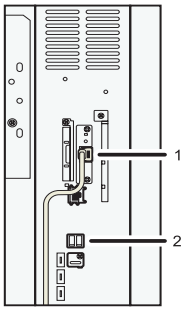
Notes for Color Controller E-45A/E-85A

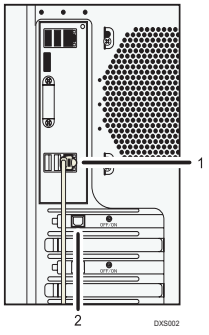
■ Connecting to the Interfaces

<Pro C7200/C7210>



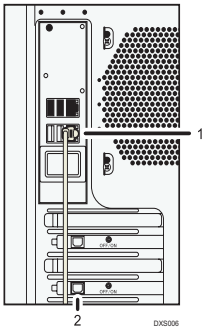
1. Ethernet port for color controller
2. USB port for color controller

<Color Controller E-45A>



1. Ethernet port for color controller
2. USB port for color controller

<Color Controller E-85A>



1. Ethernet port for color controller
2. USB port for color controller

<Important>

- Use the USB port shown above, if your Color Controller E-45A/E-85A has two USB ports on the back.

■ Interlocking the main power of Color Controller E-45A/E-85A

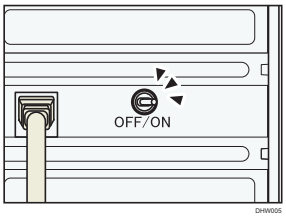
Color Controller E-45A/E-85A has a function to interlock the main power with the printer. By turning this function on in Color Controller E-45A/E-85A, the color controller's power goes off when the printer is turned off.

Turning the interlock function on and off is done via a switch above the printer interface board at the rear of Color Controller E-45A/E-85A. When the switch is set to OFF, the interlock function is turned off, and when the switch is turned to ON, the interlock function is turned on.

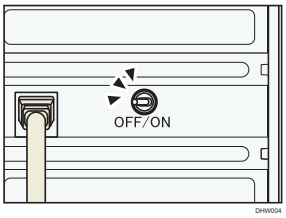
Color Controller E-45A/E-85A has the Low Power Mode function. In order to receive the print job data all times, the default setting is OFF.

■ Switch for interlocking the main power of Color Controller E-45A/E-85A

<ON>



<OFF>



<Important>

- **Use the selector switch while the Color Controller E-45A/E-85A is turned off.**
- **If you are using Color Controller E-45A/E-85A which has two switches on the back, turn on the switch next to the USB port shown in "Connecting to the Interfaces".**

■ Turning Off the Main Power

<Important>

- Do not turn off the main power switch on the backside of the Color Controller E-45A/E-85A when the operation switch indicator on the upper side of the controller is lit or flashing. Doing so may result in damage to the hard disk or memory.
- Make sure to turn off the main power switch before pulling out the power plug on the backside of the Color Controller E-45A/E-85A. Not doing so may result in damage to the hard disk or memory, leading to malfunctions.
- After turning off the main power switch of the printer, wait for two minutes or more before turning it on again.

■ <When interlocking function is set to ON>

1. **Shut down the main power of printer.**
2. **The main power of Color Controller E-45A/E-85A is shut down in synchronization.**
   ***Do not use the key on control panel of the printer.**

■ <When interlocking function is set to OFF>

1. **Press Home ( ) on the center bottom of the printer's control panel, and press the [EFI Fiery] icon of the [Home] screen.**
2. **Press the [Fiery] tab.**
3. **Press [Restart Fiery], and then press [Shut Down].**
4. **Press [OK].**
5. **Press the operation switch to turn off the operation switch indicator.**
6. **Make sure the operation switch indicator is unlit.**
7. **Open the cover of the main power switch on the front left of the printer.**
8. **Turn off the main power switch.**
9. **Close the front left cover.**

■ Notes when interlocking function is OFF

<Important>

- When shutting down the printer, be sure to shut down the main power of Color Controller E-45A/E-85A.
- Be sure to turn the main power of Color Controller E-45A/E-85A on within one hour of turning on the main power of the printer.
- When turning the main power ON, turn on the printer first, then turn on Color Controller E-45A/E-85A.
