP5816-161</li> <li>0: Japan, 1: USA, 2: Canada, 3: UK, 4: Germany, 5: France, 6: Italy,</li> <li>7: Netherlands, 8: Belgium, 9: Luxembourg, 10: Spain</li> </ul>
	Line Type Authentication Judgment
151	<ul> <li>Touch [Execute].</li> <li>Setting this SP classifies the telephone line where Cumin-M is connected as either dial-up or push type, so Cumin-M can automatically distinguish the number that connects to the outside line.</li> <li>The current progress, success, or failure of this execution can be displayed with SP5816-152.</li> <li>If the execution succeeded, SP5816-153 will display the result for confirmation and SP5816-154 will display the telephone number for the connection to the outside line.</li> </ul>
	Line Type Judgment Result
152	Displays a number to show the result of the execution of SP5816 151. Here is a list of what the numbers mean. 0: Success 1: In progress (no result yet). Please wait. 2: Line abnormal 3: Cannot detect dial tone automatically 4: Line is disconnected 5: Insufficient electrical power supply 6: Line classification not supported 7: Error because fax transmission in progress – ioctl() occurred. 8: Other error occurred 9: Line classification still in progress. Please wait.
153	Selection Dial/Push This SP displays the classification (tone or pulse) of the telephone line to the access point for Cumin-M. The numbered displayed (0 or 1) is the result of the execution of SP5816 151. However, this setting can also be changed manually. [0 to 1/ <b>0</b> / 1 /step]

	0: Tone Dialing Phone 1: Pulse Dialing Phone Inside Japan "2" may also be displayed: 0: Tone Dialing Phone 1: Pulse Dialing Phone 10PPS 2: Pulse Dialing Phone 20PPS
	Outside Line/Outgoing Number
154	<ul> <li>The SP sets the number that switches to PSTN for the outside connection for Cumin-M in a system that employs a PBX (internal line).</li> <li>If the execution of SP5816 151 has succeeded and Cumin-M has connected to the external line, this SP display is completely blank.</li> <li>If Cumin-M has connected to an internal line, then the number of the connection to the external line is displayed.</li> <li>If Cumin-M has connected to an external line, a comma is displayed with the number. The comma is inserted for a 2 sec. pause.</li> <li>The number setting for the external line can be entered manually (including commas).</li> </ul>
	Dial Up User Name
156	<ul> <li>Use this SP to set a user name for access to remote dial up. Follow these rules when setting a user name:</li> <li>Name length: Up to 32 characters</li> <li>Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").</li> </ul>
	Dial Up Password
157	<ul> <li>Use this SP to set a password for access to remote dial up. Follow these rules when setting a user name:</li> <li>Name length: Up to 32 characters</li> <li>Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").</li> </ul>
	Local Phone Number
161	Use this SP to set the telephone number of the line where Cumin-M is

	connected. This number is transmitted to and used by the Call Center to return calls. Limit: 24 numbers (numbers only)			
	Connection Timing Adjustment: Incoming			
162	When the Call Center calls out to a Cumin-M modem, it sends a repeating ID tone (*#1#). This SP sets the line remains open to send these ID tones after the number of the Cumin-M modem is dialed up and connected. [0 to 24 / <b>1</b> / 1 /step] The actual amount of time is this setting x 2 sec. For example, if you set "2" the line will remain open for 4 sec.			
	Access Point			
163	This is the number of the dial-up access point for Cumin-M. If no setting is done for this SP code, then a preset value (determined by the country selected) is used. Default: 0 Allowed: Up to 16 alphanumeric characters			
164	Line Connecting			
	<ul> <li>This SP sets the connection conditions for the customer. This setting dedicates the line to Cumin-M only, or sets the line for sharing between Cumin-M and a fax unit.</li> <li>[0 to 1 / 0 / 1 /step]</li> <li>0: Sharing Fax</li> <li>1: No Sharing Fax</li> <li>If this setting is changed, the copier must be cycled off and on.</li> <li>SP5816 187 determines whether the off-hook button can be used to interrupt a Cumin-M transmission in progress to open the line for fax transaction.</li> </ul>			
173	Modem Serial Number	This SP displays the serial number registered for the Cumin-M.		
174	Retransmission Limit			

	Normally, it is best to allow unlimited time for certification and ID2 update requests, and for the notification that the certification has been completed. However, Cumin-M generates charges based on transmission time for the customer, so a limit is placed upon the time allowed for these transactions. If these transactions cannot be completed within the allowed time, do this SP to cancel the time restriction.			
175	Modem Modulation Mode	Setting		
	FAX TX Priority	-		
187	This SP determines whether pushing the off-hook button will interrupt a Cumin-M transmission in progress to open the line for fax transaction. This SP can be used only if SP5816 164 is set to "0". [0 or 1/ <b>0</b> / - ] 0: Disable, 1: Enable			
200	Manual Polling - Executes the manual polling.			
201	<ul> <li>Regist: Status</li> <li>Displays a number that indicates the status of the NRS service device.</li> <li>0: Neither the NRS device nor Cumin device are set.</li> <li>1: The Cumin device is being set. Only Box registration is completed. In this status the Basil unit cannot answer a polling request.</li> <li>2: The Cumin device is set. In this status the Basil unit cannot answer a polling request.</li> <li>3: The NRS device is being set. In this status the Cumin device cannot be set.</li> <li>4: The NRS module has not started.</li> </ul>			
202	Letter Number	Allows entry of the number of the request needed for the Cumin device.		
203	Confirm Execute	Executes the inquiry request to the NRS GW URL		
204	Confirm Result			
	Displays a number that indicates the result of the inquiry executed with SP5816 203. 0: Succeeded			

	<ol> <li>Inquiry number error</li> <li>Registration in progress</li> <li>Proxy error (proxy enabled)</li> <li>Proxy error (proxy disabled)</li> <li>Proxy error (Illegal user name or password)</li> <li>Communication error</li> <li>Certification update error</li> <li>Other error</li> <li>Inquiry executing</li> </ol>			
205	Confirm Place Displays the result of the notification sent to the device from the GW URL in answer to the inquiry request. Displayed only when the result is registered at the GW URL.			
206	Register Execute	Executes	Cumin Registration.	
207	Register Result         Displays a number that indicates the registration result.         0: Succeeded         2: Registration in progress         3: Proxy error (proxy enabled)         4: Proxy error (proxy disabled)         5: Proxy error (Illegal user name or password)         6: Communication error         7: Certification update error         8: Other error         9: Registration executing			
208	Error Code Displays a number that describes the error code that was issued when either SP5816-204 or SP5816-207 was executed.			
	Cause	Code	Meaning	
	Illegal Modem -11001 Chat parameter error			

			21700 2000
	Parameter	-11002	Chat execution error
		-11003	Unexpected error
	Operation Error, Incorrect Setting	-12002	Inquiry, registration attempted without acquiring device status.
		-12003	Attempted registration without execution of an inquiry and no previous registration.
		-12004	Attempted setting with illegal entries for certification and ID2.
	Error Caused by Response from GW URL	-2385	Attempted dial up overseas without the correct international prefix for the telephone number.
		-2387	Not supported at the Service Center
		-2389	Database out of service
		-2390	Program out of service
		-2391	Two registrations for same device
		-2392	Parameter error
		-2393	Basil not managed
		-2394	Device not managed
		-2395	Box ID for Basil is illegal
		-2396	Device ID for Basil is illegal
		-2397	Incorrect ID2 format
		-2398	Incorrect request number format
209	@Remote Setting Clear	Releases	the machine from its Cumin setup.
250	CommLog Print	Prints the communication log.	

E

5821	[Remote Service Address]		
001	CSS-PI Device Code	*CTL	Sets the PI device code. After you change this setting, you must turn the machine off and on. [0 to 4 / <b>0</b> / 1 /step]
002	RCG IP Address		Sets the IP address of the RCG (Remote Communication Gate) destination for call processing at the remote service center.

ſ		[NV-RAM Data Upload]

5846	[UCS Settings] *CTL -			
	Machine ID (For Delivery Server) Displays ID			Displays ID
001	Displays the unique device ID in use by the delivery server directory. The value is only displayed and cannot be changed. This ID is created from the NIC MAC or IEEE 1394 EUI. The ID is displayed as either 6-byle or 8-byte binary.			
	Machine ID Clear (For De	livery S	erver)	Clears ID
002	Clears the unique ID of the device used as the name in the file transfer directory. Execute this SP if the connection of the device to the delivery server is unstable. After clearing the ID, the ID will be established again automatically by cycling the machine off and on.			
	Maximum Entries	[2	000 to 20000/ :	2000 /1 /step]
003	Changes the maximum number of entries that UCS can handle. If a value smaller than the present value is set, the UCS managed data is cleared, and the data (excluding user code information) is displayed.			
Delivery Server Retry Timer [0 to 255 / 0 / 1			[0 to 255 / <b>0</b> / 1 /step]	
006	Sets the interval for retry attempts when the delivery server fails to acquire the delivery server address book.			
	Delivery Server Retry Tim	es		[0 to 255 / <b>0</b> / 1 /step]
007	Sets the number of retry attempts when the delivery server fails to acquire the delivery server address book.			

008	Delivery Server Maximum Entries	[2000 to 50000 / <b>2000</b> / 1/step]				
	Sets the maximum number account entries of the delivery server user information managed by UCS.					
010	LDAP Search Timeout	[1 to 255 / <b>60</b> / 1 /step]				
	Sets the length of the timeout for the search of the	e LDAP server.				
	Addr Book Migration (SD -> HDD)					
040	<ul> <li>This SP moves the address book data from an SD card to the HDD. You must cycle the machine off and on after executing this SP.</li> <li>1. Turn the machine off.</li> <li>2. Install the HDD.</li> <li>3. Insert the SD card with the address book data in SD card Slot.</li> <li>4. Turn the machine on.</li> <li>5. Do SP5846 040.</li> <li>6. Turn the machine off.</li> <li>7. Remove the SD card from SD card Slot.</li> <li>8. Turn the machine on.</li> <li>Note</li> <li>Executing this SP overwrites any address book data already on the HDD with the data from the SD card.</li> <li>We recommend that you back up all directory information to an SD card with SP5846-051 before you execute this SP.After the address book data is copied to HDD, all the address book data is not erased from the SD card.</li> </ul>					
	Fill Addr Acl Info.					
041	This SP must be executed immediately after inst basic machine that previously had no HDD. The powered on with the new HDD installed, the syst address book from the NVRAM and writes it onto new address book on the HDD can be accessed administrator at this stage. Executing this SP by	first time the machine is em automatically takes the the new HDD. However, the only by the system				

	immediately after power on grants full address book access to all users.			
	Procedure			
	1. Turn the machine off.			
	2. Install the new HDD.			
	3. Turn the machine on.			
	4. The address book and its in	itial data are created on the HDD automatically.		
	5. However, at this point the ad	ddress book can be accessed by only the		
	system administrator or key op	perator.		
	6. Enter the SP mode and do	SP5846 041. After this SP executes		
	successfully, any user can acc	ess the address book.		
047	Initialize Local Addr Book	Clears the local address book information,		
		including the user code.		
0.40		Clears the distribution address book		
048	Initialize Delivery Addr Book	information, except the user code.		
049	Initialize LDAP Addr Book	Clears the LDAP address book information,		
		except the user code.		
		Clears all directory information managed by		
050	Initialize All Addr Book	UCS, including all user codes.		
051	Backup All Addr Book	Uploads all directory information to the SD		
		card.		
0.50		Downloads all directory information from the		
052	Restore All Addr Book	SD card.		
	Clear Backup Info	Deletes the address book data from the SD		
		card in the service slot.		
		Deletes only the files that were uploaded from		
053		this machine.		
		This feature does not work if the card is		
		write-protected.		
		V Note		
		<ul> <li>After you do this SP, go out of the SP</li> </ul>		
		mode, and then turn the power off.		
		<ul> <li>Do not remove the SD card until the</li> </ul>		

		Power LED stops flashing.	
	Search Option		
060	<ul> <li>This SP uses bit switches to set up the fuzzy search options for the UCS local address book.</li> <li>Bit: Meaning</li> <li>0: Checks both upper/lower case characters</li> <li>1: Japan Only</li> <li>2: Japan Only</li> <li>3: Japan Only</li> <li>4 to 7: Not Used</li> </ul>		
	Complexity Option 1		
062	<ul> <li>Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to upper case and sets the length of the password.</li> <li>[0 to 32 / 0 / 1 /step]</li> <li>Note</li> <li>This SP does not normally require adjustment.</li> <li>This SP is enabled only after the system administrator has set up a group password policy to control access to the address book.</li> </ul>		
063	Complexity Option 2 <b>DFU</b>		
064	Complexity Option 3 DFU		
065	Complexity Option 4 <b>DFU</b>		
091	FTP Auth Port Setting	Specifies the FTP port for getting a distribution server address book that is used in the identification mode. [0 to 65535 / <b>3671</b> / 1 /step]	
094	Encryption Stat	Shows the status of the encryption function for the address book data.

7801 255	Engine	-	Displays all versions and ROM numbers in SP7-910 and SP7-911.

7803	[PM Counter Display]			
	(Page, Unit, [Color])			
	Displays the number of sheets printed for each current maintenance unit. PM counters click up based on the number of A4 (LT) LEF size sheets printed. Therefore, the A3 (DLT) Double Count is activated. The Double Count cannot be deactivated. When a unit is replaced, the machine automatically detects that the new unit is installed. Then, the current PM counter value is automatically moved to the PM Counter - Previous (SP7-906-1 to 10) and is reset to "0". The total number of sheets printed with the last unit replaced can be checked with SP7-906-1 to 10. <b>NOTE</b> : The LCT is counted as the 3rd feed station.

7803 47	Measurement: Toner Collection bottle		
	Displays the value given by the following formula: (Current revolution ÷ Target revolution) × 100. This shows how much of the unit's expected lifetime has been used up. The Rotation% counter is based on rotations, not prints. If the number of rotations reaches the limit, the machine enters the end condition for that unit. If the print count lifetime is reached first, the machine also enters the end condition, even though the R% counter is still less than 100%.

## SP8-XXX: Data Log2

Many of these counters are provided for features that are currently not available, such as sending color faxes, and so on. However, here are some Group 8 codes that when used in combination with others, can provide useful information.

SP Numbers	What They Do
SP8 211 to SP8 216	The number of pages scanned to the document server.
SP8 401 to SP8 406	The number of pages printed from the document server
SP8 691 to SP8 696	The number of pages sent from the document server

Specifically, the following questions can be answered:

- How is the document server actually being used?
- What application is using the document server most frequently?
- What data in the document server is being reused?

Most of the SPs in this group are prefixed with a letter that indicates the mode of operation (the mode of operation is referred to as an "application"). Before reading the Group 8 Service Table, make sure that you understand what these prefixes mean.

Prefixes	What it means		
T:	Total: (Grand Total).	Grand total of the items counted for all applications (C, F, P, etc.)	
C:	Copy application.		
F:	Fax application.	Totals (pages, jobs, etc.) executed for each application when the job was not stored on the	
P:	Print application.	document server.	
S:	Scan application.		
L:	Local storage (document server)	Totals (jobs, pages, etc.) for the document server. The L: counters work differently case by case. Sometimes, they count jobs/pages stored on the document server; this can be in document server mode (from the document server window), or from another mode, such as from a printer driver or by pressing the Store File button in the Copy mode window. Sometimes, they include occasions when the user uses a file that is already on the document server. Each counter will be discussed case by case.	
O:	Other applications (external network applications, for example)	Refers to network applications such as Web Image Monitor. Utilities developed with the SDK (Software Development Kit) will also be counted with this group in the future.	

The Group 8 SP codes are limited to 17 characters, forced by the necessity of displaying them on the small LCDs of printers and faxes that also use these SPs. Read over the list of abbreviations below and refer to it again if you see the name of an SP that you do not understand.

## **Key for Abbreviations**

Abbreviation	What it means
1	"By", e.g. "T:Jobs/Apl" = Total Jobs "by" Application

Abbreviation	What it means	
>	More (2> "2 or more", 4> "4 or more"	
AddBook	Address Book	
Apl	Application	
B/W	Black & White	
Bk	Black	
С	Cyan	
ColCr	Color Create	
ColMode	Color Mode	
Comb	Combine	
Comp	Compression	
Deliv	Delivery	
DesApl	Designated Application. The application (Copy, Fax, Scan, Print used to store the job on the document server, for example.	
Dev Counter	Development Count, no. of pages developed.	
Dup, Duplex	Duplex, printing on both sides	
Emul	Emulation	
FC	Full Color	
FIN	Post-print processing, i.e. finishing (punching, stapling, etc.)	
Full Bleed	No Margins	
GenCopy	Generation Copy Mode	
GPC	Get Print Counter. For jobs 10 pages or less, this counter does not count up. For jobs larger than 10 pages, this counter count up by the number that is in excess of 10 (e.g., for an 11-page job the counter counts up 11-10 =1)	

Ser	vice	Tab	les

Abbreviation	What it means	
IFax	Internet Fax	
ImgEdt	Image Edit performed on the original with the copier GUI, e.g. border removal, adding stamps, page numbers, etc.	
к	Black (YMCK)	
LS	Local Storage. Refers to the document server.	
LSize	Large (paper) Size	
Мад	Magnification	
MC	One color (monochrome)	
NRS	New Remote Service, which allows a service center to monitor machines remotely. "NRS" is used overseas, "CSS" is used in Japan.	
Org	Original for scanning	
OrgJam	Original Jam	
Palm 2	Print Job Manager/Desk Top Editor: A pair of utilities that allows print jobs to be distributed evenly among the printers on the network, and allows files to moved around, combined, and converted to different formats.	
PC	Personal Computer	
PGS	Pages. A page is the total scanned surface of the original. Duplex pages count as two pages, and A3 simplex count as two pages if the A3/DLT counter SP is switched ON.	
PJob	Print Jobs	
Ppr	Paper	
PrtJam	Printer (plotter) Jam	
PrtPGS	Print Pages	

Abbreviation	What it means	
R	Red (Toner Remaining). Applies to the wide format model A2 only. This machine is under development and currently not available.	
Rez	Resolution	
SC	Service Code (Error SC code displayed)	
Scn	Scan	
Sim, Simplex	Simplex, printing on 1 side.	
S-to-Email	Scan-to-E-mail	
SMC	SMC report printed with SP5990. All of the Group 8 counters ar recorded in the SMC report.	
Svr	Server	
TonEnd	Toner End	
TonSave	Toner Save	
TXJob	Send, Transmission	
YMC	Yellow, Magenta, Cyan	
ҮМСК	Yellow, Magenta, Cyan, Black	

Vote Note

• All of the Group 8 SPs are reset with SP5 801 1 Memory All Clear.

8 001	T:Total Jobs	*CTL	These SPs count the number of times each application is used to do a job.
8 002	C:Total Jobs	*CTL	[0 to 9999999/ <b>0</b> / 1] <b>Note</b> : The L: counter is the total number of times the
8 003	F:Total Jobs	*CTL	other applications are used to send a job to the
8 004	P:Total Jobs	*CTL	document server, plus the number of times a file already on the document server is used.
8 005	S:Total Jobs	*CTL	

8 006	L:Total Jobs	*CTL	
-------	--------------	------	--

- These SPs reveal the number of times an application is used, not the number of pages processed.
- When an application is opened for image input or output, this counts as one job.
- Interrupted jobs (paper jams, etc.) are counted, even though they do not finish.
- Only jobs executed by the customer are counted. Jobs executed by the customer engineer using the SP modes are not counted.
- When using secure printing (when a password is required to start the print job), the job is counted at the time when either "Delete Data" or "Specify Output" is specified.
- A job is counted as a fax job when the job is stored for sending.
- When a fax is received to fax memory, the F: counter increments but the L: counter does not (the document server is not used).
- A fax broadcast counts as one job for the F: counter (the fax destinations in the broadcast are not counted separately).
- A fax broadcast is counted only after all the faxes have been sent to their destinations. If one transmission generates an error, then the broadcast will not be counted until the transmission has been completed.
- A printed fax report counts as one job for the F: counter.
- The F: counter does not distinguish between fax sending or receiving.
- When a copy job on the document server is printed, SP8022 also increments, and when a print job stored on the document server is printed, SP8024 also increments.
- When an original is both copied and stored on the document server, the C: and L: counters both increment.
- When a print job is stored on the document server, only the L: counter increments.
- When the user presses the Document Server button to store the job on the document server, only the L: counter increments.
- When the user enters document server mode and prints data stored on the document server, only the L: counter increments.
- When an image received from Palm 2 is received and stored, the L: counter increments.
- When the customer prints a report (user code list, for example), the O: counter increments. However, for fax reports and reports executed from the fax application, the F: counter increments.

8 011 T:Jobs/L	S *CTL	These SPs count the number of jobs stored to the
----------------	--------	--

Service Tables

8 012	C:Jobs/LS	*CTL	document server by each application, to reveal how
8 013	F:Jobs/LS	*CTL	local storage is being used for input. [0 to 9999999/ <b>0</b> / 1]
8 014	P:Jobs/LS	*CTL	The L: counter counts the number of jobs stored
8 015	S:Jobs/LS	*CTL	from within the document server mode screen at the operation panel.
8 016	L:Jobs/LS	*CTL	
8 017	O:Jobs/LS	*CTL	

- When a scan job is sent to the document server, the S: counter increments. When you enter document server mode and then scan an original, the L: counter increments.
- When a print job is sent to the document server, the P: counter increments.
- When a network application sends data to the document server, the O: counter increments.
- When an image from Palm 2 is stored on the document server, the O: counter increments.

8 021	T:Pjob/LS	*CTL	
8 022	C:Pjob/LS	*CTL	These SPs reveal how files printed from the
8 023	F:Pjob/LS	*CTL	document server were stored on the document server originally.
8 024	P:Pjob/LS	*CTL	[0 to 9999999/ <b>0</b> / 1]
8 025	S:Pjob/LS	*CTL	The L: counter counts the number of jobs stored from within the document server mode
8 026	L:Pjob/LS	*CTL	screen at the operation panel.
8 027	O:Pjob/LS	*CTL	

• When a fax is sent to the document server, the F: counter increments.

- When a copy job stored on the document server is printed with another application, the C: counter increments.
- When an application like DeskTopBinder merges a copy job that was stored on the document server with a print job that was stored on the document server, the C: and P: counters both increment.

- When a job already on the document server is printed with another application, the L: counter increments.
- When a scanner job stored on the document server is printed with another application, the S: counter increments. If the original was scanned from within document server mode, then the L: counter increments.
- When images stored on the document server by a network application (including Palm 2), are printed with another application, the O: counter increments.
- When a copy job stored on the document server is printed with a network application (Web Image Monitor, for example), the C: counter increments.
- When a fax on the document server is printed, the F: counter increments.

8 031	T:Pjob/DesApl	*CTL	
8 032	C:Pjob/DesApl	*CTL	These SPs reveal what applications were used
8 033	F:Pjob/DesApl	*CTL       to output documents from the document server.         *CTL       [0 to 99999999/ 0 / 1]         *CTL       The L: counter counts the number of journament server.	
8 034	P:Pjob/DesApl		
8 035	S:Pjob/DesApl		printed from within the document server mode
8 036	L:Pjob/DesApl	*CTL	screen at the operation panel.
8 037	O:Pjob/DesApl	*CTL	

- When documents already stored on the document server are printed, the count for the application that started the print job is incremented.
- When the print job is started from a network application (Desk Top Binder, Web Image Monitor, etc.) the L: counter increments.

8 041	T:TX Jobs/LS	*CTL	These SPs count the applications that stored
8 042	C:TX Jobs/LS	*CTL	files on the document server that were later accessed for transmission over the telephone
8 043	F:TX Jobs/LS	*CTL	line or over a network (attached to an e-mail, or
8 044	P:TX Jobs/LS	*CTL	as a fax image by I-Fax). [0 to 99999999/ <b>0</b> / 1]
8 045	S:TX Jobs/LS	*CTL	<b>Note</b> : Jobs merged for sending are counted

Service Tables

8 046	L:TX Jobs/LS	*CTL	separately.
8 047	O:TX Jobs/LS	*CTL	The L: counter counts the number of jobs scanned from within the document server mode screen at the operation panel.

- When a stored copy job is sent from the document server, the C: counter increments.
- When images stored on the document server by a network application or Palm2 are sent as an e-mail, the O: counter increments.

8 051	T:TX Jobs/DesApl	*CTL	These SPs count the applications used to send
8 052	C:TX Jobs/DesApl	*CTL	files from the document server over the
8 053	F:TX Jobs/DesApl	*CTL	telephone line or over a network (attached to an e-mail, or as a fax image by I-Fax). Jobs
8 054	P:TX Jobs/DesApl	*CTL	merged for sending are counted separately.
8 055	S:TX Jobs/DesApl	*CTL	[0 to 9999999/ <b>0</b> / 1] The L: counter counts the number of jobs sent
8 056	L:TX Jobs/DesApl	*CTL	from within the document server mode screen
8 057	O:TX Jobs/DesApl	*CTL	at the operation panel.

 If the send is started from Desk Top Binder or Web Image Monitor, for example, then the O: counter increments.

	T:FIN Jobs *CTL [0 to 9999999/ <b>0</b> / 1]		[0 to 9999999/ <b>0</b> / 1]

8 075	These SPs count and the number of pages		he numbe	r of scan jobs by size based on	
	L:Jobs/PGS	*CTL	[0 to 9999	9999/ <b>0</b> / 1]	
8 076	These SPs count and calculate the number of jobs printed from within the document server mode window at the operation panel, by the number of pages in the job.			<b>,</b>	
O:Jobs/PGS *CTL [0 to 99999999/ <b>0</b> / 1]				9999/ <b>0</b> / 1]	
8 077	These SPs count and calculate the number of "Other" application jobs (Web Image Monitor, Palm 2, etc.) by size based on the number of pages the job.			,	
8 07x 1	1 Page	8 07x 8		21 to 50 Pages	
8 07x 2	2 Pages	8 07x 9		51 to 100 Pages	

8 07x 3	3 Pages	8 07x 10	101 to 300 Pages
8 07x 4	4 Pages	8 07x 11	301 to 500 Pages
8 07x 5	5 Pages	8 07x 12	501 to 700 Pages
8 07x 6	6 to 10 Pages	8 07x 13	701 to 1000 Pages
8 07x 7	11 to 20 Pages	8 07x 14	1001 to Pages

• For example: When a copy job stored on the document server is printed in document server mode, the appropriate L: counter (SP8076 0xx) increments.

- Printing a fax report counts as a job and increments the F: counter (SP 8073).
- Interrupted jobs (paper jam, etc.) are counted, even though they do not finish.
- If a job is paused and re-started, it counts as one job.
- If the finisher runs out of staples during a print and staple job, then the job is counted at the time the error occurs.
- For copy jobs (SP 8072) and scan jobs (SP 8075), the total is calculated by multiplying the number of sets of copies by the number of pages scanned. (One duplex page counts as 2.)
- The first test print and subsequent test prints to adjust settings are added to the number of pages of the copy job (SP 8072).
- When printing the first page of a job from within the document server screen, the page is counted.

	T:FAX TX Jobs	*CTL	[0 to 9999999/ <b>0</b> / 1]
8 111		using a file	per of jobs (color or black-and-white) sent by e stored on the document server, on a available at this time.
	F: FAX TX Jobs	*CTL	[0 to 9999999/ <b>0</b> / 1]
8 113	These SPs count the total number of jobs (color or black-and-white) sent fax directly on a telephone line. <b>Note</b> : Color fax sending is not available at this time.		
8 11x 1	B/W		

### 21-Apr-2006

8 11x 2	Color
---------	-------

- These counters count jobs, not pages.
- This SP counts fax jobs sent over a telephone line with a fax application, including documents stored on the document server.
- If the mode is changed during the job, the job will count with the mode set when the job started.
- If the same document is faxed to both a public fax line and an I-Fax at a destination where both are available, then this counter increments, and the I-Fax counter (8 12x) also increments.
- The fax job is counted when the job is scanned for sending, not when the job is sent.

	T:IFAX TX Jobs	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 121	These SPs count the total number of jobs (color or black-and-white) sent, either directly or using a file stored on the document server, as fax images using I-Fax. <b>Note</b> : Color fax sending is not available at this time.				
	F: IFAX TX Jobs	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 123	These SPs count the number of jobs (color or black-and-white) sent (no stored on the document server), as fax images using I-Fax. <b>Note</b> : Color fax sending is not available at this time.				
8 12x 1	B/W				
8 12x 2	Color				

- These counters count jobs, not pages.
- The counters for color are provided for future use; the color fax feature is not available at this time.
- The fax job is counted when the job is scanned for sending, not when the job is sent.

8 131	T:S-to-Email Jobs	*CTL	[0 to 9999999/ <b>0</b> / 1]
	These SPs count the to	al numbe	er of jobs (color or black-and-white)

	scanned and attached to an e-mail, regardless of whether the document server was used or not.		
	S: S-to-Email Jobs	*CTL	[0 to 9999999/ <b>0</b> / 1]
8 135	These SPs count the number of jobs (color or black-and-white) scan and attached to e-mail, without storing the original on the document s		, , , , , , , , , , , , , , , , , , ,
8 13x 1	B/W		
8 13x 2	Color		
8 13x 3	ACS		

- These counters count jobs, not pages.
- If the job is stored on the document server, after the job is stored it is determined to be color or black-and-white then counted.
- If the job is cancelled during scanning, or if the job is cancelled while the document is waiting to be sent, the job is not counted.
- If the job is cancelled during sending, it may or may not be counted, depending on what stage of the process had been reached when the job was cancelled.
- If several jobs are combined for sending to the Scan Router, Scan-to-Email, or Scan-to-PC, or if one job is sent to more than one destination. each send is counted separately. For example, if the same document is sent by Scan-to-Email as well as Scan-to-PC, then it is counted twice (once for Scan-to-Email and once for Scan-to-PC).

	T:Deliv Jobs/Svr	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 141	These SPs count the tot scanned and sent to a S	e total number of jobs (color or black-and-white) o a Scan Router server.			
	S: Deliv Jobs/Svr *CTL [0 to 9999999/ 0 / 1]				
8 145	These SPs count the number of jobs (color or black-and-white) scanned i scanner mode and sent to a Scan Router server.				
8 14x 1	B/W				
8 14x 2	Color				

8 14x 3	ACS	
• • • • • •		

- These counters count jobs, not pages.
- The jobs are counted even though the arrival and reception of the jobs at the Scan Router server cannot be confirmed.
- If even one color image is mixed with black-and-white images, then the job is counted as a "Color" job.
- If the job is cancelled during scanning, or if the job is cancelled while the document is waiting to be delivered, the job is not counted.
- If the job is cancelled during sending, it may or may not be counted, depending on what stage of the process had been reached when the job was cancelled.
- Even if several files are combined for sending, the transmission counts as one job.

	T:Deliv Jobs/PC	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 151	These SPs count the total number of jobs (color or black-and-white) scanned and sent to a folder on a PC (Scan-to-PC). <b>Note</b> : At the present time, 8 151 and 8 155 perform identical counts.					
	S:Deliv Jobs/PC	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 155	These SPs count the total number of jobs (color or black-and-white) scanned and sent with Scan-to-PC.					
8 15x 1	B/W					
8 15x 2	Color					
8 15x 3	ACS					

- These counters count jobs, not pages.
- If the job is cancelled during scanning, it is not counted.
- If the job is cancelled while it is waiting to be sent, the job is not counted.
- If the job is cancelled during sending, it may or may not be counted, depending on what stage of the process had been reached when the job was cancelled.
- Even if several files are combined for sending, the transmission counts as one job.

Service Tables

8 161	T:PCFAX TX Jobs	*CTL	These SPs count the number of PC Fax	
8 163	F:PCFAX TX Jobs	*CTL	transmission jobs. A job is counted from when it is registered for sending, not when it is sent. [0 to 9999999/ 0 / 1] <b>Note</b> : At the present time, these counters perform identical counts.	

 This counts fax jobs started from a PC using a PC fax application, and sending the data out to the destination from the PC through the copier.

8 191	T:Total Scan PGS	*CTL	
8 192	C:Total Scan PGS	*CTL	These SPs count the pages scanned by each
8 193	F:Total Scan PGS	*CTL	application that uses the scanner to scan images.
8 195	S:Total Scan PGS	*CTL	[0 to 9999999/ <b>0</b> / 1]
8 196	L:Total Scan PGS	*CTL	

- SP 8 191 to 8 196 count the number of scanned sides of pages, not the number of physical pages.
- These counters do not count reading user stamp data, or reading color charts to adjust color.
- Previews done with a scanner driver are not counted.
- A count is done only after all images of a job have been scanned.
- Scans made in SP mode are not counted.

## Examples

- If 3 B5 pages and 1 A3 page are scanned with the scanner application but not stored, the S: count is 4.
- If both sides of 3 A4 sheets are copied and stored to the document server using the Store
   File button in the Copy mode window, the C: count is 6 and the L: count is 6.
- If both sides of 3 A4 sheets are copied but not stored, the C: count is 6.
- If you enter document server mode then scan 6 pages, the L: count is 6.

8 201 T:LSize Scan PGS	*CTL	[0 to 9999999/ <b>0</b> / 1]
------------------------	------	------------------------------

	These SPs count the total number of large pages input with the scanner for scan and copy jobs. Large size paper (A3/DLT) scanned for fax transmission are not counted. <b>Note</b> : These counters are displayed in the SMC Report, and in the User Tools display.						
	F: LSize Scan PGS	F: LSize Scan PGS *CTL [0 to 9999999/ <b>0</b> / 1]					
8 203	These SPs count the total number of large pages input with the scanner for fax transmission. <b>Note</b> : These counters are displayed in the SMC Report, and in the User Tools display.						
	S:LSize Scan PGS	[0 to 9999999/ <b>0</b> / 1]					
8 205	These SPs count the total number of large pages input with the scanner for scan jobs only. Large size paper (A3/DLT) scanned for fax transmission are not counted. <b>Note</b> : These counters are displayed in the SMC Report, and in the User Tools display.						

8 211	T:Scan PGS/LS	*CTL	These SPs count the number of pages scanned
8 212	C:Scan PGS/LS	*CTL	into the document server . [0 to 9999999/ <b>0</b> / 1]
8 213	F:Scan PGS/LS	*CTL	The L: counter counts the number of pages
8 215	S:Scan PGS/LS	*CTL	stored from within the document server mode screen at the operation panel, and with the
8 216	L:Scan PGS/LS	*CTL	Store File button from within the Copy mode screen

- Reading user stamp data is not counted.
- If a job is cancelled, the pages output as far as the cancellation are counted.
- If the scanner application scans and stores 3 B5 sheets and 1 A4 sheet, the S: count is 4.
- If pages are copied but not stored on the document server, these counters do not change.
- If both sides of 3 A4 sheets are copied and stored to the document server, the C: count is
   6 and the L: count is 6.

• If you enter document server mode then scan 6 pages, the L: count is 6.

	ADF Or	g Feeds	*CTL	[0 to 9999999/ <b>0</b> / 1]
8 221		These SPs count the number of pages fed through the ADF for front and back side scanning.		
8 221 1	Front	Number of front sides fed for scanning: With an ADF that can scan both sides simultaneously, the Front side count is the same as the number of pages fed for either simplex or duplex scanning. With an ADF that cannot scan both sides simultaneously, the Front side count is the same as the number of pages fed for duplex front side scanning. (The front side is determined by which side the user loads face up.)		
8 221 2	Back	Number of rear sides fed for scanning: With an ADF that can scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex scanning. With an ADF that cannot scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex rear-side scanning.		

- When 1 sheet is fed for duplex scanning the Front count is 1 and the Back count is 1.
- If a jam occurs during the job, recovery processing is not counted to avoid double counting. Also, the pages are not counted if the jam occurs before the first sheet is output.

	Scan PGS/Mode	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 231	These SPs count the n determine the work loa	number of pages scanned by each ADF mode to ad on the ADF.			
8 231 1	Large Volume	Selectable. Large copy jobs that cannot be loaded in the ADF at one time.			
8 231 2	SADF	Sele the A	ctable. Feeding pages one by one through \DF.		

8 231 3	Mixed Size	Selectable. Select "Mixed Sizes" on the operation panel.
8 231 4	Custom Size	Selectable. Originals of non-standard size.
8 231 5	Platen	Book mode. Raising the ADF and placing the original directly on the platen.

- If the scan mode is changed during the job, for example, if the user switches from ADF to Platen mode, the count is done for the last selected mode.
- The user cannot select mixed sizes or non-standard sizes with the fax application so if the original's page sizes are mixed or non-standard, these are not counted.
- If the user selects "Mixed Sizes" for copying in the platen mode, the Mixed Size count is enabled.
- In the SADF mode if the user copies 1 page in platen mode and then copies 2 pages with SADF, the Platen count is 1 and the SADF count is 3.

	T:Scan PGS/Org	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 241	These SPs count the total r jobs, regardless of which a	scanned pages by original type for all was used.				
	C:Scan PGS/Org	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 242	These SPs count the number of pages scanned by original type for ( jobs.					
	F:Scan PGS/Org	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 243	These SPs count the number of pages scanned by original type for Fax jobs.					
	S:Scan PGS/Org	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 245	These SPs count the number of pages scanned by original type for Scan jobs.					
8 246	L:Scan PGS/Org	*CTL	[0 to 9999999/ <b>0</b> / 1]			
	These SPs count the numb	er of page	es scanned and stored from within the			

Service Tables

	document server mode screen at the operation panel, and with the Store File button from within the Copy mode screen						
	8 241		8 242	8 243	8 245	8 246	
8 24x 1: Text		Yes	Yes	Yes	Yes	Yes	
8 24x 2: Text/	'Photo	Yes	Yes	Yes	Yes	Yes	
8 24x 3: Phot	0	Yes	Yes	Yes	Yes	Yes	
8 24x 4: GenCopy, Pale		Yes	Yes	No	Yes	Yes	
8 24x 5: Map		Yes	Yes	No	Yes	Yes	
8 24x 6: Norn	nal/Detail	Yes	No	Yes	No	No	
8 24x 7: Fine	/Super Fine	Yes	No	Yes	No	No	
8 24x 8: Bina	ry	Yes	No	No	Yes	No	
8 24x 9: Gray	vscale	Yes	No	No	Yes	No	
8 24x 10: Col	or	Yes	No	No	Yes	No	
8 24x 11: Oth	er	Yes	Yes	Yes	Yes	Yes	

 If the scan mode is changed during the job, for example, if the user switches from ADF to Platen mode, the count is done for the last selected mode.

8 251	T:Scan PGS/ImgEdt	*CTL	These SPs show how many times Image Edit
8 252	C:Scan PGS/ImgEdt	*CTL	features have been selected at the operation panel for each application. Some examples of
8 254	P:Scan PGS/ImgEdt	*CTL	these editing features are:
8 256	L:Scan PGS/ImgEdt	*CTL	<ul><li>Erase&gt; Border</li><li>Erase&gt; Center</li></ul>
8 257	O:Scan PGS/ImgEdt	*CTL	<ul> <li>Image Repeat</li> <li>Centering</li> <li>Positive/Negative</li> <li>[0 to 9999999/ 0 / 1]</li> <li>Note: The count totals the number of times the</li> </ul>

		edit features have been used. A detailed
		breakdown of exactly which features have
		been used is not given.

The L: counter counts the number of pages stored from within the document server mode screen at the operation panel, and with the Store File button from within the Copy mode screen.

8 261	T:Scan PGS/ColCr	*CTL	-	
8 262	C:Scan PGS/ ColCr	*CTL	-	
8 266	L:Scn PGS/ColCr	*CTL	-	
8 26x 1	Color Conversion			
8 26x 2	Color Erase	These SPs show how many times color crea features have been selected at the operatior panel.		
8 26x 3	Background			
8 26x 4	Other			

8 281	T:Scan PGS/TWAIN	*CTL	These SPs count the number of pages
8 285	S:Scan PGS/TWAIN	*CTL	scanned using a TWAIN driver. These counters reveal how the TWAIN driver is used for delivery functions. [0 to 9999999/ 0 / 1] <b>Note</b> : At the present time, these counters perform identical counts.

8 291	T:Scan PGS/Stamp	*CTL	These SPs count the number of pages
8 293	F:Scan PGS/Stamp	*CTL	stamped with the stamp in the ADF unit. [0 to 9999999/ <b>0</b> / 1]
8 295	S:Scan PGS/Stamp	*CTL	The L: counter counts the number of pages
8 296	L:Scan PGS/Stamp	*CTL	stored from within the document server mode screen at the operation panel, and with the Store File button from within the Copy mode

screen
--------

	T:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 301	These SPs count by size the total number of pages scanned by all applications. Use these totals to compare original page size (scanning) and output (printing) page size [SP 8-441].				
	C:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 302	These SPs count by size the total number of pages scanned by the Copy application. Use these totals to compare original page size (scanning) and output (printing) page size [SP 8-442].				
	F:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 303	These SPs count by size the total number of pages scanned by the Fax application. Use these totals to compare original page size (scanning) and output page size [SP 8-443].				
	S:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 305		Is to co	number of pages scanned by the Scan mpare original page size (scanning) and		
	L:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 306	These SPs count by size the total number of pages scanned and stored from within the document server mode screen at the operation panel, and with the Store File button from within the Copy mode screen. Use these totals to compare original page size (scanning) and output page size [SP 8-446].				
8 30x 1	A3	_			
8 30x 2	A4				
8 30x 3	A5				
8 30x 4	В4				

21-Apr-2006

8 30x 5	B5	
8 30x 6	DLT	
8 30x 7	LG	
8 30x 8	LT	
8 30x 9	HLT	
8 30x 10	Full Bleed	
8 30x 254	Other (Standard)	
8 30x 255	Other (Custom)	

	T:Scan PGS/Rez	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 311	These SPs count by resolution setting the total number of pages scanned by applications that can specify resolution settings.					
	S: Scan PGS/Rez	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 315	These SPs count by resolution setting the total number of pages scanned by applications that can specify resolution settings. <b>Note</b> : At the present time, SP8-311 and SP8-315 perform identical counts					
8 31x 1	1200dpi <					
8 31x 2	600dpi to 1199dpi					
8 31x 3	400dpi to 599dpi					
8 31x 4	200dpi to 399dpi					
8 31x 5	< 199dpi					

- Copy resolution settings are fixed so they are not counted.
- The Fax application does not allow finely-adjusted resolution settings so no count is done for the Fax application.

8 381	T:Total PrtPGS	*CTL	These SPs count the number of pages printed
8 382	C:Total PrtPGS	*CTL	by the customer. The counter for the application used for storing the pages
8 383	F:Total PrtPGS	*CTL	increments.
8 384	P:Total PrtPGS	*CTL	[0 to 9999999/ <b>0</b> / 1] The L: counter counts the number of pages
8 385	S:Total PrtPGS	*CTL	stored from within the document server mode
8 386	L:Total PrtPGS	*CTL	screen at the operation panel. Pages stored with the Store File button from within the Copy
8 387	O:Total PrtPGS	*CTL	mode screen go to the C: counter.

- When the A3/DLT double count function is switched on with SP5104, 1 A3/DLT page is counted as 2.
- When several documents are merged for a print job, the number of pages stored are counted for the application that stored them.
- These counters are used primarily to calculate charges on use of the machine, so the following pages are not counted as printed pages:
  - Blank pages in a duplex printing job.
  - Blank pages inserted as document covers, chapter title sheets, and slip sheets.
  - Reports printed to confirm counts.
  - All reports done in the service mode (service summaries, engine maintenance reports, etc.)
  - Test prints for machine image adjustment.
  - Error notification reports.
  - Partially printed pages as the result of a copier jam.

	LSize PrtPGS *CTL [0 to 9999999/ 0 / 1]			
8 391	Note: In addition to bein	g display	on paper sizes A3/DLT and larger. ed in the SMC Report, these counters are display on the copy machine.	

8 401	T:PrtPGS/LS		These SPs count the number of pages printed
8 402	C:PrtPGS/LS	*CTL	from the document server. The counter for the

Service Tables

8 403	F:PrtPGS/LS	*CTL	application used to print the pages is
8 404	P:PrtPGS/LS	*CTL	incremented. The L: counter counts the number of jobs
8 405	S:PrtPGS/LS	*CTL	stored from within the document server mode
8 406	L:PrtPGS/LS	*CTL	screen at the operation panel. [0 to 9999999/ <b>0</b> / 1]

- Print jobs done with Web Image Monitor and Desk Top Binder are added to the L: count.
- Fax jobs done with Web Image Monitor and Desk Top Binder are added to the F: count.

8 411	Prints/Duplex	*CTL	This SP counts the amount of paper (front/back counted as 1 page) used for duplex printing. Last pages printed only on one side are not counted. [0 to 9999999/ <b>0</b> / 1]
-------	---------------	------	---

	T:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 421	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing. This is the total for all applications.					
	C:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 422	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing by the copier application.					
	F:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 423	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing by the fax application.					
	P:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ <b>0</b> / 1]			
8 424	These SPs count by binding and combine, and n-Up settings the number o pages processed for printing by the printer application.					
8 425	S:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ <b>0</b> / 1]			
	These SPs count by binding and combine, and n-Up settings the number of					

	pages processed for printing by the scanner application.			
	L:PrtPGS/Dup Comb		*CTL	[0 to 9999999/ <b>0</b> / 1]
8 426	6 These SPs count by binding and combine, and n-Up settings the r pages processed for printing from within the document server mo window at the operation panel.			
	O:PrtPGS/Dup Con	nb	*CTL	[0 to 9999999/ <b>0</b> / 1]
8 427	These SPs count by pages processed for		•	combine, and n-Up settings the number of Other applications
8 42x 1	Simplex> Duplex			
8 42x 2	Duplex> Duplex			
8 42x 3	Book> Duplex			
8 42x 4	Simplex Combine			
8 42x 5	Duplex Combine			
8 42x 6	2>	2 pages on 1 side (2-Up)		
8 42x 7	4>	4 pages on 1 side (4-Up)		
8 42x 8	6>	6 pa	ges on	1 side (6-Up)
8 42x 9	8>	8 pages on 1 side (8-Up)		
8 42x 10	9>	9 pages on 1 side (9-Up)		
8 42x 11	16>	16 pages on 1 side (16-Up)		
8 42x 12	Booklet			
8 42x 13	Magazine			

- These counts (SP8 421 to SP8 427) are especially useful for customers who need to improve their compliance with ISO standards for the reduction of paper consumption.
- Pages that are only partially printed with the n-Up functions are counted as 1 page.
- Here is a summary of how the counters work for Booklet and Magazine modes:

# 21-Apr-2006

Boo	oklet	Maga	azine
Original Pages	Count	Original Pages	Count
1	1	1	1
2	2	2	2
3	2	3	2
4	2	4	2
5	3	5	4
6	4	6	4
7	4	7	4
8	4	8	4

	T:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 431	These SPs count the total number of pages output with the three features below, regardless of which application was used.				
	C:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 432	These SPs count the total number of pages output with the three featur below with the copy application.				
	P:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 434	These SPs count the total number of pages output with the three features below with the print application.				
	L:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 436	These SPs count the total number of pages output from within the document server mode window at the operation panel with the three features below.				
8 437	O:PrtPGS/ImgEdt *CTL [0 to 9999999/ 0 / 1]				

	These SPs count the total number of pages output with the three features below with Other applications.		
8 43x 1	Cover/Slip Sheet	Total number of covers or slip sheets inserted. The count for a cover printed on both sides counts 2.	
8 43x 2	Series/Book	The number of pages printed in series (one side) or printed as a book with booklet right/left pagination.	
8 43x 3	User Stamp	The number of pages printed where stamps were applied, including page numbering and date stamping.

8 464	These SPs count by paper application.	These SPs count by paper type the number pages printed by the printer application.					
	L:PrtPGS/Ppr Type	*CTL	[0 to 9999999/ <b>0</b> / 1]				
8 466	These SPs count by paper type the number pages printed from within the document server mode window at the operation panel.						

21-Apr-2006

8 46x 1	Normal
8 46x 2	Recycled
8 46x 3	Special
8 46x 4	Thick
8 46x 5	Normal (Back)
8 46x 6	Thick (Back)
8 46x 7	OHP
8 46x 8	Other

8 471	PrtPGS/Mag	*CTL	[0 to 9999999/ <b>0</b> / 1]	
•	These SPs count by magnification rate the number of pages printed			
8 471 1	< 49%	< 49%		
8 471 2	50% to 99%			
8 471 3	100%			
8 471 4	101% to 200%			
8 471 5	201% <			

- Counts are done for magnification adjusted for pages, not only on the operation panel but performed remotely with an external network application capable of performing magnification adjustment as well.
- Magnification adjustments done with printer drivers with PC applications such as Excel are also counted.
- Magnification adjustments done for adjustments after they have been stored on the document server are not counted.
- Magnification adjustments performed automatically during Auto Reduce/Enlarge copying are counted.
- The magnification rates of blank cover sheets, slip sheets, etc. are automatically assigned a rate of 100%.

	T:S-to-Email PGS	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 651	These SPs count by color mode the total number of pages attached to an e-mail for both the Scan and document server applications.				
	S-to-Email PGS       *CTL       [0 to 99999999/ 0 / 1]         These SPs count by color mode the total number of pages attached to an e-mail for the Scan application only.				
8 655					
8 65x 1	B/W				
8 65x 2	Color				

🔸 Note

- The count for B/W and Color pages is done after the document is stored on the HDD.
   If the job is cancelled before it is stored, the pages are not counted.
- If Scan-to-Email is used to send a 10-page document to 5 addresses, the count is 10 (the pages are sent to the same SMTP server together).
- If Scan-to-PC is used to send a 10-page document to 5 folders, the count is 50 (the

document is sent to each destination of the SMB/FTP server).

 Due to restrictions on some devices, if Scan-to-Email is used to send a 10-page document to a large number of destinations, the count may be divided and counted separately. For example, if a 10-page document is sent to 200 addresses, the count is 10 for the first 100 destinations and the count is also 10 for the second 100 destinations, for a total of 20.).

	T:Deliv PGS/Svr	*CTL	[0 to 9999999/ <b>0</b> / 1]		
8 661	These SPs count by color mode the total number of pages sent to a Scar Router server by both Scan and LS applications.

21-Apr-2006

8 67x 2 Color

8 681	T:PCFAX TXPGS	*CTL	These SPs count the number of pages sent by PC
8 683	F:PCFAX TXPGS	*CTL	Fax. These SPs are provided for the Fax application only, so the counts for SP8 681 and SP8 683 are the same. [0 to 9999999/ <b>0</b> / 1]

- This counts pages sent from a PC using a PC fax application, from the PC through the copier to the destination.
- When sending the same message to more than one place using broadcasting, the pages are only counted once. (For example, a 10-page fax is sent to location A and location B. The counter goes up by 10, not 20.)

8 691	T:TX PGS/LS	*CTL	These SPs count the number of pages sent from
8 692	C:TX PGS/LS	*CTL	the document server. The counter for the application that was used to store the pages is
8 693	F:TX PGS/LS	*CTL	incremented.
8 694	P:TX PGS/LS	*CTL	[0 to 9999999/ <b>0</b> / 1] The L: counter counts the number of pages stored
8 695	S:TX PGS/LS	*CTL	from within the document server mode screen
8 696	L:TX PGS/LS	*CTL	the operation panel. Pages stored with the Store File button from within the Copy mode screen go to the C: counter.

🗸 Note

- Print jobs done with Web Image Monitor and Desk Top Binder are added to the count.
- If several documents are merged for sending, the number of pages stored are counted for the application that stored them.
- When several documents are sent by a Fax broadcast, the F: count is done for the number of pages sent to each destination.

8 701 TX PGS/Port *CTL [0 to 9999999/ 0 / 1]	]
--	---

	These SPs count the number of pages sent by the physical port used to send them. For example, if a 3-page original is sent to 4 destinations via ISDN G4, the count for ISDN (G3, G4) is 12.

🔸 Note

- Memory Clear (SP5-801)
- The following tables list the items that are cleared. The serial number information, meter charge setting and meter charge counters (SP8-581, 582, 583, 584, and 586) are not cleared.

5801	[Memory Clear]	
5801 1	All Clear	Resets all correction data for process control and all software counters, and returns all modes and adjustments to their default values.
5801 2	ENG All	Clears the engine settings.
5801 3	SCS	Initializes default system settings, SCS (System Control Service) settings, operation display coordinates, and ROM update information.
5801 4	IMH	No SP modes are cleared. But, all files stored in the

		HDD are cleared. (IMH: Image Memory Handler)		
5801 5	MCS	No SP modes are cleared. (MCS: Memory Control Service)		
5801 6	Copier application	Initializes all copier application settings.		
5801 7	Fax application	Initializes the fax reset time, job login ID, all TX/RX settings, local storage file numbers, and off-hook timer.		
5801 8	Printer application	<ul> <li>The following service settings:</li> <li>Bit switches</li> <li>Gamma settings (User &amp; Service)</li> <li>Toner Limit</li> <li>The following user settings:</li> <li>Tray Priority</li> <li>Menu Protect</li> <li>System Setting except for setting of Energy Saver</li> <li>I/F Setup (I/O Buffer and I/O Timeout)</li> <li>PCL Menu</li> </ul>		
5801 9	Scanner application	Initializes the scanner defaults for the scanner and all the scanner SP modes.		
5801 10	Netfile application	Deletes the network file application management files and thumbnails, and initializes the job login ID.		
5801 11	NCS	All setting of Network Setup (User Menu) (NCS: Network Control Service)		
5801 12	IPU	Clears the BICU settings		
5801 13	R-Fax	Initializes the job login ID, SmartDeviceMonitor for Admin, job history, and local storage file numbers.		
5801 14	Clear DCS Settings	Initializes the DCS (Delivery Control Service) settings.		

5801 15	Clear UCS Settings	Initializes the UCS (User Information Control Service) settings.
5801 16	MIRS Setting	Initializes the MIRS (Machine Information Report Service) settings.
5801 17	CCS	Initializes the CCS (Certification and Charge-control Service) settings.

5998	[Memory Clear]	
5998 1	ENG Setting	<ul> <li>All engine related SP modes except for the following:</li> <li>Serial number information</li> <li>SP modes related to meter charge</li> <li>Counters and logging data</li> </ul>
5998 2	ENG Counter	All counters and logging data related to engine

## Input Check Table

When entering the Input Check mode, 8 digits display the result for a section. Each digit corresponds to a different device as shown in the table.

Bit No.	7	6	5	4	3	2	1	0
Result	0 or 1							

Copier

5803	Bit	Description	Reading			
	Dit	Decemption	0	1

(A4 LEF)	(11" x 81/2" LEF)			
B5 LEF* <sup>4</sup> (10.5" x 7.25" LEF)	B5 LEF <sup>*4</sup> (10.5" x 7.25" LEF)	0	1	0
A5 LEF	A5 LEF	1	0	1

🔸 Note

- \*1: The machine detects either 11" x 17" SEF or A3 SEF, depending on the setting of SP 1-181-003.
- \*2: The machine detects either 8.5" x 14" SEF or B4 SEF, depending on the setting of SP 1-181-004.
- \*3: The machine detects either 11" x 81/2" LEF or A4 LEF, depending on the setting of SP 1-181-002.
- \*4: The machine detects either B5 LEF or 10.5" x 7.25" LEF, depending on the setting of SP 1-181-005.

Table 3: Paper Size (By-pass Table)

0: Pushed, 1: Not pushed

Mode	Models			No.	
North America	Europe/Asia	6	5	4	3
11" x 17" SEF* <sup>1</sup> (11" x 8.5" LEF)	A3 SEF* <sup>1</sup> (A4 LEF)	1	0	0	1
11" x 17" SEF* <sup>1</sup> (11" x 8.5" LEF)	A3 SEF* <sup>1</sup> (A4 LEF)	1	0	1	1
8.5" x 11" SEF* <sup>1</sup> (8.5" x 11" SEF* <sup>2</sup> )	A4 SEF* <sup>1</sup> (A5 LEF)	0	0	1	1
8.5" x 11" SEF* <sup>1</sup> (8.5" x 11" SEF* <sup>2</sup> )	A4 SEF* <sup>1</sup> (A5 LEF)	0	1	1	1
5.5" x 8.5" SEF	A5 LEF	1	1	1	1
5.5" x 8.5" SEF	A5 LEF	1	1	1	0

5.5" x 8.5" SEF	A5 LEF	1	1	0	0
5.5" x 8.5" SEF	A6 LEF	1	1	0	1

Vote Note

 \*1: When the machine determines that the paper feed direction is "LEF", it considers that the paper size is bracketed size.

#### Table 4: APS Original Size Detection

#### Test Pattern Printing

Printing Test pattern: SP2-109

Some of these test patterns are used for copy image adjustments but most are used primarily for design testing.

🕹 Note

- Do not operate the machine until the test pattern is printed out completely. Otherwise, an SC occurs.
- 1. Enter the SP mode and select **SP2-109-003**.
- 2. Enter the number for the test pattern that you want to print and press [#].
- 3. When you want to select the single color of Magenta, Yellow or Cyan for printing a test pattern, select the color with SP2-109-005 (2: Magenta, 3: Yellow, 4: Cyan).
- 4. When you want to change the density of printing a test pattern, select the density with

SP2-109-006 to -009 for each color.

🔸 Note

- If you select "0" with SP2-109-006 to -009, the color to be adjusted to "0" does not come up on a test pattern.
- 5. When you are prompted to confirm your selection, touch "Yes" to select the test pattern for printing.
- 6. Touch "Copy Window" to open the copy window, then select the settings for the test print (paper size etc.).

🔸 Note

- If you want to use black and white printing, touch "Black & White" on the LCD. If you want to use color printing, touch "Full Colour" on the LCD.
- 7. Press the "Start" key to start the test print.
- 8. After checking the test pattern, touch "SP Mode" on the LCD to return to the SP mode display.
- 9. Reset all settings to the default values.
- 10. Touch "Exit" twice to exit SP mode.

# Reboot/System Setting Reset

#### Software Reset

You can reboot the software with one of the following two procedures:

- 1. Turn the main power switch off and on.
- Press and hold down <sup>(☉)</sup> <sup>(⊕)</sup> together for over 10 seconds. When the machine beeps once, release both buttons. After "Now loading. Please wait" shows for a few seconds, the copy window will open. The machine is ready for normal operation.

System Settings And Copy Setting Reset

System Setting Reset

The system settings in the UP mode can be reset to their defaults. Use the following procedure.

- 1. Press User Tools/Counter 1.
- 2. Hold down 🖱 and then press System Settings.

🔸 Note

I	You	must	press	۲	first.

- 4. Press exit when the message tells you that the settings have been reset.

# Firmware Update

To update the firmware for this machine, you must have the new version of the firmware downloaded onto an SD (Secure Digital) Card. The SD Card is inserted into SD Card Slot 3 on the right side of the controller box.

Type of Firmware

There are 16 types of firmware as shown below.

Type of firmware	Function	Location of firmware	Message shown
Engine	Printer engine control	BICU Flash ROM	Engine
System/Copy Application	Operating system	Flash ROM on the controller board	System/Copy
Netfile Application	Feature application	Printer/scanner SD card	NetworkDocBox
Printer Application	Feature application	Printer/scanner SD card	SD Printer
Scanner Application	Feature application	Printer/scanner SD card	SD Scanner
Fax Application	Feature application	Flash ROM on the controller board	Fax
NIB	Network Interface	Printer/scanner SD card	Network
Operation Panel	Panel control	Operation Panel	OpePanel.
Fax FCU	Fax control	FCU	GWFCU 3-3
Language (16 languages)	Language firmware Two languages can be selected from 16 languages.	Operation Panel	LANG
WebDocBox	Document server	Printer/scanner	Web Uapl

	application	SD card	
WebSys	Web Service application	Printer/scanner SD card	Web Support
PS3	Page description language (PostScript3)	PS3 SD card	Option PS3
DESS	Security control	Printer/Scanner SD card	Security Module
ARDF	ARDF control	ARDF	ADF
Finisher (B793 only)	Finisher control	Finisher (B793 only)	Finisher

#### Before You Begin

An SD card is a precision device. Always observe the following precautions when you handle SD cards:

- Always switch the machine off before you insert an SD card. Never insert the SD card into the slot with the power on.
- Do not remove the SD card from the service slot after the power has been switched on.
- Never switch the machine off while the firmware is downloading from the SD card.
- Keep SD cards in a safe location where they are not exposed to high temperature, high humidity, or exposure to direct sunlight.
- Always handle SD cards with care. Do not bend or scratch them. Do not let the SD card get exposed to shock or vibration.
- Make sure that the write protection of an SD card is unlocked when you download an application to it. If not, downloading fails and a download error (e.g. Error Code 44) occurs during a firmware upgrade.

Keep the following points in mind when you use the firmware update software:

- "Upload" means to send data from the machine to the SD card. "Download" means to send data from the SD card to the machine.
- To select an item on the LCD, touch the appropriate button on the soft touch-screen of the LCD, or, press the appropriate number key on the 10-key pad of the operation panel. For example, when "Exit (0)" shows on the screen you can touch the Exit button on the screen, or, press the <sup>(1)</sup> button on the operation panel of the copier.

 Make sure that the machine is disconnected from the network to prevent a print job for arriving while the firmware update is in progress before you start the firmware update procedure.

#### **Updating Firmware**

#### Preparation

1. If the SD card is blank, copy the entire "romdata" folder onto the SD card.

If the card already contains the "romdata" folder, copy the "B230" folder onto the card.
 If the card already contains folders up to "B230", copy the necessary firmware files (e.g. B230xxxx.fwu) into this folder.

Vote Note

 Do not put multiple machine firmware programs on the same SD card. Copy the only model firmware you want.

- 1. Turn the main power switch off.
- 2. Remove the slot cover [A] ( $\mathscr{F} \times 1$ ).
- 3. Insert the SD card into SD Card Slot 3. Make sure the label on the SD card [B] faces the rear side of the machine.
- 4. Slowly push the SD card into the slot so it locks in place. You will hear it click. Make sure the SD card locks in place.

🔸 Note

- To remove the SD, push it in to unlock the spring lock. Then release it so it pops out of the slot.
- 5. Disconnect the network cable from the copier if the machine is connected to a network.

- 6. Switch the main power switch on. After about 45 seconds, the initial version update screen appears on the LCD in English.
- 7. On the screen, touch the button or press the corresponding number key on the operation panel to select the item in the menu that you want to update.

	ROM/NEW	What it means	
ROM:		Tells you the number of the module and name of the version currently installed. The first line is the module number, the second line the version name.	
	NEW:	Tells you the number of the module and name version on the SD card. The first line is the module number, the second line the version name.	

### 8. Touch "UpDate (#)" (or (\*) to start the update.

Vote Note

- The progress bar does not show for the operation panel firmware after you touch "OpPanel". The power on key flashes on and off at 0.5 s intervals when the LCDC firmware is updating. The power key flashes on and off at 3 s intervals when the update is finished.
- 9. The "Update is Done" message appears on the operation panel after completing the updating. The message differs depending on the firmware that has been updated.
- 10. Switch the copier main power switch off when you see the "Update is Done" message or follow the procedure that is displayed on the operation panel.
- 11. Press in the SD card to release it. Then remove it from the slot.
- 12. Switch the copier on for normal operation.

#### **Error Messages**

An error message shows in the first line if an error occurs during the download. The error code consists of the letter "E" and a number. The example above shows error "E24" displayed. For details, refer to the Error Message Table. ( "Handling Firmware Update Errors")

#### Firmware Update Error

If a firmware update error occurs, this means the update was cancelled during the update because the module selected for update was not on the SD card.

SDcard -> ROM	
Reboot after card insert. E82	]
BLC2 eplot Card No.:1/1	

#### **Recovery after Power Loss**

If the ROM update is interrupted as a result of accidental loss of power while the firmware is updating, then the correct operation of the machine cannot be guaranteed after the machine is switched on again. If the ROM update does not complete successfully for any reason, then in order to ensure the correct operation of the machine, the ROM update error will continue to show until the ROM is updated successfully.

In this case, insert the card again and switch on the machine to continue the firmware download automatically from the card without the menu display.

#### Updating the LCDC for the Operation Panel

Do the following procedure to update the LCDC (LCD Control Board).

- 1. Turn the copier main switch off.
- 2. Insert the SD card into SD Card Slot 3.
- 3. Switch the copier main switch on.
- 4. The initial screen opens in English after about 45 seconds.
- 5. Touch "Ope Panel.xx".
- 6. "xx" differs depending on the destination.
- 7. Touch "UpDate(#) or ( $^{\textcircled{m}}$ ) to start the update.
- 8. Downloading starts after about 9 seconds.
- 9. The operation panel goes off and the main power on key flashes in red at 0.5 s intervals when the data is downloading. The same key starts flashing in green at 1 s intervals when the update is finished.
- 10. Switch the copier main power switch off and remove the SD card. Then switch the copier on.

**Downloading Stamp Data** 

The stamp data should be downloaded from the controller firmware to the hard disks at the following times:

After the hard disks have been replaced.

The print data contains the controller software. Execute SP 5853 to download the fixed stamp data required by the hard disks.

- 1. Enter the SP mode.
- 2. Select SP5853 and then press "EXECUTE". The following screen opens while the stamp data is downloading.

	FEB	2,2005	2:06PM
SDcard -> ROM			
	7		
Loading			
Stamp Data	]		
\$\$\$\$\$k	]		
	_		

The download is finished when the message prompts you to close.

ted. You have to reboot. omatic reset in some cases
Exit

#### 3. Press the "Exit" button. Then turn the copier off and on again.

NVRAM Data Upload/Download

Uploading Content of NVRAM to an SD card

Do the following procedure to upload SP code settings from NVRAM to an SD card.

Vote Note

- This data should always be uploaded to an SD card before the NVRAM is replaced.
- Make sure that the write protection of an SD card is unlocked
- 1. Do SP5990-001 (SMC Print) before you switch the machine off. You will need a record of the NVRAM settings if the upload fails.
- 2. Switch the copier main power switch off.
- 3. Insert the SD card into SD card slot 3. Then switch the copier on.

- 4. Execute SP5824-001 (NVRAM Data Upload) and then press the "Execute" key
- 5. The following files are coped to an NVRAM folder on the SD card when the upload procedure is finished. The file is saved to the path and the following filename: NVRAM¥<serial number>.NV

Here is an example with Serial Number "K5000017114":

#### NVRAM¥K5000017114.NV

6. In order to prevent an error during the download, be sure to mark the SD card that holds the uploaded data with the number of the machine from which the data was uploaded.

Vote Note

You can upload NVRAM data from more than one machine to the same SD card.

#### Downloading an SD Card to NVRAM

Do the following procedure to download SP data from an SD card to the NVRAM in the machine.

- The NVRAM data down load may fail if the SD card with the NVRAM data is damaged, or if the connection between the controller and BICU is defective.
- Do the download procedure again if the download fails.
- Do the following procedure if the second attempt fails:
- Enter the NVRAM data manually using the SMC print you created before uploading the NVRAM data.
- 1. Switch the copier main power switch off.
- 2. Insert the SD card with the NVRAM data into SD Card Slot 3.
- 3. Switch the copier main power switch on.
- 4. Do SP5825-001 (NVRAM Data Download) and press the "Execute" key.

🔸 Note

 The serial number of the file on the SD card must match the serial number of the machine for the NVRAM data to download successfully. The download fails if the serial numbers do not match.

This procedure does not download the following data to the NVRAM:

- Total Count
- C/O, P/O Count

#### Address Book Upload/Download

#### Information List

The following information is possible to be uploaded and downloaded.

Information			
<ul> <li>Registration No.</li> </ul>	<ul> <li>Select Title</li> </ul>		
<ul> <li>User Code</li> </ul>	<ul> <li>Folder</li> </ul>		
<ul> <li>E-mail</li> </ul>	<ul> <li>Local Authentication</li> </ul>		
<ul> <li>Protection Code</li> </ul>	<ul> <li>Folder Authentication</li> </ul>		
<ul> <li>Fax Destination</li> </ul>	<ul> <li>Account ACL</li> </ul>		
<ul> <li>Fax Option</li> </ul>	<ul> <li>New Document Initial</li> </ul>		
<ul> <li>Group Name</li> </ul>	ACL		
<ul> <li>Key Display</li> </ul>	<ul> <li>LDAP Authentication</li> </ul>		

#### Download

- 1. Prepare a formatted SD card.
- 2. Make sure that the write-protection on the SD card is off.
- 3. Turn off the main power switch of the main machine.
- 4. Remove the slot cover 3 at the left rear side of the machine ( $\mathscr{F} \times 1$ ).
- 5. Install the SD card into the SD card slot 3 (for service use).
- 6. Turn on the main power switch.
- 7. Enter the SP mode.
- 8. Do SP5-846-051 (Backup All Addr Book).
- 9. Exit the SP mode, and then turn off the main power switch.
- 10. Remove the SD card form the SD card slot 3.
- 11. Install the slot cover 3.

🔸 Note

- If the capacity of SD card is not enough to store the local user information, an error message is displayed.
- Carefully handle the SD card, which contains user information. Do not take it back to your location.

#### Upload

- 1. Turn off the main power switch of the main machine.
- 2. Remove the slot cover 3 at the left rear side of the machine ( $\mathscr{F} \times 1$ ).

- 3. Install the SD card, which has already been uploaded, into the SD card slot 3.
- 4. Turn on the main power switch.
- 5. Enter the SP mode.
- 6. Do SP5-846-052 (Restore All Addr Book).
- 7. Exit the SP mode, and then turn off the main power switch.
- 8. Remove the SD card form the SD card slot 3.
- 9. Install the slot cover 3.

🔸 Note

- The counter in the user code information is initialized after uploading.
- The information of an administrator and supervisor cannot be downloaded nor uploaded.
- If there is no data of address book information in the SD card, an error message is displayed.

#### Installing Another Language

Many languages are available. But you can only switch between two languages at a time. Do the following procedure to select the two languages you want. You can select both of the languages you want from the user interface on the operation panel.

- 1. Switch the copier main power switch off.
- 2. Insert the SD card with the language data into SD Card Slot 3.
- 3. Switch the copier main power switch on. The initial screen opens after about 45 seconds.
- 4. Touch "Language Data (2)" on the screen (or press  $^{\textcircled{O}}$ ).

Download Lang	uage LCD	C ROM	B2315370	Lang. Card
LANG. 1(1)	Now Lang. Japanese English – UK	2.87 2.87	Select Lan	
			Exit(0)	

5. Touch "LANG. 1(1)" or "LANG. 2(2)"

Кеу	What it does
LANG. 1(1)	Touch this button on the screen (or press ① on the 10-key pad) to open the next screen so you can select the 1st language.
LANG. 1(2)	Touch this button on the screen (or press $^{\textcircled{2}}$ on the 10-key pad) to open the next screen so you can select the 2nd language.
Exit(0)	Touch this key on the screen (or press <sup>(®)</sup> on the 10-key pad) to quit the update procedure and return to normal screen.

6. Touch "LANG 1(1)" to select the 1st Language. Touch "LANG (2)" to select the 2nd Language.

SDcard -> ROM Page02						
<b>1</b> (7)	Italian	(1)				
	Spanish	(2)				
	Dutch	(3)				
	Norwegian	(4)				
	Danish	(6)				
- (-)						
<b>(9</b> )						
			-	5-11/0	-	
				Exit(0)		

 Touch the appropriate button on the screen (or press the number on the 10-keypad) to select a language as the 1st (or 2nd) language.

If a language is already selected, it will show in reverse.

Touching "Exit (0)" returns you to the previous screen.

If you do not see the language that you want to select, touch "↑(7)" or "↓(9)" on the screen (or press ⑦ or <sup>③</sup>) to show more choices.

The Download Screen opens after you select a language.

The 1st or 2nd language selected for updating shows.

- 1. The following show to right of the selection:
- 2. The first column shows the language currently selected

The 2nd column shows the language selected to replace that language.

The example below shows that the download will replace "Japanese" with "Italian" as the 1st language.

Download Langu	lage LCD	C ROM	B2315370	Lang. Card
	Now Lang.	2.87	Select La	
LANG. 1(1) LANG. 2(2)	Japanese English – UK		-> Italian ->	2.88
			Exit(0)	UpDate(#)

- 9. Touch "Update(#)" on the screen (or press (\*)) to start the download.
   Another screen with a progress bar does not show when the language is downloading.
   The following occur at the time the language is downloading:
  - The operation panel switches off.
  - The LED on the power on key flashes rapidly.
- 10. After the message of installation completed has shown on the LCD, switch the copier main power switch off. Then remove the SD card from the slot.
- 11. Switch the copier main power switch on to resume normal operation.

#### Handling Firmware Update Errors

An error message shows in the first line if an error occurs during a download. The error code consists of the letter "E" and a number ("E20", for example).

Code	Meaning	Solution
20	Cannot map logical address	Make sure the SD card is inserted correctly.
21	Cannot access memory	HDD connection incorrect or replace hard disks.
22	Cannot decompress compressed data	Incorrect ROM data on the SD card, or data is corrupted.
23	Error occurred when ROM update program started	Controller program abnormal. If the second attempt fails, replace controller board.
24	SD card access error	Make sure SD card inserted correctly, or use

Error Message Table

Service Tables

		another SD card.
30	No HDD available for stamp data download	HDD connection incorrect or replace hard disks.
31	Data incorrect for continuous download	Insert the SD card with the remaining data required for the download, the re-start the procedure.
32	Data incorrect after download interrupted	Execute the recovery procedure for the intended module download, then repeat the installation procedure.
33	Incorrect SD card version	Incorrect ROM data on the SD card, or data is corrupted.
34	Module mismatch - Correct module is not on the SD card)	SD update data is incorrect. Acquire the correct data (Japan, Overseas, OEM, etc.) then install again.
35	Module mismatch – Module on SD card is not for this machine	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.
36	Cannot write module – Cause other than E34, E35	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.
40	Engine module download failed	Replace the update data for the module on the SD card and try again, or replace the BICU board.
42	Operation panel module download failed	Replace the update data for the module on the SD card and try again, or replace the LCDC.
43	Stamp data module download failed	Replace the update data for the module on the SD card and try again, or replace the hard disks.
44	Controller module download failed	Replace the update data for the module on the SD card and tray again, or replace controller board.

50	Electronic confirmation check failed	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.
----	--------------------------------------	--

# SD Card Appli Move

#### Overview

The service program "SD Card Appli Move" (SP5-873) lets you to copy application programs from one SD card to another SD card.

Slot 1 and Slot 2 are used to store application programs. But there are 3 possible applications (PostScript 3, DOS unit, PictBridge). You cannot run application programs from Slot 3. However you can move application programs from Slot 3 to either Slot 1 or Slot 2 with the following procedure (Slot 1 has the priority in the SD card Appli Move procedure if both Slot 1 and Slot 2 are used):

- 1. Choose a SD card with enough space.
- 2. Enter SP5873 "SD Card Appli Move". Then move the application from the SD Card in Slot 3 to the Slot you want.

Vote

- Do steps 1-2 again if you want to move another application program.
- 3. Exit the SP mode

Use high caution when you do the SD Card Appli Move procedure:

- The data necessary for authentication is transferred with the application program from an SD card to another SD card. Authentication fails if you try to use the SD card after you copy the application program from one card to another card.
- 2. Do not use the SD card if it has been used by the user on the computer. Normal operation is not guaranteed when such an SD card is used.

- 3. Remove the cover [A] ( $\mathscr{F} \times 2$ ).
- 4. Keep the SD card in the place [B] after you copy the application program from one card to another card. This is done for the following reasons:
  - 1. The SD card can be the only proof that the user is licensed to use the application

program.

- 2. You may need to check the SD card and its data to solve a problem in the future.
- 5. You cannot copy PostScript data to another SD card. You have to copy other data to the same SD card that stores PostScript data.

#### Move Exec

The menu "Move Exec" (SP5-873-001) lets you copy application programs from the original SD card to another SD card.

★ Important

- Do not turn ON the write protect switch of the system SD card or application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.
- 1. Turn the main switch off.
- 2. Make sure that an SD card is in SD Card Slot 1. The application program is copied into this SD card.
- 3. Insert the SD card (having stored the application program) to SD Card Slot 3. The application program is copied from this SD card.
- 4. Turn the main switch on.
- 5. Start the SP mode.
- 6. Select SP5-873-001 "Move Exec."
- 7. Follow the messages shown on the operation panel.
- 8. Turn the main switch off.
- 9. Remove the SD card from SD Card Slot 3.
- 10. Turn the main switch on.
- 11. Check that the application programs run normally.

#### Undo Exec

The menu "Undo Exec" (SP5-873-002) lets you copy back application programs from an SD card to the original SD card. You can use this program when, for example, you have mistakenly copied some programs by using Move Exec (SP5-873-001).

★ Important

- Do not turn ON the write protect switch of the system SD card or application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.
- 1. Turn the main switch off.
- 2. Insert the original SD card in SD Card Slot 3. The application program is copied

back into this card.

- 3. Insert the SD card (having stored the application program) to SD Card Slot 1. The application program is copied back from this SD card.
- 4. Turn the main switch on.
- 5. Start the SP mode.
- 6. Select SP5-873-002 "Undo Exec."
- 7. Follow the messages shown on the operation panel.
- 8. Turn the main switch off.
- 9. Remove the SD card from SD Card Slot 3.

Vote Note

- This step assumes that the application programs in the SD card are used by the machine.
- 10. Turn the main switch on.
- 11. Check that the application programs run normally.

# **Controller Self-Diagnostics**

#### Overview

There are three types of self-diagnostics for the controller.

- 1. Power-on self-diagnostics: The machine automatically starts the self-diagnostics just after the power has been turned on.
- 2. Detailed self-diagnostics: The machine does the detailed self-diagnostics by using a loop-back connector (P/N G0219350)
- SC detection: The machine automatically detects SC conditions at power-on or during operation.

The following shows the workflow of the power-on and detailed self-diagnostics.

Power-on

#### **Detailed self-diagnostics**

In addition to the self-diagnostic test initiated every time the main machine is powered on, you can set the machine in a more detailed diagnostic mode manually. This lets you test other components or conditions that are not tested during self-diagnosis after power on. The following device is required in order to put the machine in the detailed self-diagnosis mode:

No.	Name
G0219350	Parallel Loopback Connector

#### **Executing Detailed Self-Diagnosis**

Do the following procedure to execute detailed self-diagnosis.

- 1. Switch off the machine, and connect the parallel loopback device to the Centronics I/F port.
- 2. Hold down <sup>®</sup>, press and hold down <sup>®</sup>. Then switch on the machine while pressing both keys at the same time.

You will see "Now Loading" on the touch-panel. Then you will see the results of the test. The machine automatically starts the self-diagnostics and prints the diagnostic report after completing the test.

 Refer to the diagnostics report for the detected errors. You can check the errors detected during self-diagnostics with SP7-832-001 (Diag. Result).

# Using the Debug Log

This machine provides a Save Debug Log feature that allows the Customer Engineer to save and retrieve error information for analysis.

Every time an error occurs, debug information is recorded in volatile memory. But this information is lost when the machine is switched off and on.

To capture this debug information, the Save Debug Log feature provides two main features:

- Switching on the debug feature so error information is saved directly to the HDD for later retrieval.
- Copying the error information from the HDD to an SD card.

Do the following procedure below to set up the machine so the error information is saved automatically to the HDD when a user has problems with the machine. Then ask the user to reproduce the problem.

Switching ON and Setting UP Save Debug Log

The debug information cannot be saved until the "Save Debug Log" function has been switched on and a target has been selected.

- 1. Enter the SP mode and switch the Save Debug Log feature on.
  - Press I then use the 10-key pad to enter OOC.
  - Press and hold down I for more than 3 seconds.
  - Touch "Copy SP".
  - On the LCD panel, open SP5857.
- 2. Under "5857 Save Debug Log", touch "1 On/Off".

3. On the control panel keypad, press "1". Then press (#). This switches the Save Debug Log feature on.

Vote Note

 The default setting is "0" (OFF). This feature must be switched on in order for the debug information to be saved.

COPY : SP-5-857-( Save Debug Log Target(2:HDD 3:SD)	002	
Initial	2	
	<b>↑</b> Prev Page	<b>↓</b> Next Page

4. Select the target destination where the debug information will be saved. Under "5857 Save Debug Log", touch "2 Target", enter "2" with the operation panel key to select the hard disk as the target destination. Then press (\*).

🔸 Note

- Select "3 SD Card" to save the debug information directly to the SD card if it is inserted in the service slot.
- 5. Now touch "5858" and specify the events that you want to record in the debug log. SP5858 (Debug Save When) provides the following items for selection.

1	Engine SC Error	Saves data when an engine-related SC code is generated.
2	Controller SC Error	Saves debug data when a controller-related SC Code is generated.
3	Any SC Error	Saves data only for the SC code that you specify by entering code number.
4	Jam	Saves data for jams.

#### 🔸 Note

• More than one event can be selected.

#### Example 1: To Select Items 1, 2, 4

Touch the appropriate items(s). Press "ON" for each selection. This example shows "Engine SC Error" selected.

COPY : SP-5-858-00 Debug Save When Engine SC Error(0:0FF		
OFF	ON	1/ 1
CANCEL	<b>↑</b> Prev Page	₩ Wext Page

#### Example 2: To Specify an SC Code

Touch "3 Any SC Error", enter the 3-digit SC code number with the control panel number keys. Then press ④. This example shows an entry for SC670.

COPY : SP-5-858-003	
Debug Save When	
Any SC Error	
670	
Initial ()	
<b>↑</b> Prev Page <b>↓</b> Ne	t Page

#### 🔸 Note

- For details about SC code numbers, please refer to the SC tables in Section 4.
   "Troubleshooting".
- 6. Select one or more memory modules for reading and recording debug information. Touch "5859".

Under "5859" press the necessary key item for the module that you want to record. Enter the appropriate 4-digit number. Then press ④.

🔸 Note

Refer to the two tables below for the 4-digit numbers to enter for each key.

The example below shows "Key 1" with "2222" entered.

COPY : SP-5-859-0 Debug Save Key No. Key 1	UT	
	2222	
Initial	U	<b>↓</b> Next Page

The following keys can be set with the corresponding numbers. (The initials in parentheses indicate the names of the modules.)

## 4-Digit Entries for Keys 1 to 10

Key No.	Сору	Printer	Scanner	Web
1	2222 (SCS)			
2	2223 (SRM)			
3	256 (IMH)			
4	1000 (ECS)			
5	1025 (MCS)			
6	4848 (COPY)	4400 (GPS)	5375 (Scan)	5682 (NFA)
7	2224 (BICU)	4500 (PDL)	5682 (NFA)	6600 (WebDB)
8		4600 (GPS-PM)	3000 (NCS)	3300 (PTS)
9		2000 (NCS)	2000 (NCS)	6666 (WebSys)
10		2224 (BICU)		2000 (NCS)

## 🔸 Note

• The default settings for Keys 1 to 10 are all zero ("0").

## Key to Acronyms

Acronym	Meaning	Acronym	Meaning
ECS	Engine Control Service	NFA	Net File Application
GPS	GW Print Service	PDL	Printer Design Language
GSP-PM	GW Print Service – Print Module	PTS	Print Server
ІМН	Image Memory Handler	SCS	System Control Service
MCS	Memory Control Service	SRM	System Resource Management
NCS	Network Control Service	WebDB	Web Document Box

21-Apr-2006

	(Document Server)
--	-------------------

The machine is now set to record the debugging information automatically on the HDD (the target selected with SP5857-002) for the events that you selected with SP5858 and the memory modules selected with SP5859.

Please keep the following important points in mind when you do this setting:

- Note that the number entries for Keys 1 to 5 are the same for the Copy, Printer, Scanner, and Web memory modules.
- The initial settings are all zero.
- These settings remain in effect until you change them. Be sure to check all the settings, especially the settings for Keys 6 to 10. To switch off a key setting, enter a zero for that key.
- You can select any number of keys from 1 to 10 (or all) by entering the corresponding 4-digit numbers from the table.
- You cannot mix settings for the groups (COPY, PRINTER, etc.) for 006 to 010. For example, if you want to create a PRINTER debug log you must select the settings from the 9 available selections for the "PRINTER" column only.
- One area of the disk is reserved to store the debug log. The size of this area is limited to 4 MB.

#### Retrieving the Debug Log from the HDD

Retrieve the debug log by copying it from the hard disk to an SD card.

- 1. Insert the SD card into the service slot of the copier.
- 2. Enter the SP mode and execute SP5857-009 (Copy HDD to SD Card (Latest 4 MB)) to write the debugging data to the SD card.
- 3. Use a card reader to copy the file and send it for analysis to your local Ricoh representative by email. You can also send the SD card by regular mail if you want.

#### Recording Errors Manually

SC errors and jams only are recorded to the debug log automatically. Please instruct the user to do the following immediately after occurrence to save the debug data for any other errors that occur while the customer engineer is not on site. Such problems also include a controller or panel freeze.

🔸 Note

• You must previously switch on the Save Debug Feature (SP5857-001) and select the hard disk as the save destination (SP5857-002) if you want to use this feature.

- 1. Press (Clear Modes).on the operation panel when the error occurs.
- 2. On the control panel, enter "01". Then hold down <sup>™</sup> for at least 3 seconds until the machine beeps and then release it. This saves the debug log to the hard disk for later retrieval with an SD card by the service representatives.
- 3. Switch the machine off and on to resume operation.

The debug information for the error is saved on the hard disk. This lets the service representative retrieve it on their next visit by copying it from the HDD to an SD card.

#### New Debug Log Codes

#### SP5857-015 Copy SD Card-to-SD Card: Any Desired Key

This SP copies the log on an SD card (the file that contains the information written directly from shared memory) to a log specified by key number. The copy operation is executed in the log directory of the SD card inserted in the same slot. (This function does not copy from one slot to another.) Each SD card can hold up to 4 MB of file data. Unique file names are created for the data during the copy operation to prevent overwriting files of the same name. This means that log data from more than one machine can be copied onto the same SC card. This command does not execute if there is no log on the HDD for the name of the specified key.

#### SP5857-016 Create a File on HDD to Store a Log

This SP creates a 32 MB file to store a log on the HDD. However, this is not a completely empty file. The created file will hold the number "2225" as the SCS key number and other non-volatile information. Even if this SP is not executed, a file is created on the HDD when the first log is stored on the HDD (it takes some time to complete this operation). This creates the possibility that the machine may be switched off and on before the log can be created completely. If you execute this SP to create the log file beforehand, this will greatly reduce the amount of time required to acquire the log information and save onto the HDD. With the file already created on the HDD for the log file, the data only needs to be recorded. A new log file does not need to be created. To create a new log file, do SP5857-011 to delete the debug log data from the HDD. Then do SP5857-016.

#### SP5857-017 Create a File on SD Card to Store a Log

This SP creates a 4 MB file to store a log on an SD card. However, this is not a completely empty file. The created file will hold the number "2225" as the SCS key number and other non-volatile information. Even if this SP is not executed, a file is created on the SD card when the first log is stored on the SD card (it takes some time to complete this operation). This

creates the possibility that the machine may be switched off and on before the log can be created completely. If you execute this SP to create the log file beforehand, this will greatly reduce the amount of time required to acquire the log information and save onto the SD card. With the file already created on the SD card for the log file, the data only needs to be recorded; a new log file does not require creation. To create a new log file, do SP5857-012 to delete the debug log data from the SD card. Then do SP5857-017.

10. Registration motor:	Drives the registration roller.
11. Paper transfer contact motor	Moves the paper transfer roller in contact with the image transfer belt.
12. ITB drive motor:	Drives the image transfer belt unit.
13. Fusing/paper exit motor:	Drives the fusing unit and paper exit section.

# **Board Structure**

### Overview

### 🔸 Note

In the diagram, 'MLB' is the File Format Converter

# Descriptions

# BICU (Base Engine Control Unit):

The BICU controls all the mechanical components. The BICU has six CPUs. The CPUs control the following functions:

- Engine sequence
- Engine operation
- Polygon motor control
- Image processing

# **Controller:**

The controller connects to the BICU through a PCI bus. The controller handles the following functions:

- Machine-to-host interface
- Operation panel interface
- Network interface
- Interfacing and control of the optional IEEE1284, Bluetooth, IEEE1394, IEEE802.11b (wireless LAN), USB Host, HDD, and DRAM DIMM

# LD Drive Board:

This is the laser diode drive circuit board.

# SBU:

The Sensor Board Unit has a CCD (charge-coupled device) and an analog-to-digital conversion circuit.

# **Operation Panel Board:**

This controls the display panel, the LED and the keypad.

# Scanner I/O Board (SIO):

The scanner I/O board is a circuit board that transmits control signals, image data, and electricity.

# I/O Board (IOB):

Contains drivers for motors and other mechanical components.

# Motherboard:

Connects the FCU board to the BICU. This board is supplied with the optional fax unit.

# FCU:

The FCU (fax controller unit) controls the fax programs and communicates with the controller to share copier resources.

### **Printing Process**

This machine uses four PCUs, and four laser beams for color printing. Each PCU consists of the drum unit and the development unit. Each drum unit has a drum, charge roller, cleaning brush, and blade. From the left, the PCU stations are yellow, cyan, magenta, and black. The drum [A] is charged with a negative voltage, and is exposed by the laser from the laser optics housing unit [B]. The laser neutralizes the negative charge on the surface of the drum. So, the white parts of the image correspond to areas of the drum that still have a high negative charge. The toner has a negative charge, and it moves to the areas of the drum that have the smallest negative charge (i.e., the areas written by the laser beam).

The image on each drum is moved to the transfer belt by the positive bias that is applied to the transfer belt [C]. All four toners are put on the belt at the same time. Then, the completed four-color image is moved to the paper by a negative charge applied to the ITB drive roller [D] (the transfer roller [E] is an idle roller).

- 1. Drum charge: The charge roller gives the drum a negative charge
- 2. **Laser exposure**: The laser beam from the laser diode (LD) goes through the lens and mirrors and reaches the drum. The machine turns the laser beam on and off to make a latent image on the drum.
- 3. **Development:** The development roller carries negatively charged toner to the latent image on the drum surface. This machine uses four independent development units (one for each color).
- 4. Transfer:

**Image transfer:** Bias rollers opposite the OPC drums transfer toner from the drums to the transfer belt. Four toner images are super-imposed onto the belt.

**Paper transfer**: Then, the ITB drive roller pushes the toner from the transfer belt to the paper (the transfer roller is an idle roller).

5. Cleaning for OPC drum: The cleaning brush and blade remove remaining toner on the

drum surface after image transfer to the paper.

- 6. **Quenching for OPC drum:** Quenching is done by illuminating the whole area of the drum with the laser at the end of every job.
- 7. **Cleaning and quenching for transfer belt:** The cleaning brush and blade clean the belt surface. The grounding roller inside the transfer belt unit removes the remaining charge on the belt.

- ID sensors: The ID sensors detect the density of ID sensor patterns on the transfer belt. The ID sensor board contains three ID sensors for the line position adjustment (front, center, and rear) and four ID sensors for the process control. On this board, there are 7 ID sensors in total, as follows.
  - [A]: Line position adjustment (front)
  - [B] Process control (K)
  - [C]: Process control (C)
  - [D]: Line position adjustment (centre)
  - [E] Process control (M)
  - [F]: Process control (Y)
  - [G]: Line position adjustment (rear)

The ID sensor output is used for the following:

- Process control and for automatic line position
- Skew correction
- Color registration adjustments for the latent image.

# **Process Control**

### Overview

This machine has the following two forms of process control:

- Potential control
- Toner supply control

The following machine components are used for process control:

- Four ID (image density) sensors (black, magenta, cyan and yellow).
- TD sensor.

Normally, process control is not disabled. If process control is disabled, fixed supply mode is used for toner supply, and the VREF stored in SP 3222 is used.

### **Potential Control**

### Overview

The machine determines VD using the ID sensor output, and then determines VB and  $V_L$ .

- V<sub>D</sub>: Drum potential without exposure to adjust this, the machine adjusts the charge roller voltage.
- V<sub>B</sub>: Development bias
- V<sub>L</sub>: Drum potential at the strongest exposure to adjust this, the machine adjusts the laser power

At the same time, the machine also determines VREF: Reference TD sensor output, used for toner supply control

If potential control is disabled (SP3-041-001 is set to "0"),  $V_D$  and  $V_B$  are fixed by the following SP mode settings.

SP2-005 for V<sub>D</sub>, SP2-229 for V<sub>B</sub>

If LD power control is disabled (SP3-041-002 is set to "0"), the LD power is fixed by the following SP mode setting.

SP2-221 for V<sub>L</sub>

# Process Control Self Check

This machine uses the process control self check method to do the potential control. The machine uses seven types of process control self check. These are categorized according to their execution timing.

The counter (SP3-510) is reset if a self-check is done (except for a forced self-check).  $\Delta T$  = Temperature change between the temperature of the previous process control and the current temperature

 $\Delta$ RH = RH (Relative Humidity) change between the relative humidity of the previous process control and the current relative humidity

 $\Delta AH = AH$  (Absolute Humidity) change between the absolute humidity of the previous process control and the current absolute humidity

- 1. Manual execution (forced): This is done when SP3-011-1 is used.
- 2. Initial

This starts automatically when the power is turned on, or, when the machine recovers from energy saver mode.

This is done automatically if one of these conditions occurs.

- a) ∆T is greater than or equal to Temperature Threshold (SP3-522-003: 10°C)
- b) ∆RH is greater than or equal to Relative Humidity Threshold (SP3-522-004: 50%RH)
- c) ∆AH is greater than or equal to Absolute Humidity Threshold (SP3-522-005: 6 g/m<sup>3</sup>)
- d) If the following conditions both occur.

BW Counter (SP3-510-003) is greater than or equal to Execution Interval (SP3-511-005) OR

FC Counter (SP3-510-004) is greater than or equal to Execution Interval (SP3-511-006) Non-use Time is greater than or equal to SP3522-002 (default: 6 hours)

3. Interval: Job End

This starts automatically at the end of a print job if the following condition occurs: BW Counter (SP3-510-001) is greater than or equal to Execution Interval (SP3-515-001) OR

FC Counter (SP3-510-002) is greater than or equal to Execution Interval (SP3-515-002)

4. Interval: During a Job

This interrupts printing and then starts automatically if the following condition occurs: BW Counter (SP3-510-001) is greater than or equal to Execution Interval (SP3-515-003) OR

FC Counter (SP3-510-002) is greater than or equal to Execution Interval (SP3-515-004) After process control is completed, the machine continues to make prints.

5. In standby mode

This is done automatically if one of these conditions occurs.

- a) △T is greater than or equal to Temperature Threshold (SP3-531-002: 10°C)
- b) ∆RH is greater than or equal to Relative Humidity Threshold (SP3-531-003: 50%RH)

- c) ∆AH is greater than or equal to Absolute Humidity Threshold (SP3-531-004: 6 g/m3)
- d) Non-use Time is greater than or equal to SP3-531-001 (default: 6 hours)
   It is not done if the machine is in energy saver mode.

The default non-use time is 6 hours (see condition 4 below), so normally it will only be done if the user disables energy saver mode.

6. After Toner End Recovery

This starts after recovery from a toner end condition.

7. After Developer Initialization

Developer initialization occurs automatically in the following conditions:

- After a new development unit has been installed
- After new developer is installed and 3902-005 to 008 is done, depending on the color (see 'Maintenance' for details).

# Step 1: VSG Adjustment

This machine uses four ID sensors (direct reflection type) for the process control. Each sensor detects a pattern for each color (see the 'Printing Process' section).

The ID sensor checks the bare transfer belt's reflectivity. Then the machine calibrates the ID sensor until its output when reading the bare transfer belt (known as VSG) is as follows.

VSG = 4.0 ± 0.5 Volts

### **Detailed Section Descriptions**

This calibration compensates for the transfer belt's condition and the ID sensor condition. For example, dirt on the surface of the belt or ID sensor.

VSG adjustment is always done during initial process control. But, at other times, it is only done if the VSG adjustment counter (SP3-510-007) is more than the value set with SP3-511-007 (default: 500) during a job or at job end.

SC400 is displayed if VSG is out of adjustment range sequentially 3 times.

SP3-321: Forced VSG Adjustment for each sensor

SP 3-325: Shows the results of the VSG adjustment (automatic or forced VSG adjustment) - 7 digits (Front, Bk, C, Center, M, Y, Rear)

# Step 2: ID Sensor Solid Pattern Generation

First, the machine agitates the developer for between 15 and 30 seconds until the fluctuation in TD sensor output becomes less than 0.3V.

Second, the machine makes the grade patterns (see the diagram). This 10-grade pattern is made in black, yellow, cyan, and magenta (40 squares in total).

 The machine first makes the first five grades for each color (the first 20 squares), and then the second five grades for each color (the remaining 20 squares).

The patterns are made by changing the development bias and charge roller voltage. The difference between development bias and charge roller voltage is always the same. But, the development potential changes for each pattern.

 The development potential is the difference between the development bias and the charge remaining on the drum where the laser writes a black area. The development bias changes for each grade, and the charge on black areas of the image is always the same, so the development potential also changes.

# Step 3: Sensor Pattern Detection

The ID sensor measures the light reflected from each grade of the pattern, to detect the densities of each grade. This data goes to memory.

# Step 4: Toner Amount Calculation

The machine calculates the amount of toner on the transfer belt that is required to make each of the 10 grades of the sensor pattern. To do this, the machine uses the output values of the ID sensor from each grade of the pattern.

The amounts of toner are expressed as M/A (mass per unit area, mg/cm<sup>2</sup>)

### Step 5: V<sub>D</sub>, V<sub>B</sub>, V<sub>L</sub> Selection and V<sub>TREF</sub> Adjustment

The machine determines the relationship between the amount of toner on the transfer belt and the development bias for each of the 10 grades.

From this, the machine determines the best  $V_D$  to get the target M/A for each color. Then, based on this  $V_D$ , the machine determines the best  $V_B$  and  $V_L$ . This process ensures that enough toner is deposited to make black pixels.

The machine also adjusts  $V_{TREF}$  (toner density target) at the same time so that the development gamma used by the machine fall within the target development gamma range stored in the machine's software. If it does not fall within this range, the amount of toner deposited on the latent image will be too high or too low.

### Toner Density Adjustment Mode

If the toner density becomes too high or too low because of an incorrect development gamma, this is corrected by process control (see the previous section). But sometimes, it takes many copies before the toner density comes to the correct value.

Toner density adjustment mode can be used to bring the toner concentration to the correct level much more quickly, if users complain about the toner density.

SP 3-043 controls when the toner density adjustment mode is done.

To do the toner density adjustment mode manually, execute SP 3-011-2.

It is also done automatically before ACC, if SP3-041-4 is set to "2: TC Control" (this is the default setting).

During this procedure, the machine generates ID sensor patterns and detects the current development gamma. The gamma must be within  $\pm$  0.2 of the target development gamma. If the current gamma is too high (above the target by 0.2 or more: 0.2 limit is set with SP3-239-009), the machine consumes toner in the development unit until the development gamma is within the correct range. To consume toner, the machine generates solid patterns. If the current gamma is too low (below the target by more than 0.2: 0.2 limit is set with SP3-239-012), the machine supplies toner to the development unit until the development gamma is within the correct range.

### Toner Supply Control

### Overview

Toner supply control determines how long the toner supply clutch turns on. This determines the amount of toner supplied. This is done before every development for each color.

750

Toner supply control uses the following factors:

- Density of the toner in the developer (detected by the TD sensor) V<sub>REF</sub>, V<sub>T</sub>
- Pixel count: Determines how much toner was used for the page

The image density is kept constant by adjusting the density of toner in the development unit. At the same time, it accommodates changes in the development conditions through the potential control mechanism. Environmental changes and the number of prints made are also used in the calculation.

The amount of toner supplied is determined by the 'on' time of the toner supply clutch. The total 'on' time for each toner supply clutch is stored in the memory chip for the relevant toner

=

cartridge The amount of toner supplied also depends on the process line speed for the current job. The machine supplies the calculated amount of toner for each color.

**Toner Supply Control Modes** 

This machine has three toner supply control modes. You can select them with SP3-044-1 to -4.

1. Fixed supply mode

This mode is used when the TD sensor becomes faulty. You can adjust the amount of toner supply with SP3-401-1 to -4 if the image density is incorrect (the default setting is 5%).

- PID (Proportional Integral Differential) control mode (Fixed V<sub>TREF</sub>)
   This mode is used when the ID sensor becomes faulty. Only the TD sensor is used to control toner supply. The machine uses the VTREF that is stored in SP3-222-1 to -4.
- PID (Proportional Integral Differential) control mode This is the default toner supply control mode. The TD sensor, ID sensor, and pixel count are used in this mode. V<sub>TREF</sub> is adjusted by process control.

### Toner Near End/Toner End Detection

### **Toner Near End**

The controller considers the following information to determine the toner near end status:

- Operation time counter of the toner attraction pump [A]
- Pixel counter

These values are both stored in the memory chip [B] on the toner cartridge, and copied from the memory chip to the NVRAM on the BICU.

If either value indicates that the amount of remaining toner is 50g or less, the machine enters the near-end condition.

# Toner End

To determine the toner end status, the machine uses the TD sensor [C] in the development unit. The machine must first be in a toner near-end condition, or toner end cannot be detected.

Toner end is detected if both the following conditions occurs:

- $V_T V_{TREF}$  greater than or equal to "0.5" (SP3-101-021)
- SUM (V<sub>T</sub> V<sub>TREF</sub>) greater than or equal to "10" (SP3-101-026)

The machine cannot print until the toner cartridge is replaced after it detects toner end for black. The machine can print in black and white only if cyan, magenta, or yellow are in a toner end condition during standby mode. At this time the machine cannot do color print jobs.

🗸 Note

 If the yellow, cyan, or magenta toner ends during a color-printing job, the job is suspended until toner is supplied. If new color toner is not installed, the user can print black-and-white jobs only.

### **Toner End Recovery**

The machine assumes that the toner cartridge has been replaced if either of the following occurs when the near-end or end status exists:

- The front door is opened and closed.
- The main switch is turned off and on.

Then the machine starts to supply toner to the development unit. After supplying toner, the machine clears the toner near-end or end status if the following condition is detected:

Toner end sensor detects that toner is supplied.

The machine tries to supply toner for a maximum of 5 times (SP 3-102).

### **Developer Initialization**

### When is it done?

When you install new developer, you must set the following SPs to "1" before you turn the power off. Then, the machine will reset the PM counters automatically. Developer initialization will also be done automatically.

- Black: SP3902-005
- Yellow: SP3902-006
- Cyan: SP3902-007
- Magenta: SP3902-008

When a new development unit or PCU is installed, the machine detects the new unit automatically and initializes the developer.

# How is it done?

The procedure is as follows.

- 1. The machine agitates the developer for 30 seconds.
- 2. The machine adjusts  $V_{CNT}$  (control voltage for TD sensor) so that  $V_T$  (TD sensor output) becomes within 2.7 ± 0.2.
- The machine keeps this as V<sub>TREF</sub> if it is successful. SC372 to SC375 is displayed if it fails sequentially 3 times.

The result of developer initialization can be checked with SP3-014.

# VCNT is corrected for the total number of prints. This does not let the developer Q/M vary.

During developer initialization, the machine forcibly supplies toner because there is no toner inside the toner transport tube at installation. Then the machine does the process control self check.

# Scanning

### Overview

<ol> <li>Scanner HP sensor</li> <li>ADF exposure glass</li> <li>2nd scanner (2nd carriage)</li> <li>Scanner lamp</li> <li>1st scanner (1st carriage)</li> </ol>	<ul> <li>6. Exposure glass</li> <li>7. Scanner motor</li> <li>8. Sensor board unit (SBU)</li> <li>9. Lens Block</li> <li>10. Original length sensor</li> <li>11. Original width sensor</li> </ul>
---	---

The original on the exposure glass or ARDF exposure glass reflects the light emitted from the scanner lamp. The reflected light goes to the CCD on the sensor board by way of the 1st and 2nd scanners. The sensor board converts the CCD analog signals into digital signals. When the original is manually placed on the exposure glass, the scanner motor pulls the 1st and 2nd scanners via mechanical linkage. The original is scanned from left to right. When the original is fed from the optional ARDF, it is automatically transported onto the ARDF exposure glass, and to the original exit. The original does not stay on the glass; but goes to the exit. The 1st and 2nd scanners stay at their home positions.

### Scanner Drive

The scanner motor [A] drives the 1st scanner [B] and the 2nd scanner [C] through the scanner drive pulley, scanner drive shaft [D], and two scanner wires [E].

#### Book mode -

The SBU board controls the scanner drive motor. The 2nd scanner speed is half that of the 1st scanner.

In reduction or enlargement mode, the scanning speed depends on the magnification ratio. The returning speed is always the same, whether in full size or magnification mode. The image length change in the sub scan direction is done by changing the scanner motor speed. In the main scan direction it is done by image processing on the BICU board.

You can adjust the magnification in the sub-scan direction by changing the scanner motor speed with SP4-008.

# ARDF mode -

The scanners always stay in their home position (the scanner HP sensor [F] detects the 1st scanner) to scan the original. The ARDF motor feeds the original through the ARDF. In reduction/enlargement mode, the image length change in the sub-scan direction is done by changing the ARDF motor speed. Magnification in the main scan direction is done in the BICU board. This is the same as for book mode.

You can adjust magnification in the sub-scan direction by changing the ARDF motor speed with SP6-017.

# **Original Size Detection**

- The original width sensors [A] detect the original width. The original length sensors [B] detect the original length.
- The SBU controller on the SBU board checks each sensor status when the platen cover sensor [C] is activated as it is closed. It detects the original size by the on/off signals it gets from each sensor.
- If the copy is made with the platen cover fully open, the SBU controller on the SBU determines the original size from the sensor outputs after the Start key is pressed.

Original Size		Length Sensor			Width Sensor		SP4-301 display
Metric version	Inch version	L3	L2	L1	W1	W2	
A3	11" x 17"	0	0	0	0	0	00011111
B4	10" x 14"	0	0	0	0	х	00011110

**Detailed Section Descriptions** 

21-Apr-2006

F4 8.5" x 13", 8.25" x 13", or 8" x 13" SP 5126 controls the size that is detected	8.5" x 14"	0	0	0	х	x	00011100
A4 LEF	8.5" x 11"	Х	Х	х	0	0	00000011
B5 LEF	-	Х	Х	х	0	х	00000010
A4 SEF	11" x 8.5"	Х	0	0	Х	х	00001100
B5 SEF	-	Х	Х	0	Х	х	00000100
A5 LEF/ SEF	5.5" x 8.5", 8.5" x 5.5"	х	х	х	х	х	00000000

🔸 Note

• O: Paper present, X: Paper not present

The above table shows the outputs of the sensors for each original size. This original size detection method eliminates the necessity for a pre-scan and increases the machine's productivity.

However, if the by-pass tray is used, the machine assumes that the copy paper is lengthwise (L). For example, if A4 sideways paper is placed on the by-pass tray, the machine assumes it is A3 paper and scans a full A3 area. Information from the original size sensors is disregarded.

Refer to the ARDF manual for more information on original size detection with the ARDF.

# Anti-Condensation Heater

The anti-condensation heater is available as an optional unit. The anti-condensation heater prevents condensation on the mirrors. Condensation can occur when the scanner unit is, for example, moved from a cold room to a warm room. Condensation can cause abnormal images.

# Image Processing

# Overview

# SBU (Sensor Board Unit)

# SBU

The VPU (Video Processor Unit) does the following functions:

- Black level correction
- White level correction
- Gradation calibration
- ADS control (Background Density)
- Creating the SBU test pattern

# **Operation Summary**

The signals from the 3-line CCD, one line for each color (R, G, B) and 2 analog signals per line (ODD, EVEN), are sampled by the ASIC and converted to digital signals in the 10-bit A/D converter. This is the first phase of processing the data scanned from the original.

# **Storing Operation Settings**

The controller stores the SBU settings. These values must be restored after the lens block is replaced:

SP4-008-001 Sub Scan Mag		Sub Scan Magnification Adjustment		
SP4-010-001 Sub Scan Reg Sub Scan Registrat		Sub Scan Registration Adjustment		
SP4-011-001 Main Scan Reg		Main Scan Registration Adjustment		

Also, before lens block replacement, enter the SP mode and note the settings of **SP4-800-001** to **-003** (ARDF density adjustments for R, G, B). After lens block replacement, do some copy samples with the ARDF, then check the copies. If the copies have background, change **SP4-800-001** to **-003** to their previous settings, or adjust until the background is acceptable. These SP codes are also used to adjust the ARDF scanning density, if the scanning densities of the ARDF and the platen mode are not the same.

### **SBU Test Mode**

There are two SP codes to create a test pattern which can be used as a diagnostic tool to troubleshoot problems in the SBU:

- SP4907 001 SBU Pattern Test Pattern
- SP4907 002 SBU Pattern Select Fixed Pattern

To print the pattern:

- Select the pattern to print.
- Touch "Copy Window" then press the Start key twice.

# IPU (Image Processing Unit)

The IPU does the following:

- Controls the scanner
- Processes the image signals from the SBU and sends them over the PCI bus to the controller memory
- Receives the image processing signals sent over the PCI bus from the controller memory, processes them, then outputs them to the VGAVD.
- Outputs the control signals for the ARDF
- Controls the relay of power and signals

Image processing, ADS correction, and line width correction are done on the BICU board for all the digital data sent from the SBU. Finally, the processed data is sent to the printer as digital signals (4 bits/pixel).

# Laser Exposure

### Overview

<ol> <li>Synchronizing detector board: Y/C-E</li> <li>LD unit-Y</li> <li>LD unit-C</li> <li>LD unit-Bk</li> <li>LD unit-M</li> <li>Synchronizing detector board: Bk/M-S</li> <li>F-theta lens-Bk/M</li> <li>WTL-Bk</li> </ol>	<ul> <li>9. WTL-M</li> <li>10. Synchronizing detector board: Bk/M-E</li> <li>11. Polygon mirror motor</li> <li>12. Synchronizing detector board: Y/C-S</li> <li>13. WTL-C</li> <li>14 WTL-Y</li> <li>15. F-theta lens-Y/C</li> </ul>
---	--

This machine uses four LD units and one polygon mirror motor to produce latent images on four OPC drums (one drum for each color toner).

There are two hexagonal mirrors. Each mirror reflects beams from two LD units.

Laser exposure for black and magenta starts from the rear side of the drum. But for yellow and cyan it starts from the front side of the drum. This is because the units for black and magenta are on the other side of the polygon mirror from the units for yellow and cyan.

# **Optical Path**

The laser beams for black [A] and yellow [B] are directed to the upper part of the polygon mirror [C]. Laser beams for magenta [E] and black [D] are directed to the lower part of the polygon mirror. The LD mirrors (see the previous page) deflect the laser beams for magenta and black towards the lower polygon mirror.

The WTL [F] corrects the main scan line. Without this component, the line bends out towards the middle of the main scan. The central bend of the WTL is adjusted in the factory. The speed of the polygon mirror depends on the selected mode and model (see below).

Mode	Polygon motor speed (rpm)	Process line speed (mm/s)	Print speed (ppm)
Plain /Middle Thick	32,598	138 mm/s	C1a: 25 C1b: 30
OHP/Thick	36,378	77 mm/s	16

### Laser Synchronizing Detectors

### Overview

The machine has four laser synchronizing detector boards (LSD). There is one at each corner of the laser optics-housing unit.

The four LSD boards detect the following:

- [A]: Scanning end position for yellow and cyan
- [B]: Scanning start position for yellow and cyan
- [C]: Scanning end position for magenta and black
- [D]: Scanning start position for magenta and black.

The machine recognizes each color from the time that they are detected.

### Main Scan Start Detection

For magenta and black, the LSD at the rear detects the start of the main scan. For yellow and cyan, the LSD at the front detects the start of the main scan. The arrow [E] indicates the scanning direction.

# **Clock Frequency Adjustment**

Each LSD ensures that the number of laser clock pulses in the main scan is constant. If the count for one particular beam varies from normal, the LD clock frequency for that beam is adjusted.

If the board at the end position is defective, the clock frequency cannot be adjusted. At this time, you must disable the detection feature with SP2-186-1.

# LD Safety Switch

A relay on the PSU ensures technician and user safety. It also prevents the laser beam from turning on during servicing. This relay turns off when the front cover, upper left cover, or right door is opened. At this time it cuts the power (+5V) supplied to the LD board for each color through the BICU.

Two safety switches are used to turn the relay off. One switch is used for the front door. Another safety switch is used for the right door.

- PMAC: Precise Pulse Modulation ASIC on C-MOS technology
- LDB: LD Drive Board (included in the LD Unit)

# **Error Messages**

Along with other switches, the LD safety switches help show error messages related to external covers. When one or more covers are open, the messages, "Cover is open." and "Close the indicated cover," show with a diagram. The diagram shows which cover is open.

# Automatic Line Position Adjustment

#### Overview

CC, KK, YY, MM: Spaces between two lines of the same color

KC, KY, KM: Spaces between a black line and a color line

During automatic line position adjustment, the line patterns above are created eight times on the transfer belt. The spaces between the lines (CC, KK, YY, MM, KC, KY, KM) are measured by the front, center, and rear ID sensors. The controller takes the average of the spaces. Then it adjusts the following positions and magnification:

- Sub scan line position for CMY
- Main scan line position for CMY
- Magnification ratio for CKMY
- Skew for CMY

The transfer belt-cleaning unit cleans the transfer belt after the patterns are measured. SC285 shows if an error is detected four times consecutively.

# Summary of Each Adjustment

### Sub scan line position for YCM

The adjustment of the sub-scan line position for YCM is based on the line position for K (color registration). The machine measures the gaps between the lines of each color in the pattern on the transfer belt. If the gaps for a color are not correct, the machine moves the image of

the color up or down the sub scan axis. To do this, it changes the laser write timing for that color.

# Main scan line position for YCM

If the machine detects that the image is out of position in the main scan direction, it changes the laser write start timing for each scan line.

# Magnification adjustment for KYCM

If the machine detects that magnification adjustment is necessary, it changes the LD clock frequency for the required color.

# Skew for YCM

The adjustment of the skew for YCM is based on the line position for K.

# Adjustment Conditions

Line position adjustment can be turned on or off with SP2-193-001. However, it is normally recommended to turn on this function.

Line position adjustment timing depends on several SP mode settings. These are described below.

 $\Delta t$  = Time since the previous line position adjustment

 $\Delta T$  = Temperature change between the temperature of the previous line position adjustment and the current temperature

# Forced (SP2-111-001 to -003):

This activates the line position adjustment manually. There are three types of line position adjustment mode. See the SP table for details.

# Initial:

This starts automatically when the power is turned on, or when the machine recovers from the energy saver mode.

Line position adjustment is automatically done twice if one of these conditions occurs:

- 1.  $\Delta t$  > Time threshold (SP2-193-012: [default: 600 minutes])
- 2.  $\Delta T$  > Temperature threshold (SP2-193-011: [default: 10°C])

Line position adjustment is automatically done **once** if one of these conditions occurs:

- 1.  $\Delta t$  > Time threshold (SP2-193-009: [default: 300 minutes])
- 2.  $\Delta T$  > Temperature threshold (SP2-193-008: [default: 5°C])

# Interval: During job:

This interrupts printing and then starts automatically if one of these conditions occurs when the machine checks at the sheet interval specified with SP3-512-001 (default: 30 page). Line position adjustment is automatically done **once** if one of these conditions occurs:

1.  $\Delta t$  > Time threshold (SP2-193-009: [default: 300 minutes])

- 2.  $\Delta T$  > Temperature threshold (SP2-193-008: [default: 5°C])
- B/W counter (SP3-510-005) + Color counter (SP3-510-006) > Output threshold for all outputs (SP2-193-004: [default: 200 pages)
- 4. Color counter > Output threshold for color outputs (SP2-193-005: [default: 200 pages])

### Interval: Job end:

This starts automatically at the end of a print job.

Line position adjustment is automatically done **once** if one of these conditions occurs:

- 1. ∆t > Time threshold (SP2-193-009: [default: 300 minutes])
- 2.  $\Delta T$  > Temperature threshold (SP2-193-008: [default: 5°C])
- B/W counter (SP3-510-005) + Color counter (SP3-510-006) > Output threshold for all outputs (SP2-193-002: [default: 500 pages)
- 4. Color counter > Output threshold for color outputs (SP2-193-003: [default: 200 pages])

### Front door open/close:

This starts automatically when the front door is opened/closed.

Line position adjustment is automatically done once if one of these conditions occurs:

- 1.  $\Delta t$  > Time threshold (SP2-193-009: [default: 300 minutes])
- 2.  $\Delta T$  > Temperature threshold (SP2-193-008: [default: 5°C])

### In stand-by mode:

This is automatically done **once** if both conditions occur at the same time. However, it is not done if the machine is in the energy saver mode.

- ∆t > Time threshold (SP2-193-009: [default: 300 minutes]) or ∆T > Temperature threshold (SP2-193-008: [default: 5°C])
- B/W counter (SP3-510-005) > Output threshold for B/W outputs (SP2-193-002: [default: 500 pages]) or Color counter > Output threshold for color outputs (SP2-193-003: [default: 200 pages])

# After new PCU or Image Transfer Belt Unit detection

When the machine detects a new unit (one of the PCUs or the Image Transfer Belt Unit), line position adjustment is automatically done **twice**.

### If the main scan magnification changes

This is detected by the main scan synchronization detectors at each end of the scan line for each color.

If the magnification changes by more than 1% (threshold adjustable SP2-193-010), line position adjustment is done again.

### Main Scan Skew Adjustment

The WTL positioning motors for magenta [A], cyan [B], and yellow [C] adjust the angle of the WTL [D] respectively, based on the WTL position for black. This mechanism corrects main scan skew.

**ID Sensors** 

There are seven ID sensors. Three of them are for the line position adjustment. Four of them are for process control. The ID sensor shutter [A] covers the sensors when the machine is idle.

When the ID sensor shutter solenoid [B] is activated, ID sensor shutter [A] slides to the left. This mechanism prevents the ID sensors from becoming dirty with toner or dust.

### Shutter Mechanism

The laser optics housing unit has a shutter. As a result, toner and other dust do not fall on the glass of the laser optics housing. The shutter motor [A] moves the shutter [B] in the direction of the arrow with the cam [C] (to open: black arrow direction, to close: white arrow direction). First, the actuator [D] stays at the shutter closed sensor [E]. The shutter motor opens the shutter and the actuator moves to the shutter open sensor position [F] after the polygon motor has turned on.

Finally, the shutter motor closes the shutter and the actuator moves back to the shutter closed sensor position [E] after the polygon motor has turned off.

One of SC290 to 297 occurs if the output of the shutter open [F] or closed sensor [E] does not change after the shutter motor turned on.

# PCU (Photo Conductor Unit)

### Overview

This machine has four tandem PCUs. Therefore, four color developments are possible during one paper path. This improves the productivity of outputs in color printing mode. Each PCU contains identical components (drum unit, development unit and so on), but the PCUs are not interchangeable.

The diameter of the drum is 40 mm (circumference: about 125.7 mm).

The photoconductor gap between a drum and the corresponding development roller is not possible to adjust because these are assembled as a PCU at the factory.

The ID chip is part of the TD sensor assembly. The ID chip contains counters and other data about the PCU, drum unit, and development unit. If you replace the development unit with a new one, the counter information for the drum unit is not kept on the new ID chip.

# Around the Drum

# Drum Drive

The drum/development drive motor-K [A] drives the drum unit for black. The drum drive motor-CMY [B] drives the drum units for magenta, cyan, and yellow. Using one motor to drive these three drums reduces CMY color misalignment. Both motors are brush-less DC motors. This helps to reduce the drive noise.

### Phase Control Mechanism

The machine uses the drum gear position sensors to detect if the drum motors rotate. SC380 shows when it detects that the drum motor is not moving. These sensors also help the machine to initialize the relative positions of the gears when the main switch is turned on, and during initializing. This prevents phase fluctuation between printouts that is caused by incorrect gear meshing at the start of the job.

There is an interrupter on each of the black [C] and magenta [D] drum gears. The drum gear position sensors [E][F] detect the positions of these interrupters. This mechanism makes sure that output quality does not vary. The cyan and yellow drum gears operate with the magenta drum gear because these three drum gears are linked through other gears. In the ready status, if the gears are not in the correct position, the machine adjusts the position of the black drum gear.

The relative positions of the gears are adjusted every 30 jobs.

### Drum Charge and Quenching

This machine uses a non-contact charge roller [A] to reduce ozone. The non-contact charge roller gives the drum surface a negative charge. The high voltage supply board – C.B, which is located at the rear of the machine, applies a dc and ac voltage (at a constant current) to the roller. The ac voltage helps to ensure that the charge given to the drum is as uniform as possible.

The machine automatically controls the charge roller voltage if automatic process control is enabled (i.e., if SP3-041-1 is set to "CONTROL"). However, if process control is switched off, (i.e., if SP3-041-1 is set to "FIXED"), the dc voltage is the value stored in SP2-001-1 to -12 (do not adjust in the field unless advised to do so).

The diameter of the charge roller is 12.5 mm (circumference about 39.3 mm). The gap between a drum and the corresponding charge roller is about 50  $\mu$ m.

The cleaning roller [B], which always contacts the charge roller, cleans the charge roller. Quenching is done by illuminating the whole area of the drum with the laser at the end of every job.

### Drum Cleaning

The cleaning blade [A] scrapes off the used toner that stays on the drum. The toner collection auger [B] transports the used toner towards the toner collection duct. Then it goes to the toner collection duct. The brush roller [C] put lubricant on the drum to make toner removal easy the next time the drum rotates past the cleaning blade.

If the temperature is above the value of SP 3517, the drum reverses briefly at the end of the job to prevent the blade from flipping over.

The brush roller rubs against the lubricant bar [D] and lubricates the drum surface. Lubricant is uniformly applied on the surface of the drum by the lubricant application blade [E].

The toner collection auger [B] in each PCU is driven by gears [F] at the end of the drum. This toner then goes to the toner collection bottle (see section "Toner Collection Path and Drive" in this section).

### Development

### **Development Operation**

This machine uses a dual-component development system and has four development units (which are included in the drum units), one for each color. Each contains 225 g of developer when it is new. The developer in each unit is supplied to the development roller [A] by the two mixing augers [B] and attracted onto the surface of its roller.

The TD sensor [C] in the development unit and four ID sensors above the ITB control toner density. Each development unit has a TD sensor. The TD sensor contains an ID chip in which some information about the development unit is stored.

The diameter of the development roller is 18 mm (circumference about 56.5 mm).

#### Drive

The drum/development drive motor-K [A] drives the development roller for black through gears and a clutch. The gear trains are shown in the diagram.

The development drive motor-CMY [B] drives the development unit for magenta, cyan, and yellow through gears.

**Developer Agitation** 

Two mixing augers [A] circulate the developer forward and backward to agitate the developer. This happens at the following times:

- During process control self check
- During toner supply

During development.

Filters [B] on the top of the developer hopper make sure that the internal pressure does not become too high. These ducts are sealed not to let the toner solidify before installing. This development unit does not operate very well if it has been placed in the condition of over 50°C during transportation. The toner inside the development unit can become solid at temperatures higher that this value. A developer initialization error shows if the toner does become solid. At this time, you must do the following procedure:

🔸 Note

- You should also do this procedure when you install a new development unit.
- 1. Remove the (old) development unit.
- 2. Keep the (new) development unit level and shake it several times from side to side.
- 3. Install it in the machine.

# **Development Bias**

The PSU supplies development bias to the development roller via the receptacle at the rear of each development unit.

There is a dc bias voltage.

The machine automatically controls the dc bias if the automatic process control is enabled (i.e., if SP3-041-001 is set to "1: ON"). However, if process control is switched off, (i.e., if SP3-041-001 is set to "0: OFF"), the dc bias is the value stored in SP3-621-001 to -012 (do not adjust in the field unless advised to do so).

# New Unit Detection

The TD sensor [A] in the development unit has an ID chip that contains the new unit detection flag. The machine detects that a PCU is new if the flag in the ID chip is activated. The machine automatically does the following adjustments when detecting the new unit detection flag.

- PM counter clear for items related to the PCU
- Developer initialization
- Charge roller voltage control
- Process control
- Line position adjustment

If the PM counter clear fails, clear the following SPs manually.

- SP3-902-1 to -4
- SP3-902-5 to -8
- SP3-902-9 to -12

# **Toner Supply**

Overview

- 1. Toner bottle (each color)
- 2. Memory chip (each color)
- 3. Toner end sensor (each color)
- 4. Toner attraction pump (each color)
- 5. Development unit (each color)
- 6. TD sensor (each color)

This machine uses four toner bottles. Each bottle has a spiral groove in it and its groove moves toner to the toner attraction pump. And the toner attraction pump transports the toner to the development unit.

The toner end sensor is attached to the toner supply tube. The toner end sensor and the output from the process control define when the machine detects toner end.

#### **Toner Supply Mechanism**

Toner supply from toner bottle to toner attraction pump

The toner transport motor [A] rotates the toner bottle-Bk via gears and a clutch. It also rotates the toner bottle-Y, -C, -M via gears, clutches and timing belts.

Each bottle has a spiral groove, and this groove moves toner to the mouth [B] of the bottle. Here, toner spills into a hopper [C]. The opening [D] of the toner hopper is normally closed if the toner bottle is not installed in the machine. When the toner bottle is installed in the machine, the transport tube [E] pushes the toner hopper shutter [F] and then the opening of the toner hopper is open.

The toner passes part of the way along the transport tube towards the toner attraction pump. The toner goes through the toner end sensor [G].

### Toner Near End Detection

The toner end sensors [G] detect toner near end conditions ( "Toner Near End/Toner End Detection" in this section).

Toner supply from toner attraction pump to development unit

Each toner attraction pump [A] is driven by the toner transport motor [B]. Each toner attraction pump has the same mechanism. The pump (toner attraction pump) has the following components:

- Toner supply clutch [C]
- Rubber tube
- Rotor [D]

The above components attract the toner in the toner transport tube [E] toward the development unit.

The toner supply clutch controls the rotor, which draws the toner in from the cartridge and passes it to the development unit. When supplying toner, the clutch turns on and off as many times as necessary to supply the necessary amount of toner. The amount of toner depends on the results of toner supply control.

# Shutter Mechanism

The development unit and toner attraction pump each have a shutter mechanism. The shutter [F] on the pump opens when the development unit is placed in the machine. At the same time, the pump opens the shutter [G] in the development unit. When both shutters are open, toner can enter the development unit from the toner attraction pump.

The shutter springs pull and close the shutter when the development unit is removed.

# Toner Cartridge

RFID (Radio Frequency ID)

Each toner cartridge of this machine has a RFID chip [A]. This stores the total "on" time of the toner supply clutch. This is used to calculate the amount of toner remaining in the toner cartridge. The chip is also used to detect whether the cartridge is installed (if the cartridge is not installed, the machine does not detect a signal from the memory chip). The RFID transmits its data to the RFID antenna board [B] without any contact.

# Waste Toner Collection

Toner Collection Path and Drive

From PCU

The used toner from the collection augers in the four PCUs drops into the toner collection duct from the four openings [A][B][C][D] at the front of the PCUs. The toner collection auger [E] in the duct transports this used toner towards the toner collection bottle [F]. The coil [E] is driven by the toner transport motor [G]. The openings and PCUs correspond as follows: Yellow  $\Rightarrow$  [A], Cyan  $\Rightarrow$  [B], Magenta  $\Rightarrow$  [C], Black  $\Rightarrow$  [D].

#### From Image Transfer Belt Unit

The toner collection auger [A] moves the used toner from the image transfer belt and the used toner drops into the toner collection duct [B]. The toner collection coil [C] moves the used toner to the opening [D] at the rear of the toner collection bottle. The toner transport motor [E] drives the toner collection coil.

Used Toner Distribution Mechanism

The toner collection bottle has two openings (front and rear). The opening at the front is for the toner from the PCUs, and the opening at the rear is for the toner from the image transfer belt.

To distribute the toner inside the bottle evenly, the auger [A] moves the toner to the center area. The mixing auger has two spirals in different directions. As a result, it is possible to gather the toner in the center area of the toner collection bottle even if the mixing auger always rotates in the same direction. The toner transport motor [B] drives the mixing auger via a timing belt and gears.

## Toner Collection Bottle Set/ Near-Full/ Full Detection

The toner collection bottle has a projection at its rear side. When the toner collection bottle is set, this projection pushes the waste toner bottle set switch at the rear of the machine. As a result, the machine detects that the toner collection bottle is installed.

The bottle near-full/full detection mechanism is above the bottle. When the used toner pushes up the used toner feeler [A], the waste toner sensor [B] turns off

At this time, the machine detects that the toner collection bottle is almost full, and displays a message.

After this, when 500 sheets of paper have been copied, the machine detects that the toner collection bottle is full, and the machine stops.

# Image Transfer and Paper Separation

# Image Transfer

#### Overview

1. Image transfer belt (ITB)	6. Lubricant application roller	
2. ID sensor	7. Toner collection auger	
3. ITB drive roller	8. Cleaning blade	
4. Paper transfer roller	9. Cleaning roller	
5. Rotation encoder	10. Image transfer roller	

The toner is moved from the four drums to the ITB by the four image transfer rollers. This is done with one rotation of the ITB (four toner images are super-imposed onto the belt). The arrow above the C and M drums on the diagram shows the direction of ITB rotation.

The ITB drive roller then moves the four-color toner image from the transfer belt to the paper. The paper transfer roller is an idle roller.

The cleaning unit in the transfer unit cleans the belt surface with the cleaning blade and roller. The used toner collected from the belt is transported to the toner collection bottle.

There are seven ID sensors. Three of them are for the line position adjustment. Four of them are for process control.

## ITB (Image Transfer Belt) Drive

#### **Drive Motor**

The ITB drive motor [A] drives the image transfer belt [B] and the cleaning unit via gears and the ITB drive roller [C]. The speed of ITB drive depends on the process line speed (see 'Laser Exposure – Optical Path').

# Transfer belt speed control

This machine uses the rotation encoder to control the transfer belt speed.

The encoder [A] is on one of the rollers. This encoder checks the rotation speed of the image transfer belt. The controller analyzes the signals from the encoder. Then it adjusts the rotation speed of the image transfer belt.

The encoder contains a disk that has 300 notches on its surface [B]. These notches are read by the sensor [C]. The controller counts the number of notches that the sensor has read in the unit of time. If the sensor has read an unusually large number of notches or an unusually small number of notches, the controller ignores such unusual signals. Therefore, incorrect reading does not affect the rotation speed.

#### Filter H:

The number of notches read by the sensor when the rotation speed of the transfer belt is at its highest possible value.

Filter L:

The number of notches read by the sensor when the rotation speed of the transfer belt is at its lowest possible value.

#### **ITB** Current

Each image transfer roller [A] applies current to the image transfer belt to attract the toner from each drum [B]. The high voltage supply board supplies current to the image transfer rollers and grounds the belt at roller [C].

The bias that is applied to the image transfer belt is automatically corrected for paper size, temperature (measured by the temperature/humidity sensor at the rear lower right side of the machine).

The other rollers are grounded to neutralize the belt surface.

#### Transfer belt cleaning

The ITB-cleaning unit removes toner (during printing) and the ID sensor patterns (during process control or automatic line position adjustment) on the belt. Belt cleaning is completed while the image transfer belt makes one rotation. The ITB drive motor drives the ITB-cleaning unit.

The cleaning brush [A] always contacts the image transfer belt [B], and removes used toner from the belt. The cleaning blade [C] in the cleaning unit scrapes the toner off the image transfer belt. Then the toner collection auger [F] transports the toner towards the toner collection duct.

The lubricant application roller [D] applies lubricant [E] to the image transfer belt to make toner removal easy.

To drive the cleaning unit, the transfer belt rotates gear [G], and gears at the front of the transfer unit drive the auger [F] and the rollers [A, D] in the cleaning unit.

#### ITB (Image Transfer Belt) Contact

#### Mechanism

The ITB contact and release mechanism increases the lifetime of the image transfer belt and drums.

The drum for black always contacts the belt. But the image transfer belt moves away from the other drums during monochrome printing.

In the standby mode, the image transfer belt contacts only the black drum. It moves away from the black drum when you turn the release lever counterclockwise.

When the machine prints a color page, the machine waits until the previous page has gone through the paper transfer unit. Then the ITB contact motor [A] turns on and a cam [B] moves the left side [C] of the image transfer belt downward, so that it contacts the other three drums. The machine does not release the image transfer belt from the color drums during the job, even if a monochrome page comes again. This is because the total printing speed reduces if the ITB changes position.

But, if you change SP 2907 003 away from the default setting of zero, the image transfer belt will move away from the color drums if the number of consecutive black-and-white prints reaches the value of SP 2907 003.

The belt moves away from the color drums if the job is interrupted by any error except a power failure.

The image transfer belt contact sensor [D] detects if the image transfer belt contacts the color PCUs.

🔸 Note

 If a power failure occurs when the image transfer belt is in contact with the drums, the belt stays in this position. If you want to remove the image transfer belt unit while the power is still off, you must release the belt. To do this, swing out the controller box. Then turn the drive gear [B] manually.

# Transfer Belt Sensor

The ITB contact sensor [D] operates as the detection sensor during machine initialization, and also as the position sensor during machine operations.

Before machine initialization, the left side of the image transfer belt is in the home position. When initialization starts, the ITB contact motor lowers the left side until the actuator has passed the sensor. Then ITB contact motor lifts up the left side to its home position. This action actuates the sensor in a certain pattern.

The table lists the sensor actuation patterns.

Machine status		Sensor pattern
Initialization		On → Off → On → Off → On
	Standby (Default)	On
Operation	B/W printing	On
	Color Printing	Off

On: The actuator is out of the sensor.

Off: The actuator is interrupting the sensor.

# Paper Transfer and Separation

#### Overview

The paper transfer unit consists of the paper transfer roller and discharge plate. This unit completes the toner transfer to the paper.

PTR (Paper Transfer Roller) Drive

• P.P.: Power Pack

The toner is moved from the OPC [A] onto the surface of the image transfer belt [B] by a positive charge from the image transfer roller (immediately above the drum, not shown here). The ITB drive roller [C], which is given a negative charge, pushes the toner to the paper [D]. The paper transfer roller [E] presses the paper against the image transfer belt [B] (with a spring that is under tension from the paper transfer roller contact motor), and grounds the charge from the ITB drive roller [C]. (The paper transfer roller does not have a drive mechanism. This roller is driven by the image transfer belt.)

Finally, the discharge plate [E], which is given an AC charge, discharges the paper.

The discharge plate receives its charge from a different high voltage power supply board than the ITB drive roller.

PTR (Paper Transfer Roller) Contact and Separation

The paper transfer contact motor [A] keeps the paper transfer roller [B] in contact with the image transfer belt [C]. This motor has the paper transfer HP sensor [D] inside. The paper transfer HP sensor detects if the paper transfer roller is in contact with the image transfer belt. Only when the machine executes the line position adjustment or process control, the paper transfer unit keeps away from the image transfer belt.

# Paper Feed

# Overview

<ol> <li>Pick-up roller - tray 1</li> <li>Separation roller - tray 1</li> <li>Feed roller - tray 1</li> <li>Registration roller</li> <li>Transport roller - By-pass feed</li> <li>Feed roller - By-pass feed</li> <li>By-pass feed table</li> </ol>	<ul> <li>8. Friction pad - By-pass feed</li> <li>9. Vertical transport roller 1</li> <li>10. Vertical transport roller 2</li> <li>11. Feed roller - tray 2</li> <li>12. Separation roller - tray 2</li> <li>13. Paper tray 2</li> <li>14. Pick-up roller - tray 2</li> <li>15. Paper tray 1</li> </ul>
---	--

There are two paper trays (500 sheets each), and a by-pass feed table (100 sheets). The paper feed mechanism uses an FRR system for tray 1 and 2, and uses a friction pad system for the by-pass tray.

Tray 1 can hold A4 or letter paper only. Tray 2 can hold a range of sizes.

# Drive - Tray 1, Tray 2, and By-Pass Tray

The paper feed motor [A] drives the pick-up and feed mechanisms in tray 1 [B], tray 2 [C]. It uses clutches and complex trains of gears to do this.

When tray 1 and tray 2 are inside the machine, their pick-up rollers [E][F] are always in contact with each top sheet of the paper stack (see section ). However, the feed roller [G] of the by-pass tray [D] stays away until the by-pass pick-up solenoid [H] turns on (see section ). When the paper feed clutch [I] for tray 1 turns on, the pick-up, feed [J] and separation [K] rollers start rotating to feed the paper. The paper from tray 2 is also fed in the same way. For the paper from the by-pass tray [D], the duplex/by-pass motor drives the feed roller to feed the paper.

The paper feed clutch stays on until shortly after the registration sensor activates.

#### Paper Lift – Trays 1 & 2

When the tray is installed in the machine, the tray bar [A] pushes the lever [B], and this lever pushes down the pick-up roller [C] onto the paper.

Also, the rear end of the paper tray pushes the tray set switch; see section (for tray 2, this is the paper size switch). As a result, the machine detects that the paper tray is installed.

When the machine detects that a tray has been placed in the machine, the tray lift motor [D] rotates and the coupling gear [E] on the tray lift motor engages the pin [F] on the lift arm shaft [G]. Then the tray lift arm lifts the tray bottom plate [H] until the paper lift sensor [I] for the tray detects that the top of the stack is at the paper feed position.

When the tray is removed from the machine, the connection between the coupling gear and lift arm shaft is disengaged, and the tray bottom plate lowers.

Paper Size Detection - Trays 1 & 2

There is no size switch for tray 1. The paper size is fixed at either A4 or LT (LEF for both sizes). You can change the size setting with SP5-181-1.

For tray 2, there are four paper size switches [A] working in combination. Switch 1 (right end) is for tray set detection. The other three switches detect the paper size as shown in the table below. The actuator [B] is moved by the end plate [C].

0: Not pushed, 1: Pushed

Mod	Switch Location				
North America	North America Europe/Asia		SW3	SW2	
DLT (A3) SEF*1	A3 (DLT) SEF*1	1	1	0	
LG (B4) SEF*2	B4 (LG) SEF*2	1	1	1	
A4 SEF	A4 SEF	0	0	1	
B5 SEF	B5 SEF	0	0	0	
LT (A4) LEF*3	A4 (LT) LEF*3	0	1	1	
B5 (Exe) LEF*4	B5 (Exe) LEF*4	1	0	1	
A5 LEF	A5 LEF	0	1	0	
↓ Note					

 \*1: The machine detects either DLT SEF or A3 SEF, depending on the setting of SP5-181-3.

- \*2: The machine detects either LG SEF or B4 SEF, depending on the setting of SP5-181-4.
- \*3: The machine detects either LT LEF or A4 LEF, depending on the setting of SP5-181-2.
- \*4: The machine detects either Exe LEF or B5 LEF, depending on the setting of SP5-181-5
- SP 5-181-6 to –13 does similar functions for the optional paper trays.

The machine disables paper feed from a tray if the paper size cannot be detected (if the paper size actuator is broken or no tray is installed).

For non-standard paper sizes, if they are not visible on the user tool screen for selecting paper sizes, then set SP 5112 to 1. If the user selects one of these sizes, auto paper size selection is disabled.

# Paper Height Detection – Trays 1 & 2

Two paper height sensors [A] [B] and actuator [C] are built into the paper tray lift motor. The paper height sensors, detect the amount of paper in the tray.

The actuator [C] has two semicircles, and it is engaged with the lift arm shaft via gears. The paper height sensors detect the paper size depending on the position of the two semicircles. The list shown below shows the detection combination of the two sensors.

The paper remaining status bar is displayed in the tray selection icon on the LCD.

Remaining paper	Paper height sensor 1 [A]	Paper height sensor 2 [B]	
100% (Status bar x 4)	OFF	OFF	
70% (Status bar x 3)	ON	OFF	
30% (Status bar x 2)	ON	ON	
10% (Status bar x 1)	OFF	ON	

OFF: No actuator

Paper End Detection – Trays 1 & 2

The paper stack raises the paper end feeler [A] and the paper end sensor [B] deactivates if there is some paper in the paper tray.

When the paper tray runs out of paper, the paper end feeler [A] drops into the cutout in the tray bottom plate. At this time the paper end sensor [B] activates.

# Registration

The registration motor [A] drives the registration roller [B] with a complex train of gears. The machine makes a paper buckle at the registration roller to correct paper skew. You can adjust the paper buckle with SP1-003.

### Paper Feed Line Speed

This machine has two process line speeds (for feed from registration roller to fusing unit). The line speeds depend on the selected mode.

Mode	Line speed (mm/s)	Print speed (ppm)
Plain/ Middle Thick	138	C1a: 25 C1b: 30
OHP/Thick	77	16

**Detailed Section Descriptions** 

Tray Lock Mechanism

This machine has two types of tray lock mechanism.

Tray Lock at the Front

The lock at the front prevents the tray from coming out of the machine during transporting or shipping. When you pull the handle [A], the lock lever [B] is lowered. As a result, you can pull out the tray.

Tray Lock at the Rear

This mechanism is only activated when the machine detects a paper jam. The lock at the rear prevents the tray from coming out from the machine when the paper is jammed. If the tray is removed while the paper is jammed, the paper may be split in two pieces. This makes it difficult to remove the jammed paper.

If the paper is jammed, the tray lock solenoid [A] turns on and activates the lock lever [B]. The lock lever [B] locks tray 1 [C] and tray 2 [D].

# Paper Dust Collection

The two mylars [A] scrape the paper dust from the registration idle roller [B]. The paper dust falls down into the paper dust container [C].

## **By-pass Paper Separation**

When the paper set sensor detects paper and the machine gets a by-pass printing job, the by-pass solenoid [A] unlocks the feed shaft stopper at the front end of the by-pass feed shaft [B].

The by-pass feed shaft has the by-pass feed roller [C] and two cams [D]. These cams move the paper lift plate [E] up and down. This pushes the paper against the feed roller.

To feed the paper, the by pass feed roller makes one turn. After this, the rollers inside the machine can feed the paper, and the solenoid locks the shaft again.

The by-pass tray has the separation pad system. The by-pass feed roller and separation pad [F] feed the top sheet of paper stack.

#### By-pass Paper Size Detection

There are two paper side plates [A] on the by-pass tray. These connect with the paper size sensor [B] through a rack-and-pinion mechanism.

# Fusing

#### Overview

1. Thermopile	8. Pressure roller thermostat
2. Tension roller	9. Pressure roller thermistor
3. Fusing roller	10. Fusing belt
4. Pressure roller	11. Heating roller
5. Lubricant roller	12. Heating roller fusing lamps
6. Cleaning roller	13. Heating roller thermostats
7. Pressure roller fusing lamp	14. Heating roller thermistor

- A belt fusing system is used. This has a faster warm-up time than a conventional fusing and pressure roller system.
- The heating roller is made of aluminum to increase the temperature of the fusing belt quickly.
- The fusing roller is made of sponge, which flattens slightly, also increasing the fusing nip.
   This roller does not contain a fusing lamp.
- The heating roller has two fusing lamps (one lamp heats the center and the other lamp heats the ends), and the pressure roller has one fusing lamp.
- The heating roller thermistor, pressure roller thermistor and thermopile control the temperature of these lamps. The thermopile is a non-contact sensor. The thermopile detects the temperature at the center of the fusing unit, and the thermistor detects the temperature at the end.

- Temperature is normally controlled by turning the fusing lamps on and off.
- The lubricant roller supplies a small amount of oil to the pressure roller through the cleaning roller. An oil supply unit is not necessary because the amount of oil supplied to the pressure roller is small.

#### **Fusing Unit Drive**

#### Belt and Rollers

The fusing/paper exit motor drives the pressure roller [A] and the fusing roller [B] through the gear train, timing belt and clutch. The heating roller [C] is driven by the pressure with the fusing belt [D]. The cleaning roller [E] and lubricant roller [F] are driven by the friction with the pressure roller.

#### Fusing Clutch

The fusing clutch [G] turns off and cuts the drive power when the fusing unit does not operate. This mechanism prevents wear on the belt and rollers.

Vote Note

• The fusing clutch turns off when images and patterns are created on the transfer belt during process control and line position adjustment.

### Lubricant Mechanism

The lubricant roller [F] contains silicone oil in its material. The lubricant roller applies small amount of silicone oil to the pressure roller to reduce the friction between the pressure roller and thermistor.

The cleaning roller [E] cleans the lubricant roller to remove the residual toner stuck to the lubricant roller.

# Pressure Release Mechanism

The pressure levers [A] put the proper pressure to the nip between the pressure roller [B] and fusing belt [C]. When releasing these levers, the pressure roller moves away from the fusing belt. If a paper jam occurs in the fusing unit, releasing these levers make jammed paper easily removed.

# **Fusing Temperature Control**

#### Components

- [A]: Thermostat
- [B]: Thermopile
- [C]: Thermostat
- [D]: Thermistor (non-contact)
- [E]: Thermistor (contact)
- [F]: Thermostat
- [G]: Pressure roller fusing lamp
- [H]: Heating roller fusing lamps

# **Fusing Temperatures**

When the main switch turns on, the CPU turns on the fusing lamp. The lamp stays on until the thermistor detects the standby temperature. Then the CPU raises the temperature to the printing temperature.

Mode	Temperature of Heating Roller (°C)	Temperature of Pressure Roller (°C)
Machine ready	170 (SP1105-001)	50 (SP1105-007)
Paper feed ready	Machine ready - 10	

The fusing temperature for each mode is as follows. These are set by SP 1105.

21-Apr-2006

Mode	Temperature of Heating Roller (°C)	Temperature of Pressure Roller (°C)
	(SP1105-085)	
Print ready	Machine ready - 10 (SP1105-002)	-
Standby mode	165 (SP1105-010, -011)	150 (SP1105-012)
Energy saver (panel off) mode	140 (SP1105-013, -014)	150 (SP1105-015)
Low power mode	40 (SP1105-016, -017)	100 (SP1105-018)
Off mode	Lamps off (SP1105-019, -020)	Lamps off (SP1105-021)
Plain paper	160 (SP1105-030 to -036)	
Thin paper	155 (SP1105-038 to -044)	
Middle thick paper	170 (SP1105-109 to -112)	
Thick 1 paper (one-sided)	165 (SP1105-046, -050)	
Thick 1 paper (duplex, side 2)	170 (SP1105-048, -052)	
Thick 2 paper	175 (SP1105-054, -055)	
Thick 3 paper (full color)	180 (SP1105-089)	
Thick 3 paper (black-and-white)	170 (SP1105-090)	
OHP (full color)	175 (SP1105-056)	
OHP (black-and-white)	165 (SP1105-057)	
Special paper	165 (SP1105-058 to -080)	

## - Paper Weights -

- Thin paper: Below 60 g/m<sup>2</sup> (16 lb)
- Normal plain paper: 60 81 g/m<sup>2</sup> (16 22 lb.)
- Middle Thick: 82 105 g/m<sup>2</sup> (22 28 lb.)
- Thick 1: 106 169 g/m<sup>2</sup> (28.5 44.9 lb.)
- Thick 2: 170 219 g/m<sup>2</sup> (45 58 lb.)
- Thick 3: 220 253 g/m<sup>2</sup> (58.5 67 lb.)

#### Temperature Corrections

#### - Corrections for ambient temperature (SP 1112) -

- If the room temperature is below 17°C, the heating roller temperature is increased by 5°C.
- If the room temperature is above 30°C, the heating roller temperature is decreased by 5°C.
- First print of a job (SP 1114) -
- The heating roller temperature is increased by 10°C for the first 2 seconds of the job.
- Corrections during the job (SP 1116) -
- The fusing temperature can be reduced two times during the job. There are adjustments for the temperature at the center and at the ends. There are also adjustments for paper wider than 226 mm, and less than 226 mm.
- With the default settings, fusing temperature at the center for paper widths less then 226 mm is reduced by 5°C after 30 seconds, and again reduced by 5°C after 60 seconds.

#### **Overheat Protection**

The CPU cuts power to the fusing lamp at the following times:

 The heating roller or pressure roller temperature becomes higher than 230°C for one second or more

SC 543 and SC 553 for the heating roller or SC 563 for the pressure roller show for this condition.

The heating roller or pressure roller temperature reaches 250°C.
 SC 544 and SC 554 for the heating roller or SC 564 for the pressure roller show for this condition.

The following components are used if thermistor or thermopile overheat protection fails.

- Two thermostats for the heating roller and two thermofuses for the pressure roller in series with the common ground line of the fusing lamp.
  - If one of the thermostat temperatures becomes higher than 234°C, it opens and cuts

power to the fusing lamp.

If the other thermostat temperature becomes higher than 235°C, it also opens and cuts power to the fusing lamp.

 If either of the two thermofuse temperatures becomes higher than 154°C, the thermofuse opens and cuts power to the fusing lamp.

🕹 Note

These thermofuses make a series circuit.

In either case, the machine stops operation.

#### **Energy Saver Modes**

Overview

When the machine is not being used, the energy saver function reduces power consumption by decreasing the fusing temperature.

This machine has the following two types of energy saver modes:

- 1. Panel-off mode
- 2. Auto Off mode

These modes are controlled by the following UP and SP modes:

- Panel off timer: User Tools System Settings Timer Setting Panel Off Timer
- Auto off timer: User Tools System Settings Timer Setting Auto Off Timer

Panel Off Mode

# Entering the panel off mode

The machine enters the panel off mode when one of the following is done:

- The panel off timer runs out.
- The Clear Mode/Energy Saver Key is held down for one second.

If the value in the panel off timer is larger than that in the auto off timer, the machine goes into the auto off mode. At this time it does not go into the panel off mode. To make the panel off mode effective, specify a value smaller than the values in the auto off timer.

# What happens in panel off mode

When the machine is in the panel off mode, each of the fusing lamps are kept at the temperatures indicated in the table at the bottom of the page. The operation panel indicators are turned off except for the Energy Saver LED and the Power LED.

If the controller receives an image print out command from an application program (e.g. to print incoming fax data or to print data from a PC), the temperature of each fusing lamp rises to print the data.

# Return to stand-by mode

The machine returns to stand-by mode if one of the following is done:

- The Clear Mode/Energy Saver Mode key is pressed
- Any key on the operation panel or touch panel screen is pressed
- An original is placed in the ADF
- The ADF is lifted
- A sheet of paper is placed in the by-pass feed table

The return time from the panel off mode is less than 30 seconds.

Mode	Operation Switch	Energy Saver Fusing Temperature LED		+24V	System +5V
Panel off	On	On	Heating roller: 100°C Pressure roller: 130°C	On	On

# Auto Off Mode

There are two Auto Off modes: Off Stand-by mode and Off mode. The difference between Off Stand-by mode and Off mode is the machine's condition when it enters the Auto Off mode.

#### Entering off stand-by and off modes

The machine enters the Off Stand-by mode or Off Mode when one of the following is done.

- The auto off timer runs out.
- The operation switch is pressed to turn the power off.

If one or more of the following conditions exists, the machine enters Off Stand-by mode. If none of these conditions exist, the machine enters the Off Mode.

- Error or SC condition
- Image data is stored in the memory
- During memory TX or polling RX
- The handset is off hook
- An original is in the ARDF
- The ARDF is open

### Off Stand-by mode

The system +5V is still supplied to all components. When the machine detects a ringing signal or receives a stream of data for a print job, the +24V supply is activated. At this time the machine automatically prints the incoming message or executes the print job.

#### Off Mode

The system +5V supply also turns off. However, +5VE (+5V for energy saver mode) is still activated. When the machine detects a ringing signal, off-hook signal, or receives a print job, the machine returns to the Off Stand-by mode and the system +5V and +24V supplies are activated.

#### Returning to stand-by mode

The machine returns to stand-by mode when the operation switch is pressed. The return time is less than 45 seconds.

Mode	Operation Switch	Energy Saver LED	Fusing Lamp	+24V	System +5V	Note
Off Stand-by	Off	Off	Off (On when printing)	On	On	
Off	Off	Off	Off	Off	Off	+5VE is supplied

#### New Unit Detection

Fusing Unit, Image Transfer Belt Unit

The fusing unit and image transfer belt unit each have a fuse. When the machine detects that

the fuse is intact, the machine determines that a new unit is installed. Then a short time later, the fuse blows.

# PCU, Development Unit

The development unit (as part of the PCU, or as a separate development unit) contains an ID chip. The ID chip contains information that tells the machine that the unit is new.

# Paper Exit

## Overview

<ol> <li>Junction gate</li> <li>Paper exit roller 1</li> </ol>	5. Paper exit roller 2
<ol> <li>Paper overflow sensor</li> <li>Paper exit sensor</li> </ol>	<ul><li>6. To the inverter tray</li><li>7. To the standard tray</li></ul>

After fusing, the junction gate feeds paper to the standard paper tray or the inverter tray. The junction gate solenoid controls the junction gate as follows:

- To the standard paper tray: The junction gate solenoid is off (default)
- To the inverter tray: The junction gate solenoid is on.

The fusing/paper exit motor drives the paper exit rollers.

#### Junction Gate Mechanism

To the Standard Tray

The paper exit rollers [A] feed paper to the standard tray. These rollers are driven by the fusing/paper exit motor [B].

When a sheet of paper stays in the paper exit unit, the paper exit sensor [C] detects the paper jam and "xxxxx" is displayed.

When outputs push up the tray full actuator [D], the paper overflow sensor [E] detects that standard trays is full of outputs and "xxxx" is displayed after a job end.

When paper is fed to the inverter tray, the junction gate [A] closes the paper path to the standard tray. And then, the inverter roller [B] feeds paper to the inverter tray. This roller is driven by the duplex inverter motor [C].

To the Inverter Tray

### **Duplex Unit**

### Overview

- 1. Duplex inverter roller
- 2. Junction gate
- 3. Duplex entrance sensor
- 4. Duplex transport roller 1
- 5. Duplex transport roller 2

- 6. Duplex exit sensor
- 7. Duplex transport roller 3
- 8. Standard tray
- 9. Inverter tray
- To print on the second side, the duplex inverter roller inverts the paper from the fusing unit and feeds it to the duplex unit.
- The duplex unit feeds the inverted paper back to the paper feed section.
- When both sides have been printed, the duplex inverter unit feeds the paper out to the standard tray.

### **Duplex Drive**

The duplex inverter motor [A] drives the following:

Duplex inverter roller [B]

The duplex/bypass motor [C] drives the following:

- Duplex transport roller 1 [D]
- Duplex transport roller 1 [E]
- Duplex transport roller 1 [F]

The duplex entrance sensor [G] and duplex exit sensor [H] control the interleave movement and detect paper jams.

### Inverter Mechanism

This machine uses the above switch back system for duplex printing. The drawing above right shows the paper feed for duplex printing.

### **Duplex Operation**

Up to A4/LT (8<sup>1</sup>/<sub>2</sub>" x 11") LEF

There are three sheets of paper in the paper feed path at the same time. The interleave method is used.

The drawing above shows the paper movement with the interleave method for three sheets of paper. The printing is done as follows:

### From A4/LT ( $8^{1}/_{2}$ " x 11") LEF to 400mm length

There are two sheets of paper in the paper feed path at the same time. The interleave method is used. For sheets longer than 400 mm, there is no interleaving.

The drawing above shows the paper movement with the interleave method for two sheets of paper. The printing is done as follows:

### **Printer Functions**

### Overview

The controller is based on the GW architecture.

### CPU: RM7035C-600 MHz

### 

This is one of the GW-architecture ASICs. : GW architecture ASIC. It controls the interface with the CPU and controls these functions: memory, local bus interrupts, PCI bus, video data, HDD, SD card for booting and image processing.

### SHAKER:

IO control ASIC. It controls the network, operation panel, USB port, SD cards.

### SDRAM DIMM (2 slots):

The controller has 1024-MB resident SDRAM.

### Flash ROM:

32 MB flash ROM programmed for the boot system.

### SD card (Boot):

The 32 MB SD card installed in the SD card slot #1 includes the program for system, network application, printer, PCL5c, PS3 and RPCS applications and internal printer fonts.

### NVRAM:

128 KB for the machine parameters, logged data and a record of the number of pages printed for each "User Code".

### Network Interface:

100BASE-TX/10BASE-T

### USB Interface:

USB2.0

### IEEE 1394 Interface (option):

Supports a data transfer speed of up to 400 Mbps.

### IEEE 1284 Interface (option):

This is a parallel printer port.

### IEEE 802.11b (option):

This lets you connect the machine to a wireless network.

### Bluetooth (option):

This lets you connect the machine to a Bluetooth network.

### USB Host (option):

This is for the connection of an external device (digital camera etc.).

I/F Slot	Item
Slot A	IEEE 1394 or USB Host
Slot B	IEEE 1284 or IEEE 802.11b or Bluetooth
Slot C	File format converter

### HDD:

3.5" HDD (40 GB) can be connected using the IDE interface.

### SD Card slots:

- Slot 1: Boot SD card (standard printer/scanner application SD card)
- Slot 2: Optional application (for PostScript 3, Data Overwrite Security Unit or PictBridge)
- Slot 3: Firmware upgrade or Browser Unit (RDS Ricoh Document Server)

Hard Disk

#### Overview

The capacity of the hard disk is 40 GB. The controller partitions it into several drives and allocates them for different functions. You can initialize these partitions as necessary ( SP5-832). The table lists the contents of the hard disk.

Contents	Capacity (MB)	Volatile/ Nonvolatile	Initialization (SP5-832)
Images (IMH)	18,340	Nonvolatile	002
	12,844	Volatile	002
Thumbnails	2400	Nonvolatile	003
Job Logs	200	Nonvolatile	004
Printer fonts	500	Nonvolatile	005
User information	300	Nonvolatile	006
Mail RX data	200	Nonvolatile	007
Mail TX data	1,000	Nonvolatile	008
Designer data	512	Nonvolatile	009
Logs	150	Nonvolatile	-
Net interfaces	500	Nonvolatile	011

Volatile: The data is lost when you turn the main switch off.

Nonvolatile: The data is not lost when you turn the main switch off.

#### **Controller Functions**

### Sample Print

This feature was formerly known as "Proof Print." This function gives users a chance to check the print results before starting a multiple-set print run.

- The size of the hard disk partition for the sample print feature is 16.8 GB. This partition is also used by the collation and locked print features.
- The partition can hold up to 100 files, including files stored using locked print.

- The partition can hold a log containing up to 30 errors, excluding jobs stored using locked print.
- The maximum number of pages is 2,000, including jobs using locked print and collation.

### Locked Print

Using this feature, the print job is stored in the machine but will not be printed until the user inputs an ID and a password at the machine's operation panel. These ID and password must match the ID and password that has been input with the printer driver.

- Stored data is automatically deleted after it is printed.
- Stored data can be manually deleted at the operation panel.
- The partition can hold up to 100 files, including files stored using sample print.
- The partition can hold a log containing up to 30 errors, excluding logs stored using locked print.
- The maximum number of pages is 2,000, including jobs using sample print and collation.
- Locked print uses the same hard disk partition (16.8 GB) as sample print and collation.

### Hold Print

Using this feature, the print job is stored in the machine but will not be printed until the user inputs an ID at the machine's operation panel. This ID must match the ID that has been input with the printer driver.

• Stored data is automatically deleted after it is printed.

### Stored Print/ Store and Print

Using this feature, the same stored files can be printed repeatedly without PC operation or stored files can be printed during receiving files even the file data has not been received completely.

#### Job Spooling

Print data can be spooled (stored) in the machine's HDD, and the machine starts to print when data transfer is complete. Since the machine stores all data first before printing, the host computer is freed up more quickly.

Vote Note

- The supported print protocols are IPP and LPR.
- The default setting for this feature is "off". The user must switch it on using UP mode to enable this feature.
- The size of the HDD partition for job spooling is 1 GB.

• The partition can hold up to 150 jobs.

### **Related SP Modes**

Job spooling can be turned on and off using the SP mode (SP5-828-069) for each protocol. The machine does not spool jobs when job spooling is switched off with the SP mode, even when the customer switches it on with the user mode.

### Paper Source Selection

The "Tray Priority" setting determines the start of the tray search when the user selects "Auto Tray Select" with the driver. The machine searches paper trays for the specified paper size and type.

When no tray contains paper that matches the paper size and type specified by the driver, the controller stops printing until the user loads the correct paper.

The "Tray Priority" setting can be specified in the following menu: 🐼 > System Settings > Tray Paper Settings > Paper Tray Priority: Printer.

Vote Note

• The by-pass feed table is not part of the tray search.

### **Tray Locking**

If "Tray Locking" is enabled for a tray, the controller skips the "locked" tray in the tray search process.

The "Tray Locking" setting can be specified in the following menu: 2 System Settings > Tray Paper Settings > Paper Type: Tray # > Apply Auto Paper Select (where the "#" indicates the tray number).

The by-pass feed table cannot be unlocked (Tray Locking is always enabled).

### Manual Tray Select

If the selected tray does not have the paper size and type specified by the driver, the controller stops printing until the user loads the correct paper.

### Auto Continue

### Overview

When this function is enabled, the machine waits for a specified period (0, 1, 5, 10, 15 minutes) for the correct paper size and type to be set in the tray. If the timer runs out, the machine starts printing, even if there is no paper tray which matches the paper size and paper type specified by the driver.

The machine searches for a paper tray in the following way:

 The interval can be set with the following menu: Printer Features > System > Auto Continue.

#### 🔸 Note

• The default setting for this feature is "Off."

### Auto Tray Select

When there is no paper tray that matches the paper size and type specified by the driver, the machine searches for any tray that has paper, and prints from the first tray it finds. The start of the tray search is the tray selected as the priority tray.

### Manual Tray Select

The machine prints from the selected tray even if the paper size and type do not match the setting specified from the driver.

If "Auto Continue" is disabled, the machine waits until the user loads the correct paper in the tray.

### PictBridge

### General Function

The PictBridge function can make a PictBridge-standard DSC (Digital Still Camera) connect with the machine using a USB cable. As a result, photographs in the DSC can be printed directly with a machine that has the PictBridge application.

### Photo image format

- Exif/JPEG
- JFIF
- TIFF/MMR (Ricoh cameras only)

### 🔸 Note

 It is possible to connect more than one DSC at the same time, but it is only possible to print from one DSC. If more than one DSC is connected, you can only print from the first DSC that was connected.

**Printing Function List** 

Name	Requirement for PictBridge Standard	AT-C1
Single image printing	Must	Available
Selected image printing	Must	Available
DPOF printing	Recommended	Not available
All image printing	Must	Available
Index printing	Recommended	Available
Trimming	Recommended	Available
Multiple number printing	Must	Available
Date and file name printing	Recommended	Available
Paper size	Must	Available
Image print size	Recommended	Available

Multi-Image-Layout (N-up)	Recommended	Available
Edge-to-edge borderless printing	Recommended	Not available
Printing quality	Optional	Available
Color matching	Optional	Available
Paper type specification	Optional	Available
Form printing	Ricoh	Available
Camera memo printing	Ricoh	Available

Printing Function Description

### Single image printing

This function can print an image displayed on the DSC. The image is enlarged and rotated to match the paper, but the image aspect ratio is not changed.

### Selected image printing

This function can print two or more images selected from the display on the DSC. If landscape and portrait images are mixed in one job, the paper feed direction is fixed following the first image direction.

**Detailed Section Descriptions** 

DPOF (Digital Print Order Format) printing

This function is not available in this machine.

All image printing

This function can print all images in the DSC.

Index printing

This function can print all images as thumbnail photos with index format. The size of the photos is fixed at 20 mm x 20 mm.

Paper Size	Number of Photos	
A3	192	16 x 12
A4	96	12 x 8
A5	40	8 x 5
Letter	80	10 x 8
B4	140	14 x 10

🔸 Note

Some digital cameras have a limitation on the maximum photo number in a print job.
 If the number of photos in a page is more than the maximum photo number in a job,
 a form feed may be inserted between the thumbnail photos.

Trimming

This function can print a part of an image by specifying a clip area.

Multiple number printing

This function can print multiple images from the same image according to ordered number and layout. If the photos are printed with a multiple number printing function, and there are an odd number of photos in a page, the photo will not be printed.

Vote Note

 If a layout is not selected (like 2 up or 4 up for example), each image will be printed on one page.

**Example 1**: Photo A: 2, Photo B: 3 with 4-up printing In this case, Page 2 will not be printed.

Example 2: Photo A: 2, Photo B: 4 with 2-up printing

In this case, all photos will be printed.

#### Date and file name printing

This function can impose a date stamp and file name under each image. A data stamp and file name are imposed in the following style:

- Position: It is centered under each image.
- Font color: Black
- Font type: Arial
- Font size: 6 pt to 16 pt depending on printing size

### Image print size (Fixed size printing)

[A]: Specified printing size, [B]: Paper

This function can print images with the size specified on the camera.

- The image is enlarged to match the specified size.
- The image is not rotated.
- The image aspect ratio is not changed.
- If the specified aspect ratio is different from the image aspect ratio, the image aspect ratio is automatically adjusted to the specified aspect ratio even this deletes part of the image.

Vote Note

- If the new ratios of height and width magnification are different, the larger magnification ratio is used to adjust the image to the specified printing size.
- An error occurs if the specified size is larger than the actual paper size.

3.25" x 2.5"	8cm x 6cm
5" x 2.5"	10cm x 7cm
6" x 4"	13cm x 9cm
7" x 5"	15cm x 10cm
10" x 8"	18cm x 13cm
254mm x 178mm	21cm x 15cm
110mm x 74mm	24cm x 18
89mm x 55mm	
148mm x 100mm	

Multi-Image-Layout (N-up)

This function can print multiple images on the specified paper.

4-up

The number and arrangement of images can be specified as shown in the following list.

Number of images	Vertical x Horizontal images	Paper direction
2	2 x 1	Portrait
4	2 x 2	Landscape
8	4 x 2	Portrait
9	3 x 3	Landscape
16	4 x 4	Landscape
25	5 x 5	Landscape
32	8 x 4	Portrait
36	6 x 6	Landscape
49	7 x 7	Landscape
64	8 x 8	Landscape

The number of images	printed on a nea	a aan ha aa ahaw	in the following list
The number of images	printed on a page	e can be as shown	i in the following list.

Number of images
2, 4, 8, 9
2, 4
2, 4

Vote Note

 A form feed may be inserted between images depending on the DSC in use. Also, printing in the specified way may not be possible depending on the specification for the number of images to be printed.

Edge-to-edge borderless printing

This function is not available in this machine.

### **Detailed Section Descriptions**

### Printing quality

$\mathbf{T}$		· · · · · · · · · · · · · ·	· · · · · · · · · · · · · · · · · · ·
This function ca	in print imades	in the selected	printing quality.

Normal or Default	600dpi x 600dpi (2bit)
Fine	600dpi x 600dpi (4bit)

Color matching

This function can optimize colors when printing images.

OFF or Default	Gradation
ON	Saturation

Paper type specification

This function can match the paper type names between the machine and DSC. When this function sends the machine's paper type information to the DSC, the names of paper types displayed on the DSC's screen are different from the names displayed on the machine. So, it is possible to match the paper type names with this function.

Default	Auto tray selection
Plain paper	Plain or recycled paper

### Form printing

This function can print images in a predetermined layout format.

[E]	
Α	
A	

[A]: Image size A4: 170mm x 128mm LT: 174.5mm x 120mm

[B]: Image size A4: 120mm x 90mm LT: 112.5mm x 92mm

[C]: Image size A4: 86mm x 65mm LT: 88mm x 61mm

[D]: Image size A4: 86mm x 65mm LT: 88mm x 61mm

[E]: Image size A4: 152.4mm x 108mm LT: 156.7mm x 102.6mm

### Camera memo printing

This function can print text data with an image if it is attached to the image.

### Copy Data Security Unit

### General Function

This function can prevent unauthorized copying by making a special masking pattern with an embedded message when an original is printed. This enables the machine to make grayed-out output when it is copied.

Confidential documents can never be duplicated on a machine that has the optional Copy Data Security Unit.

The embedded messages appear when a confidential document is copied on a machine without an optional Copy Data Security Unit.

However, some MFP functions are disabled if this function is enabled.

- Reduction less than 50% is disabled.
- Scanner/Fax application is disabled.

### When copying on a machine with an optional Copy Data Security Unit

### When copying on a machine without an optional Copy Data Security Unit

|--|

#### Setting

This function can be turned on or off with a user tool (User Tools < System Settings <Administrator Tool) or SP5-178-001 (0: Disabled, 1: Enabled).

Related SC

If the "Copy Data Security Unit" is removed when the Copy Data Security Setting is On (SP5-178-001:"1"), SC165 occurs. This SC prevents someone from removing the Copy Data Security Unit "illegally".

### Mask Type for copying

This function can prevent unauthorized copying by making masking patterns with an embedded message when making an original print. Masking patterns are good for printing documents that must not be copied. The embedded messages appear when the document is copied.

Five print densities (level 1 to 5) can be selected for the masking patterns. (Default: level 3) and 10 masking patterns can be selected from the RPCS driver.

Vote Note

Some digital MFPs might not be able to detect the masking patterns. If the density of
masking patterns on the output print is too light due to the settings of the machine or
a mechanical problem, the pattern might not be detected.

### File Format Converter (MLB)

In this machine, this conversion is hardware-based, using the optional File Format Converter. Without the File Format Converter, copy and print jobs cannot be downloaded to a PC (or e-Cabinet) from the document server.

Two common target formats are provided for conversion to files that can be selected by the SP modes: These are JPEG and TIFF.

In scanner mode, users can select file format from TIFF, JPEG, or PDF. The time to create TIFF and JPEG files is shortened with the File Format Converter, especially for high scanning resolution and large image size. When the customer selects PDF, the machine creates a TIFF or JPEG file from the scanned image first. Then it converts it to PDF. Therefore, the total time to create a PDF is also shortened with the File Format Converter.

### Data Overwrite Security Unit (B735)

#### Auto Erase Memory

A document scanned in the copier or scanner mode, or data sent from a printer driver for printing, is stored temporarily on the hard disk of the machine. The document stays in the hard disk as temporary data even after the copy or print job is completed. Auto Erase Memory erases the temporary data on the hard disk by writing over it.

### Types of Data Overwritten and Not Overwritten

The following table shows the types of data that can or cannot be overwritten by Auto Erase Memory.

	Copier	Copy jobs
Data overwritten by Auto Erase Memory	Printer	<ol> <li>Print jobs</li> <li>Sample Print/Locked Print jobs(*1)</li> <li>Spool Printing jobs</li> </ol>
	Scanner(*2)	<ol> <li>Scanned files sent by e-mail</li> <li>Files sent by Scan to Folder</li> <li>Documents sent or retrieved by using Web Image Monitor, Desk Top Binder, or Scan Router</li> </ol>
	Fax	PC fax print jobs, Internet fax transmission jobs
	Document Server	Temporary data that still remains in the Document Server even after user erases the data in the Document Server.
Data not overwritten by Auto Erase Memory	the Copier, Print 2) Information re	tored by the user in the Document Server using er or Scanner functions egistered in the Address Book (*3) red under each user code

🔸 Note

• \*1: A Sample Print or Locked Print job can only be overwritten after it has been

executed.

- \*2: Temporary data via TWAIN scanner function are not originally stored in HDD.
   You can use TWAIN scanner functions together with the DOS unit.
- \*3: Data stored in the Address Book can be encrypted for security.

### Overwrite timing

Overwriting starts automatically once a copy, print or scanner job is completed.

Copier, printer and scanner functions take priority over the Data Overwrite function. If a copier, printer or scanner job comes while a previous job is being overwritten, the overwrite process is automatically interrupted until the next job is completed.

# General Specifications

### Main Frame

Configuration:	Desktop
Print Process:	Laser beam scanning & Dry electrostatic transfer system 4 drums tandem method
Number of scans:	1

\*1: Use SP4-303 to detect original sizes as A5 lengthwise/HLT when the message "Can-t

detect original size" shows.

- \*2: The machine can detect the paper size depending on the setting of SP6-016-1.
- \*3: The machine can detect the paper size depending on the setting of SP4-305-1.
- \*4: The machine can detect the paper size depending on the setting of SP5-126-1.

## Software Accessories

The printer drivers and utility software are provided as following two CD-ROMs

1: Printer Drivers and Utilities CD-ROM

2: Scanner/PostScript® Drivers and Utilities CD-ROM.

An auto-run installer lets you to select the components you want to install.

Printer	Drivers
1 111100	0111010

Printer Language	Windows 95/98/ME	Windows NT4.0	Windows 2000/XP/2003	Macintosh
PCL 5c / PCL6	Yes	Yes	Yes	No
PS3 *2)	Yes	Yes	Yes	Yes
RPCS	Yes	Yes	Yes	No

🔸 Note

- The PCL5c/6 and RPCS drivers are provided on the printer drivers CD-ROM
- The PS drivers are provided on the Scanner/PostScript<sup>®</sup> Drivers and Utilities CD-ROM.
- The printer drivers for Windows NT 4.0 are only for the Intel x86 platform. There is no Windows NT 4.0 printer driver for the PowerPC, Alpha, or MIPS platforms.
- The PS3 drivers are all genuine AdobePS drivers, except for Windows 2000/XP/2003. Windows 2000 uses Microsoft PS. A PPD file for each operating system is provided with the driver.
- The PS3 driver for Macintosh supports Mac OS X 10.1 or later versions.

#### Scanner and LAN FAX drivers

Printer Language	Windows 95/98/ME	Windows NT4.0	Windows 2000/XP/2003	Macintosh
Network TWAIN	Yes	Yes	Yes	No
LAN-FAX	Yes	Yes	Yes	No

Vote Note

The Network TWAIN and LAN FAX drivers are provided on the scanner drivers

CD-ROM.

 This software lets you fax documents directly form your PC. Address Book Editor and Cover Sheet Editor are to be installed as well. (These require the optional fax unit.)

Utilitv	Software
Cuncy	001111010

Software	Description
Font Manager 2000 (Win9x/ME, 2000/XP/2003, NT4)	A font management utility with screen fonts for the printer This is provided on the printer drivers CD-ROM
SmartDeviceMonitor for Admin (Win9x/ME, 2000/XP/2003, NT4)	A printer management utility for network administrators. NIB setup utilities are also available. This is provided on the printer drivers CD-ROM
DeskTopBinder – SmartDeviceMonitor for Client (Win9x/ME, 2000/XP/2003, NT4)	A printer management utility for client users. A utility for peer-to-peer printing over a NetBEUI or TCP/IP network. A peer-to-peer print utility over a TCP/IP network. This provides the parallel printing and recovery printing features. This is provided on the printer drivers CD-ROM
IEEE1394 Utility (Win2000/XP)	This utility deletes a print port for IEEE1394 in Win2000. This is provided on the printer drivers CD-ROM
Printer Utility for Mac (Mac)	A utility for peer-to-peer printing over a NetBEUI or TCP This software provides several convenient functions for printing from Macintosh clients. This is provided on the scanner drivers CD-ROM
DeskTopBinder Lite (Win9x/ME, 2000/XP/2003, NT4)	DeskTopBinder Lite itself can be used as personal document management software and can manage both image data converted from paper documents and application files saved in each client's PC. This is provided on the scanner drivers CD-ROM

Staple capacity:	Single size: 50 sheets: A4, 8.5" x 11" or smaller 30 sheets: B4, 8.5" x 14" or larger
Staple position:	3 positions 1-staple: 2 positions (Top Left, Top Right)

21-Apr-2006

	2-staples: 1 positions		
Staple replenishment:	Cartridge (5000 staples)		
Power consumption:	60 W		
Dimensions (W x D x H):	535 mm x 600 mm x 930 mm (21.1" x 23.6" x 36.6")		
Weight	Without punch unit:	48 kg (105.8 lb.)	
Weight	With punch unit:	50 Kg (110.3 lb.)	

## 1000-Sheet Finisher

## Upper Tray

Paper Size:	A3 to A6 11" x 17" to 5.5" x 8.5"
Paper Weight:	60 to 157 g/m <sup>2</sup> (16 to 42 lb.)
Paper Capacity:	<ul> <li>250 sheets (A4 LEF/8.5" x 11" SEF or smaller)</li> <li>50 sheets (A4, 8.5" x 11" or smaller)</li> <li>30 sheets (B4, 8.5" x 14" or larger)</li> </ul>

### Lower Tray

Paper Size:	No staple mode: A3 to B5, DLT to HLT Staple mode: A3, B4, A4, B5, DLT to LT
Paper Weight:	No staple mode: 60 to 157 g/m <sup>2</sup> (16 to 42 lb) Staple mode: 64 to 90 g/m <sup>2</sup> (17 to 24 lb)
Stapler Capacity:	30 sheets (A3, B4, DLT, LG) 50 sheets (A4, B5 LEF, LT)
Paper Capacity:	No staple mode: 1.000 sheets (A4/LT or smaller: 80 g/m <sup>2</sup> , 20 lb.)
	500 sheets (A3, B4, DLT, LG: 80 g/m <sup>2</sup> , 20 lb.)

	Staple mode: (80 g/m <sup>2</sup> , 20 lb., number of sets)			
	Set Size	2 to 9	10 to 50	
	Size		10 to 30	31 to 50
	A4/LT LEF B5 LEF	100	100 to 20	100 to 20
	A4/LT SEF	100	50 to 10	50 to 10
	A3, B4, DLT, LG	50	50 to 10	—
Staple positions:	1 Staple: 2 positions 2 Staples: 2 position			
Staple Replenishment:	Cartridge (5,000 sta	ples/cartridge	e)	
Power Source:	DC 24 V, 5 V (from	the copier/pri	nter)	
Power Consumption:	50 W			
Weight:	25 kg (55.2 lbs)			
Dimensions (W x D x H):	527 x 520 x 790 mn	n (20.8" x 20.9	5" x 31.1")	

### 500-Sheet Finisher

Paper Size:	A3 to B6 (SEF)
Paper Weight:	52 to 128 g/m <sup>2</sup> (14 to 34 lb.)
Tray Capacity:	500 sheets: A4, LT or smaller 250 sheets: B4, LG or larger
Staple capacity:	30 sheets (A3, B4, DLT, LG) 50 sheets (A4, LT or smaller)
Staple position:	3 positions 1-staple: 2 positions (Top right-oblique, Top left-oblique) 2-staples: 1 positions (Left)
Staple replenishment:	Cartridge (5000 staples)

Bridge Unit

Paper Size:	Standard sizes A6 SEF to A3, HLT to DLT Non-standard sizes Width: 90 to 305 mm Length: 148 to 600 mm
Paper Weight:	52 g/m <sup>2</sup> to 253 g/m <sup>2</sup> , 16 lb. to 78 lb.
Power Source:	DC 24 V, 5 V (form the copier/printer)
Dimensions (W x D x H):	415 mm x 412 mm x 111 mm (16.3" x 16.2" x 4.4")
Weight	5 kg (11 lb.)

## Shift Tray Unit

Paper Size:	Paper Width: Less than 305 mm Paper Length: Less than 432 mm
Paper Weight:	52 to 253 g/m <sup>2</sup> , 14 to 67 lb.
Tray Capacity:	125 sheets (80 g/m <sup>2</sup> , 20 lb.): B4 or larger 250 sheets (80 g/m <sup>2</sup> , 20 lb.): A4 or smaller
Power Source:	DC 24 V, 5 V (from the copier)
Power Consumption:	10 W
Weight:	2 kg
Size (W x D x H):	421 mm x 457 mm x 116 mm (16.6" x 18.0" x 4.6")

# 1-bin Tray Unit

Paper Size:	Standard Size: A3 /DLT to A6/ HLT SEF
Paper Weight:	60 to 169 g/m <sup>2</sup> , 16 to 45 lb.
Tray Capacity:	125 sheets (80 g/m <sup>2</sup> , 20 lb., A4)

Power Source:	DC 24 V, 5 V (from the copier)
Power Consumption:	1 W or less
Weight:	2 kg
Size (W x D x H):	520 mm x 395 mm x 120 mm (20.5" x 15.6" x 4.7")
