Model J-P3 (Machine Code: G106)

SERVICE MANUAL

Subject to change 20 February 2004

MIMPORTANT SAFETY NOTICES

PREVENTION OF PHYSICAL INJURY

- 1. Before disassembling or assembling parts of the printer and peripherals, make sure that the printer power cord is unplugged.
- 2. The wall outlet should be near the printer and easily accessible.
- 3. If any adjustment or operation check has to be made with exterior covers off or open while the main switch is turned on, keep hands away from electrified or mechanically driven components.
- 4. The printer drives some of its components when it completes the warm-up period. Be careful to keep hands away from the mechanical and electrical components as the printer starts operation.
- 5. The inside and the metal parts of the fusing unit become extremely hot while the printer is operating. Be careful to avoid touching those components with your bare hands.

HEALTH SAFETY CONDITIONS

Toner and developer are non-toxic, but if you get either of them in your eyes by accident, it may cause temporary eye discomfort. Try to remove with eye drops or flush with water as first aid. If unsuccessful, get medical attention.

OBSERVANCE OF ELECTRICAL SAFETY STANDARDS

- 1. The printer and its peripherals must be serviced by a customer service representative who has completed the training course on those models.
- 2. The NVRAM module (option) installed on the controller has a lithium battery which can explode if replaced incorrectly. Replace the NVRAM only with an identical one. The manufacturer recommends replacing the entire NVRAM. Do not recharge or burn this battery. Used NVRAM must be handled in accordance with local regulations.
- 3. The optional fax and memory expansion units contain lithium batteries, which can explode if replaced incorrectly. Replace only with the same or an equivalent type recommended by the manufacturer. Do not recharge or burn the batteries. Used batteries must be handled in accordance with local regulations.

SAFETY AND ECOLOGICAL NOTES FOR DISPOSAL

- 1. Do not incinerate toner bottles or used toner. Toner dust may ignite suddenly when exposed to an open flame.
- 2. Dispose of used toner, the maintenance unit which includes developer or the organic photoconductor in accordance with local regulations. (These are non-toxic supplies.)
- 3. Dispose of replaced parts in accordance with local regulations.
- 4. When keeping used lithium batteries in order to dispose of them later, do not put more than 100 batteries per sealed box. Storing larger numbers or not sealing them apart may lead to chemical reactions and heat build-up.
- 5. Dispose of used fusing oil in accordance with local regulations.

LASER SAFETY

The Center for Devices and Radiological Health (CDRH) prohibits the repair of laser-based optical units in the field. The optical housing unit can only be repaired in a factory or at a location with the requisite equipment. The laser subsystem is replaceable in the field by a qualified Customer Engineer. The laser chassis is not repairable in the field. Customer engineers are therefore directed to return all chassis and laser subsystems to the factory or service depot when replacement of the optical subsystem is required.

Use of controls, or adjustment, or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

WARNING: Turn off the main switch before attempting any of the procedures in the Laser Optics Housing Unit section. Laser beams can seriously damage your eyes.

CAUTION MARKING:

1. INSTALLATION

1.1 INSTALLATION REQUIREMENTS

1.1.1 ENVIRONMENT

- 1. Temperature Range: 10°C to 32°C (50°F to 89.6°F)
- 2. Humidity Range: 15% to 80% RH
- 3. Ambient Illumination: Less than 2,000 lux (do not expose to direct sunlight)
- 4. Ventilation: 3 times/hr/person or more
- 5. Avoid exposing the machine to sudden temperature changes, which include:
 1) Direct cool air from an air conditioner
 2) Direct heat from a heater
- 6. Avoid installing the machine in areas that might be exposed to corrosive gas.
- 7. Install the machine at a location lower than 2,500 m (8,200 ft.) above sea level.
- 8. Install the machine on a strong, level base (1.1.2).
- 9. Avoid installing the machine in areas that may be subjected to strong vibration.

1.1.2 MACHINE LEVEL

Front to back: Within 5 mm (0.2")

Right to left: Within 5 mm (0.2")

nstallation

1.1.3 MACHINE SPACE REQUIREMENT

Install the machine near the power source. The diagrams show the necessary space.

Printer

A: Over 460 mm (18") B: Over 100 mm (4") C: Over 550 mm (22") D: Over 700 mm (28")

G106I901.WMF

Printer and Finisher

G106I902.WMF

- [A]: Over 460 mm (18")
- [B]: Over 100 mm (4")

[C]: Over 550 mm (22") [D]: Over 700 mm (28")

1.1.4 POWER REQUIREMENTS

- 1. Insert firmly the plug in the outlet.
- 2. Avoid using an outlet extension plug or cord.
- 3. Ground the machine.
- 1. Input voltage level: 120 V, 60 Hz: More than 12 A 220 V \sim 240 V, 50 Hz/60 Hz: More than 7 A
- 2. Permissible voltage fluctuation: ±10%
- 3. Do not put or place anything on the power cord.

1.2 OPTIONAL UNIT COMBINATIONS

No.	Options	Remarks
1	One-tray paper feed unit	
2	Two-tray paper feed unit	You can install one of these three
3	Large capacity tray	
4	Two-tray finisher	One from No. 4 and No. 6; No. 8 necessary
5	Punch kit (3 types)	No. 4 necessary; One of the three types
6	Booklet Finisher	One from No. 4 and No. 6; No. 8 necessary
7	Punch unit (4 types)	No. 6 necessary; One of the four types
8	Duplex unit	
9	64 MB memory	
10	128 MB memory	You can install one of these three
11	256 MB memory	
12	40 GB HDD unit	
13	IEEE 1284	
14	IEEE 1394	You can install one of these four
15	IEEE 802.11b	
16	Bluetooth	1
17	NVRAM memory	

1.3 PRINTER

1.3.1 POWER SOCKETS FOR PERIPHERALS

1.3.2 INSTALLATION FLOW CHART

The flow chart shows the installation procedure.

The two-tray finisher and the booklet finisher require ① the duplex unit and ② an optional paper tray unit or the LCT. Each punch unit is dedicated to the two-tray finisher or the booklet finisher.

1.3.3 INSTALLATION AND SETTINGS

For the installation procedure, see the Operating Instructions. After you install the printer, make the settings that are necessary for the service contract. When you make the settings, use caution:

- 1. Check the contract type carefully before you do steps 2 and 3. If you make the wrong settings, you cannot change some settings back again.
- 2. You must enable Meter Charge (SP5-930-001) for any meter click counter contract. The default is "OFF" (disabled).
- 3. If you set Meter Charge to "ON", you must set Counter Methods (SP5-045) (developments/prints) in accordance with the contract (← 5.3.1). If you change the setting from "Prints" (default) to "Developments," you cannot change the setting back again.

Service Program	Function
Meter Charge > ON/OFF	Enables or disables the Meter Charge. (Default: OFF
(SP5-930-001)	[Disabled])
	When enabled:
	 The Counter menu appears immediately after you push the Menu key. The Counter Method (SP5-045) sets the type of the counter.
	 You can print the counter from the Counter menu.
	 When the ACS mode is on, a monochrome page is counted as such even if it follows a color page. When disabled:
	 The Counter menu is not displayed.
	 The total counter starts from 0 (zero).
	 When the ACS mode is on, a monochrome page is counted as a color page if it follows a color page.
Meter Charge > Menu (SP5- 930-003)	Enables or disables the PM Alert for the PCUs, development units, and fusing unit. (Default: Click 1 [Enabled])
	When the PM Alert is enabled, a message is displayed when one of the units needs to be replaced.
Meter Charge > Paper Transfer (SP5-930-005)	Enables or disables the PM Alert for the transfer unit and transfer cleaning unit. (Default: No Alert [Disabled])
Counter Method (SP5-045)	Tells the counter when to count (each development or each print). (Default: 1 [Prints])
Double Count (SP5-104)	Specifies whether the counter increase by +1 or by +2 when the paper size is A3 or 11" x 17". (Default: OFF [by +1])
Telephone Number Setting > Service (SP5-812-001)	Shows or sets the telephone number of the service representative.
Telephone Number Setting > Fax Telephone Number SP5-812-002	Shows or sets the fax number of the service station. The number is printed on the counter list when the Meter Charge is enabled. The user can send a fax message with the counter list.

The table shows the SP Mode settings related to service contracts.

PRINTER

1-7

1.3.4 MOVING THE MACHINE

Make sure that the transfer belt is in its correct position before moving the printer, otherwise the transfer belt and the black PCU may be damaged.

NOTE: This section assumes that you manually move the machine to a different floor in the same building. When using transportation equipment, see section 1.3.5.

The supports on the paper feed unit or LCT make it difficult to move the machine. You can remove them as necessary.

- 1. Check that the transfer belt is in the correct position.
- Remove the supports [A] from both sides (²/_ℓ x 2 for each).

CAUTION: After moving the machine, reinstall the supports. Without them, the machine may tip over when you draw out a paper tray or while you work on the printer.

1.3.5 TRANSPORTING THE MACHINE

Read this section when you use transportation equipment to move the machine. When you manually move the machine to a different floor in the same building, see section 1.3.4. Installation

After a Machine Test

If you install the machine in your office to do a test before you send the machine to the user, do these steps.

- 1. When you do your tests
- Do not use the oil supply unit that comes as an accessory with the machine.
- 2. When you send the machine after the tests:
- Remove the oil supply unit that you used for the tests.

If you keep the oil supply unit installed in the machine, the oil supply roller in the fusing unit can move up and down during transportation. As a result, the oil supply roller constantly supplies oil to all the fusing mechanism. This oil can cause damage to the fusing mechanism, especially to the holder at the bottom of the unit.

Transporting a Used Machine

When you move a used machine to a different location, you must discard the oil supply unit (After a Machine Test). After you install the machine at a new location, install a new oil supply unit.

Necessary Adjustment after Transportation

After you install the machine at a new location, do the Line Adjustment (SP5-993-002) or the Auto Adjustment (Menu > Maintenance > Color Regist. > Auto Adjust). When you do one of these programs, make sure that the tray fences are set correctly. If not set correctly, tray fences can make color images shift.

Preparing the Printer

Make sure that the transfer belt is in its correct position before moving the printer, otherwise the transfer belt and the black PCU may be damaged.

- 1. Check that the transfer belt is in its correct position.
- 2. Remove the supports (1.3.4).
- 3. Remove the toner bottles to prevent toner from flowing into the toner supply tubes during transport. This may cause the tube to be clogged with toner.
- 4. Put air packing into the toner cartridge holders to shield the toner supply entrances. This prevents toner from flowing out to the toner cartridge holders.
- 5. Set the lock pin [A] (which comes with the machine) in the transfer belt unit.

NOTE: The lower end of the transfer belt moves. The surfaces of the belt and PCU may be damaged by the friction between them if you transport the machine without locking the belt.

G106I906.WMF

- 6. Make sure there is no paper left in the paper trays and fix down the bottom plates with a sheet of paper and tape.
- 7. Empty out the waste toner bottle and attach securing tape to prevent the bottle from coming out.
- 8. Empty out the waste oil bottle and attach securing tape to prevent the bottle from coming out.

PRINTER

Installation

- 9. Turn the release lever [A] counterclockwise to its lowermost position. (The lever does not stay in this position if you do not hold it.) Stick the lever in this position with tape.
 - **NOTE:** The release lever lifts the transfer belt up and presses it against the black PCU. The surfaces of the belt and PCU may be damaged by the friction between them if you transport the machine with the two units in this position.

G106I907.WMF

10. Attach shipping tape to the covers and doors, or shrink-wrap the machine tightly.

Q'ty

1.4 OPTIONAL UNIT

1.4.1 TWO-TRAY FINISHER

Accessory Check

Check the quantity and condition of the accessories.

Description

1. Tray	2
2. Link-rail holder	1
3. Screw M4 x 8	2
4. Screw M4 x 12	6
5. Link rail	1
6. Duplex-unit support	1

Installation Procedure

Turn off the main switch of the printer and unplug its power cord before starting the installation procedure.

1. Remove all tape and packing materials.

OPTIONAL UNIT

G1061914.WME

[A]-

3. Remove the support on the left side [B] ($\hat{\mathscr{F}} \times 2$).

 Image: Constrained state

 Image: Constate

 Image: Constate</t

4. Set the link rail [C] on the link-rail holder [D].

Install the link-rail holder (with the link rail) [A] on the printer [B] (x 2).

Installation

 Install the duplex-unit support [C] on the duplex unit (𝔅 x 3).

- Adjust the position of the connection bracket [D] as necessary (𝔅 x 2):
 - Upper position for the printer with the two-tray paper feed unit or LCT.
 - Lower position for the printer with the one-tray paper feed unit.

Attach the rail [A] to the finisher [B]
 (𝔅 x 1).

G106I921.WMF

- 9. Connect the finisher [C] with the printer [D].
- 10. Connect the finisher cable to the connector of the printer.

Install the two trays [E]
 (
 ^ŷ x 1 for each).

OPTIONAL UNIT

- 12. Extend the external tray [A] of the printer.
- 13. Turn on the main power switch and check the operation.

1.4.2 PUNCH UNIT

Accessory Check

Check the quantity and condition of the accessories.

Description

Q'ty

1. Punch unit	1
2. Sensor arm	1
3. Spring	1
4. Screw M3 x 6	2
5. Step screw	2
6. Hopper	1
7. Spacer (2 mm)	1
8. Spacer (1 mm)	2

Installation Procedure

OPTIONAL UNIT

Installation

Switch off the main machine and unplug its power cord. If the two-tray finisher has been installed, disconnect it and pull it away from the machine.

G106I927.WMF

- 1. Unpack the punch unit and remove all tapes and shipping retainers.
- 2. Open the front door and remove the rear cover [A] ($\hat{\not}^2 \times 4$).
- 3. Remove the bracket [B] ($\hat{\beta} \times 2$) and paper guide [C] (stepped $\hat{\beta} \times 1$).

- 4. Remove the hopper cover [A] ($\hat{\mathscr{F}} \times 2$).
- 5. Install the sensor bracket [B] (stepped $\mathscr{F} \times 1$).
- 6. Install the spring [C].
- 7. Install the 2 mm spacer [D].
- 8. Install the punch unit [E] ($\hat{\mathscr{F}} \times 2$, stepped $\hat{\mathscr{F}} \times 1$).

nstallation

G106I930.WMF

G106I931.WMF

- 9. Connect the harnesses [A] and clamp them as shown.
- 10. Slide in the hopper [B].
- 11. Fasten the two 1-mm spacers [C] to the rear frame for future adjustment. **NOTE:** The spacers are used to adjust the horizontal positioning of the punch holes.
- 12. Reassemble the finisher and check the punch operation.

1.4.3 BOOKLET FINISHER

Accessory Check

Check the quantity and condition of the accessories.

Description	Q'ty
1. Regular tray	1
2. Rail holder	1
3. Magnet catch-rear	1
4. Magnet catch-front	1
5. Duplex-unit support	1
6. Rail joint	1
7. Screw M4 x 12	6
8. Screw M4 x 6	8
9. Screw M3 x 14	4
10. Rail	1
11. Stapler unit	1
12. Staple cartridge	1
13. Pad	3

NOTE: Make sure that you retain the pads. The pads are white and made of Styrofoam.

OPTIONAL UNIT

Adjusting the Height

- 1. Check the type of the optional paper tray:
 - If the optional two-tray paper feed unit or the optional LCT is installed, go to step 2.
 - If either of them is not installed, go to "Main Body."
- 2. Tape the pads [A] to the right-hand side of the machine.
- 3. Lay the machine on its right-hand side.
- 4. Remove the adjuster plates [B] ($\hat{\mathscr{F}} \times 2$).
- 5. Change the height [C].
- 6. Reinstall the adjuster plates [D].
- 7. Take out the machine from the box and stand it up.
- 8. Check that the height is correct, and remove the pads.

OPTIONAL UNIT

Main Body

1. Remove all tape and padding.

- 2. Remove the screw cover [A].
- 3. Install the rail joint [B] ($\hat{\mathscr{F}} \times 4$).
- 4. Reinstall the screw cover.

5. Install the regular tray [C] ($\mathscr{F} \times 4$).

OPTIONAL UNIT

- Install the magnet catches [A][B]
 (𝔅 x 2 for each).
- 7. Install the duplex-unit support [C] ($\hat{\not}$ x 3).

8. Remove the support on the left side [D] ($\hat{\beta}^{*}$ x 2).

- 9. Set the rail [E] through the rail holder [F].
- 10. Install the rail holder (with the rail) to the printer ($\hat{\mathscr{F}}^{3} \ge 2$).

12. Install the stapler unit [A].

- 13. Turn the knob [B] clockwise until the staple-cartridge holder [C] reaches the front-most position.
- 14. Install the staple cartridge [D] firmly to the staple-cartridge holder.

15. Turn on the main switch and check the operation.

G106I941.WMF

1.4.4 OPTIONAL PUNCH UNIT

Accessory Check

Check the quantity and condition of the accessories.

G106I944.WMF

Installation Procedure

1. Remove the front lower cover [A] ($\hat{\beta}^2 \times 2$).

G106I945.WMF

Installation

OPTIONAL UNIT

- 2. Remove the joint guard [A] ($\hat{\mathscr{F}} \times 2$).
- 3. Open the front door [B].
- 4. Release the stopper and remove the knob [C].
- 5. Remove the front cover [D] ($\beta^2 \times 4$).
- Remove the rear cover [E] (x 3).
 NOTE: Do not damage the Mylar when you remove the screw.
- 7. Remove the right top cover with the paper entrance cover [G] ($\hat{\mathscr{F}} \times 4$).

OPTIONAL UNIT

8. Remove the right top cover [A] from the paper entrance cover [B].

Installation

9. Install the punch unit [C] (x 2, 1 screw with the base [D])

10. Install the right top cover [E] ($\hat{\mathscr{F}} \times 2$).

G106I949.WMF

- **NOTE:** Check that the side guide and the front cover correctly join with each other [E].
- 14. Attach the decal [F].
- 15. Turn on the main switch and check the punch operation.

2. PREVENTIVE MAINTENANCE

2.1 USER MAINTENANCE

Maintenance Kit

The table shows the maintenance kits for the user.

	Kit	Component	Expected Yield (Prints)
	A	Color PCU (3 PCUs for CMY)	50k
_	В	Color Development Unit (3 units for CMY)	100k
E	С	Fusing Unit (without Oil Supply Unit)	100k
	D	Black Development Unit and Dust Filter	100k
	E	Waste Toner Bottle	50k
	F	Black PCU	50k
	G	Oil Supply Unit	30k

NOTE: The yield is calculated for these conditions: A4 (LT) LEF, 5% image coverage ratio, 5 prints per job.

PM Alert Display

Model J-P3 can show a PM Alert (an error message) when a unit or component must be replaced. The table shows the SPs related to PM Alerts.

Service Program	Function
Meter Charge > Menu (SP5-930-003)	Enables or disables the PM Alert for the PCUs, development units, and fusing unit.
Alert Display > Waste Oil: Full (SP7-905- 010)	Sets the number of revolutions the development drive motor-K can make after "Waste Oil Bottle is Almost Full", is shown.
Alert Display > Oil: Alert: Page (SP7-905- 014)	Sets the number of sheets the printer can output after the fusing oil gets to the near end condition.

Model J-P3 stops operation if the user does not replace the waste toner bottle or the oil supply unit when the machine tells the user to do this.

New Unit Detection

When the user replaces a unit or component that is a part of a maintenance kit, Model J-P3 automatically detects the unit or component. The related counter(s) (one or some of SP7-803-001 to 049) will be set to zero.

USER MAINTENANCE

PM Table

Symbol key: C: Clean, R: Replace, L: Lubricate, I: Inspect

Main Unit

3. REPLACEMENT AND ADJUSTMENT

Turn off the main power switch and unplug the printer before removing any part of the printer.

3.1 MODEL J-P3 AND MODEL J-P2

While reading this chapter, keep Model J-P2 Service Manual at hand. This chapter frequently refers to Model J-P2.

Model J-P3 and Model J-P2 have common features and components. Model J-P2 Service Manual gives you the information on these features and components. This chapter illustrates the features and components that are supported only by Model J-P3.

Symbols in this chapter:

- ☞: See Model J-P3 Service Manual
- ☞ [P2]: See Model J-P2 Service Manual
- ⊑[⊥]: Connector
- \bigcirc : Clip ring
- C: E ring

3.2 SPECIAL TOOLS

52039501	Silicon Grease G-501	1

Replacemen Adjustment

3.3 LASER OPTICS

Turn off the main power switch and unplug the printer before beginning any of the procedures in this section. Laser beams can cause serious eye injury.

3.3.1 CAUTION DECAL LOCATIONS

Caution decals are attached as shown below.

G106R928.WMF

Be sure to turn off the main power switch and disconnect the power plug from the power outlet before beginning any disassembly or adjustment of the laser unit. This printer uses a class IIIb laser beam with a wavelength of 655 nm and an output of 7 mW. The laser can cause serious eye injury.

3.3.2 LASER OPTICS HOUSING UNIT

- **CAUTION:** 1) Before installing a new laser optics housing unit, remove the sponge padding and the tag from the new unit.
 - 2) Do not remove the polygon mirror from its base. If you do this, the lubricant on the shaft can leak out after you reassemble the printer.

Steps 1 through 4 refer to the procedure for a newly supplied unit that replaces the old one.

- Top cover of the laser optics housing unit [A] (^A x 4)
- 2. Sponge padding [B]
- 3. Tag [C]
- 4. Reinstall the top cover.

eplacemer djustmen

- Rear cover, upper rear cover (☞ [P2] 3.3.1)
- 6. Paper exit tray ([P2] 3.3.2)
- 7. Right cover, upper right cover (☞ [P2] 3.3.3)
- 8. Operation panel ([P2] 3.3.6)
- 9. Black PCU cooling fan [D] (≝^{IJ} x 1, ⅔ x 1)

- 10. Securing screws for the toner supply unit [A] (ℰ x 4)
- 11. Securing screws for the laser optics housing unit [B] (ℰ x 2)

G106R903.WMF

- 12. Lift the toner supply unit [C] ①, and lower it ②. NOTE: The pins on the front side
 - [D] and the rear side hold the toner supply unit.

G106R908.WMF

- 18. Duct [A]
- 19. Securing screws for the laser optics housing unit [B] ($\hat{\mathscr{F}} \times 2$) **NOTE:** When reassembling, attach the ground cable [C].
- 20. Put a sheet of paper [D] between the laser optic housing unit and the machine rear frame.

NOTE: This ensures that the cables are not caught by the brackets when you lift the laser optics housing unit.

- 21. Hold the unit with both hands and lift it up slowly, making sure that the flat cables from the laser diode board are not caught by the brackets.NOTE: If you roughly remove the unit, the cables can be caught by the brackets and the laser diode board may be damaged.
- 22. Do SP5-993-002 (Line Adjustment > Execute) or Auto Adjustment in the User Tools (Maintenance > Color Regist. > Auto Adjust. > Now).

3.3.3 POLYGON MIRROR MOTOR

- 1. Laser optics housing unit (☞ 3.3.2)
- 2. Top cover [A] (🖗 x 4)
- 3. Flat cable on the polygonmirror-motor drive-board [B]
- 4. Eight connectors [C] on the four LD boards

teplacem Adjustm

 Upper cover [D] (I × 9, ≱ x 6) NOTE: Two of the nine connectors are on the opposite side of the upper cover.

- 6. Air-current rectifier [E] (²/₈ x 3)
- 7. Polygon mirror motor [F] (🖗 x 4)

3.3.4 POLYGON MIRROR MOTOR DRIVE BOARD

G106R937.WMF

3.4 PAPER FEED

3.4.1 REGISTRATION SENSOR AND RELAY SENSORS

- 1. Right door unit ([P2] 3.6.4)
- Lift the registration guide [A] (ℰ x 2)
 - **NOTE:** It is not necessary to fully lift the registration guide. You can get access to the screw of the registration sensor bracket when you lift the guide half the distance.
- Registration sensor bracket [B] (²/_€ x 2)
- Registration sensor [C]
 (
 [∂] x 1, □ x 1)
 [⊥] x 1)
 [⊥]
 - NOTE: When you reassemble, make sure that the connector does not come off.

G106R909.WMF

- Relay sensor bracket [D] (X 1) NOTE: Remove the registration sensor bracket first. You have easier access to the relay sensor bracket.
- 6. Relay sensor [E] (⊑^{IJ} x 1)

G106R938.WMF

3.4.2 BY-PASS FEED CLUTCH

- 1. Right door unit (([P2] 3.6.4)
- By-pass tray cover [A]
 (𝔅³ x 1, 1 hook)
- Upper guide plate [B]

 (𝔅 x 4)
 NOTE: It is not necessary to remove the connectors on the bottom side of the upper guide plate.
- 4. Support plate [C] (C x 2)
- 5. Relay gear [D]
- 6. By-pass feed clutch [E] (^[] x 1)

3.4.3 PAPER FEED MOTOR

- 1. Rear cover ([P2] 3.3.1)
- 2. Swing out the high voltage supply unit. (☞ [P2] 3.10.2)
- - NOTE: The connector is CN604 on the driver board [B].

3.5 TRANSFER AND PAPER TRANSPORT UNIT

3.5.1 TRANSFER UNIT

NOTE: When removing or installing the transfer unit, grasp the grip on the front frame and the center of the rear frame. Do not touch the transfer belt [A]. Do not damage the entrance Mylar [B].

- 1. Turn the release lever counterclockwise ([P2] 3.5).
- 2. Pull out the transfer unit [C] until the entire unit is visible ($\hat{\mathscr{F}} \times 2$).
- 3. Grasp the handle on the front frame and the center of the rear frame, and lift the unit to remove it.

After replacing the transfer unit:

- Reset the maintenance counter, SP7-804-017
- Remove all the PCUs.
- Do the transfer belt idling with SP5-804-066 for 1 minute.
- Install the PCUs.
- Perform forced line position adjustment (SP5-993-002 or Menu > Maintenance > Color Regist. > Auto Adjust).
- Print the 1-dot grid pattern on A3/11" x 17" paper and check the color shift level (
 (P2] 4.4.3).

3.5.2 TRANSFER BELT CLEANING UNIT

CAUTION: Push the lever [A] and hold it there while you remove or install the transfer belt cleaning unit. The blade [B] can cause damage to the transfer belt if you do not continue to push the lever.

While pushing the lever [A], pull out the transfer belt cleaning unit ($\hat{\beta} \times 1$).

Adjustment and Setting

After replacing the transfer belt cleaning unit, reset the maintenance counter (SP7-804-018).

After replacing the transfer belt cleaning unit, do the forced line position adjustment (SP5-993-002 or Menu > Maintenance > Color Regist. > Auto Adjust).

3.5.3 CLEANING BLADE AND CLEANING ROLLER

- Transfer belt cleaning unit (
 - 3.5.2)
- 2. Cleaning blade [A] (F x 2)

G106R950.WMF

- 7. Bushing [E]
- 8. Cleaning brush [F]

G106R912.WMF

[E]

Setting

After replacing the cleaning blade, do the forced line position adjustment (SP5-993-002 or Menu > Maintenance > Color Regist. > Auto Adjust).

3.5.4 TRANSFER UNIT DRIVE MOTOR

1. Pull out the transfer unit (3.5.1). [B] 2. Transfer belt cleaning unit (3.5.2) 3. Release lever [A] ($\hat{\beta}^2 \times 1$) 4. Front cover [B] (🖗 x 3) [A] 9) 6)} G106R943.WMF 5. Front plate [C] (ℰ x 5, 🗊 x 1, [F] Timing belt x 1) 6. Transfer unit drive motor [D] (∦ x 2, ⊑ x 1) [C] [E] 6)) [D]

Reassembling

Before you attach the screw at the left end [E], check that the timing belt [F] is sufficiently tight. The screw [E] adjusts the position of the roller [G]. This roller pushes the timing belt [H], to make sure that the belt tightly engages with the drive motor [I] and the drive gear [J]. [E]/

G106R944.WMF

3-14

3.6 ID SENSORS

- 1. Transfer unit (3.5.1).
- 2. Fusing unit (r [P2] 3.9.1)
- 3. Black PCU ([P2] 3.5)
- 4. ID sensor bracket [A] (ℰ x 2, 🗊 x 1)

Reassembling

Check that the ID sensor bracket receives the drum-positioning plate correctly.

3.7 FUSING

- 1. Make sure that the fusing unit is sufficiently cool before you touch it. The fusing unit can be very hot.
- 2. Do not spill the silicone oil. Spilled silicone oil makes the floor slippery and can cause serious accidents.
- 3. Do not tilt the fusing unit. The oil supply unit [A] can fall off the fusing unit after the grip [B] is released from the oil supply unit.

3.7.1 CLEANING UNIT

- 1. Upper cover ([P2] 3.9.2)
- 2. Spacer [A] (🖗 x 1)
- 3. Front handle guide [B] (²/_ℓ x 1)
- 4. Rear handle guides [C] ($\mathscr{F} \times 2$)
- 5. Handle [D] (Spring x 1)

6. Cleaning unit [E] (²/₂ x 2)

3.7.2 PRESSURE ROLLER

- 2. Lower paper guide plate ([P2] 3.9.8)
- 3. Drive gear holder [A] ($\hat{\mathscr{F}} \times 1$)
- 4. Drive gear [B] (C x 1)
- 5. Lower right cover ([P2] 3.9.9)
- 6. Connector bracket [C] with the connector ($\hat{\mathscr{F}} \times 1$)
- 7. Pads [D]
- 8. Release the fuse base [E] from the frame ($\hat{\mathscr{F}} \times 1$). **NOTE:** It is not necessary to remove the cables.
- 9. Thermistor (
 [P2] 3.9.9)

 NOTE: To prevent damage to the thermistor, remove the thermistor before you remove the pressure roller unit.
- 10. Pressure roller unit [F] (x 4)
 NOTE: When you reassemble the machine, make sure that the pressure roller unit does not cause damage to the cables.

- 12. Pressure roller holder [B] ($\hat{\mathscr{F}} \ge 1$)
- 13. Pressure roller [C] (C ring x 1, 2 bushings)

FUSING

3.7.3 FUSING UNIT FAN

When reinstalling, make sure that the fan faces to the correct direction. The arrow on the fan [D] and the arrow on the duct [D] must face to the same direction.

- 1. Rear cover ([P2] 3.3.1)
- 2. Left cover, rear left cover (☞ [P2] 3.3.5)
- 3. Fusing fan duct [A] (斧 x 2, ⊑⊯ x 1)

- 4. Release the hooks and remove the upper cover [B].
- 5. Fusing fan [C]

G106R947.WMF

3.8 ELECTRICAL COMPONENTS

3.8.1 CONTROLLER AND BCU

- **NOTE:** 1) Before replacing the BCU, the controller, or the NVRAM, print out the SMC reports ("SP Mode Data" and "Logging Data").

G106R918.WMF

- 1. Controller [A] (🖗 x 4)
- 2. Option bracket [B] ($\hat{\mathscr{F}} \times 4$)
- 3. Rear cover [C] ([P2] 3.3.1)

- 4. Connector cover [A] (🕅 x 1)
- 5. Four flat cables [B]
- 6. Connector [C]
- 7. Cover bracket [D] ($\hat{P} \times 5$)

8. BCU [E] (All ⊑[™]'s, ∦ x 8)

- **CAUTION:** 1) When handling NVRAMs, keep them away from any objects that can cause static electricity. The data in NVRAMs may be corrupted by static electricity.
 - 2) Make sure the NVRAM is correctly installed on the board. A half-disk [F] is engraved on one side of the NVRAM, while a guide mark [G] is on one side of the NVRAM slot. Install the NVRAM so that the halfdisk and the guide mark are on the same side.
 - 3) When replacing the BCU, make sure that the DIP-switch settings on the old board and on the new board are the same (5.8).

3.8.2 NVRAM REPLACEMENT PROCEDURE

Make sure that you have the SMC report (factory settings) that comes with the printer before beginning the following procedure.

NVRAM on the BCU

For this procedure, you must know the device number and the destination code (step 10).

- 1. Start the SP mode.
- 2. Use SP5-990 to print out the SMC reports ("SP Mode Data" and "Logging Data") if possible.
- 3. Use SP5-824 to upload the NVRAM data if possible.
- 4. Turn off the main power switch and unplug the power cord.
- 5. Replace the NVRAM on the BCU and reassemble the machine.
- 6. Plug in the power cord.
- 7. Turn on the main power switch.
- 8. Start the SP mode.
- 9. Use SP5-825 to download the NVRAM data if possible.
- Contact your supervisor to enter the machine's device number.
 NOTE: SC999 or "Fusing Unit Setting Error" may be displayed until the machine's device number and destination code are programmed properly.
- 11. Turn the main power switch off and on.
- 12. If the NVRAM data is downloaded (step 9), the following steps are not required.
- 13. Start the SP mode.
- 14. Use SP5-998-1 to reset the engine settings.
- 15. Reset the meter charge settings (SP5-930-001 to 005).
- 16. Enter the SP mode changes previously made at the factory and the field.
- 17. Replace all maintenance kits with new ones.

NVRAM on the Controller

- 1. Start the SP mode.
- 2. Use SP5-990 to print out the SMC reports ("SP Mode Data" and "Logging Data") if possible.
- 3. Use SP5-824 to upload the NVRAM data if possible.
- 4. Turn off the main power switch and unplug the power cord.
- 5. Replace the NVRAM on the controller and reassemble the machine.
- 6. Plug in the power cord.
- 7. Turn on the main power switch.
- 8. Start the SP mode.
- 9. Use SP5-825 to download the NVRAM data if possible. If it can be done, the following steps are not required.
- 10. Use Memory Clear (SP5-801) to reset this data:
 - SCS (SP5-801-003)
 - PRT (SP5-801-008)
 - NCS (SP5-801-011)
- 11. Do Counter Clear (SP7-808).
- 12. Make these contract-related settings:
 - Counter Method (SP5-045)
 - Double Count (SP5-104)
 - Telephone Number Setting > Fax Telephone Number (SP5-812-002) if the meter charge mode (SP5-930-001) is "ON" (enabled)
- 13. Enter the SP mode changes previously made at the factory and the field.

NVRAMs on the BCU and Controller

For this procedure, you must know the device number and the destination code (step 10).

- 1. Start the SP mode.
- 2. Use SP5-990 to print out the SMC reports ("SP Mode Data" and "Logging Data") if possible.
- 3. Use SP5-824 to upload the NVRAM data if possible.
- 4. Turn off the main power switch and unplug the power cord.
- 5. Replace the NVRAMs on the BCU and the controller, and reassemble the machine.
- 6. Plug in the power cord.
- 7. Turn on the main power switch.
- 8. Start the SP mode.
- 9. Use SP5-825 to download the NVRAM data if possible.
- Contact your supervisor to enter the machine's device number.
 NOTE: SC999 or "Fusing Unit Setting Error" may be displayed until the machine's device number and destination code is programmed properly.
- 11. Turn the main power switch off and on.
- 12. If the NVRAM data is downloaded (step 9), the following steps are not required.
- 13. Start the SP mode.
- 14. Use SP5-998-001 to reset the engine settings.
- 15. Use Memory Clear (SP5-801) to reset this data:
 - SCS (SP5-801-003)
 - PRT (SP5-801-008)
 - NCS (SP5-801-011)
- 16. Do Counter Clear (SP7-808).
- 17. Reset the meter charge settings (SP5-930-001 to 005).
- 18. Make these contract-related settings:
 - Counter Method (SP5-045)
 - Double Count (SP5-104)
 - Telephone Number Setting > Fax Telephone Number (SP5-812-002)
- 19. Enter the SP mode changes previously made at the factory and the field.
- 20. Replace all maintenance kits with new ones.

3.8.3 HIGH VOLTAGE SUPPLY BOARD

- 1. Rear cover ([P2] 3.3.1)
- High voltage supply board [A] (All'^[], ⁽∕^P x 6)

Rep

G106R935.WMF

G106R911.WMF

3.8.4 CIRCUIT BREAKER AND PSU FAN

- 1. PSU ([P2] 3.10.6)
- Circuit breaker bracket [A] (E[™] x 2, ^A x 2)
- 3. Circuit breaker [B] (⊑^{IJ} x 4)
- PSU fan bracket [C] (E^J x 1, ² x 2)
- 5. PSU fan [D] (🕅 x 2)

Reassembling

Check that the arrows on the fan and the bracket point in the same direction.

3.8.5 CHOKE COIL

- Left cover, rear left cover (
 (P2] 3.3.5)
- 2. Tray 2
- 3. Choke coil bracket [A] ($\hat{\mathscr{F}} \times 2$)
- 4. Choke coil [B] (^β x 2, [™] x 1) NOTE: The connector is on the PSU.

3.8.6 DEVELOPMENT DRIVE MOTOR-K

- 1. Fusing fan duct (🖝 3.7.3)
- Development clutch securing plate (☞ [P2] 3.11.3)
- 3. Solenoid cover [A] (🖗 x 2)

G106R948.WMF

4. Development drive motor–K [B] (with the fusing clutch [C]) (x 4, w x 2)
 NOTE: When reassembling, remove the bushing [D] and install the development drive motor–K (with the fusing clutch) first. After this, install the bushing.

3.8.7 WASTE TONER VIBRATOR

- Move out the controller box (
 (P2] 3.10.1)
 NOTE: This step is necessary to remove the connector.
- 2. Transfer unit (3.5.1)
- Waste toner vibrator [A] (²/₈ x 2, ⊑¹/₂ x 1)

4. TROUBLESHOOTING

4.1 MODEL J-P3 AND MODEL J-P2

While reading this chapter, keep Model J-P2 Service Manual at hand. This chapter frequently refers to Model J-P2.

Model J-P3 and Model J-P2 have common features and components. Model J-P2 Service Manual gives you the information on these features and components. This chapter illustrates the features and components that are supported only by Model J-P3.

4.2 PROCESS CONTROL ERROR CONDITIONS

4.2.1 DEVELOPER INITIALIZATION RESULT

SP-3-005-006	(TD Initialization > Result)
--------------	------------------------------

No.	Result	Description	Possible Cause	Action
	Not performed	Developer initialization is not performed.	When initializing only the black developer, the initialization result becomes "1000".	When done in SP mode, do the developer initialization again. If the result is the same, reinstall the engine main firmware.
0				 When done at unit replacement: Check if a new unit is installed Check if the unit detection system is working Check if SP2-223-001 (auto initialization at unit replacement) is enabled.
1	Successfully completed	Developer initialization is successfully completed.	-	-
2	Forced termination	Developer initialization was forcibly terminated.	A cover was opened or the main switch was turned off during the initialization.	When done in SP mode, do the developer initialization again. If the result is the same, reinstall the engine main firmware. When done at unit replacement, turn the main

Troubleshooting

No.	Result	Description	Possible Cause	Action	
3	Vt error	Vt is less than 0.78V and "Reset development unit" is displayed.	 Check if the drum stay is properly set and secured. Check if the development unit is properly set. If the problem is still the same, check the following: Poor connection of connectors TD sensor defective Harness damage BCU board failure Firmware problem (engine main or MUSIC) 		
8	Toner supply error	During toner fill-up mode, Vt does not reach the target value.	 Check if the toner cart Check if the amount of is insufficient. Check if toner is coagu cartridge well.) Check if the connector properly set, and/or re Toner attraction pump Check if the toner sup damaged. 	ridge is properly set. f toner left in the toner cartridge ulated. (If yes, shake the toner rs of the following parts are place the parts. / Air Pump / Valves ply tube is bent, caught, or	
9	Failure	Vt cannot be adjusted within 3.0 \pm 0.1V. SC370 - 373 will be displayed. Turning the main switch off and on clears this SC code.	 Shielding tape is not removed. Development unit is not firmly installed, causing poor connection of the TD sensor connector. TD sensor defective. 	 Remove the shielding tape to supply developer to the unit. Reinstall the development unit. Replace the development unit 	

NOTE: When the machine detects new development units, it automatically starts developer initialization. If an error other than Error 8 occurs, developer initialization is automatically resumed by opening and closing the front door or turning the main switch off and on.

4.2.2 PROCESS CONTROL SELF-CHECK RESULT

See Model J-P2 Service Manual.

4.2.3 LINE POSITION ADJUSTMENT RESULT

No.	Result	Description	Note
01	Successfully completed	Data sampling was correctly done and line position adjustment was successfully completed.	
02	Out of adjustment range (over ±1.4 mm)	The calculated result for line position correction is greater than ± 1.4 mm.	
03	Calculation Error	Distance between the lines is greater than ± 1.4 mm.	
04	Sampling Error	Data sampling cannot be done properly.	
05	Descending slope error	The ascending or descending slope of the ID sensor signal wave is out of specification.	(See Note)
06	Ascending slope error		(See Note)
07	Pattern lines mismatch (less than 64 lines)	The detected number of pattern lines is less than 64.	(See Note)
08	Sampling time-out	Data sampling cannot be done within the allocated time.	
09	Sampling start error	The start mark cannot be detected within the allocated time.	
10	Pattern length mismatch	The pattern length is shorter or longer than specified.	(See Note)
11	Pattern lines mismatch (over 64 lines)	The detected number of pattern lines is over 64.	
12	Magnification mismatch	The calculated magnification value does not match any data in the laser power frequency adjustment data table.	
13	Toner condition	The machine is in the toner near-end or toner end condition.	
17	Not executed	The machine is not ready to do the line position adjustment manually from the user menu.	
18	Potential control error	Line position adjustment cannot be done due to failed potential control.	

Note: Concerning the error codes (05, 06, 07 or 10) which stop sampling data when either the front, center, or rear ID sensor detect an error, the machine may display the error code for both ID sensors in some cases.

For the possible causes of the errors in the line position adjustment, see Model J-P2 Service Manual.

Troubleshooting

SC Code Classification

Class 1	Section	SC Code	Detailed section
177	Soonning	100 -	Scanner
1~~	Scarring	190 -	Unique for a specific model

SC 374 SC 375 SC 376 SC 377	Vt error [K] Vt error [Y] Vt error [C] Vt error [M]	During the image development, Vt value is less than 0.78V.	 Poor connection (TD sensor outputs is less than 0.5V.) Defective TD sensor 		 Turn the main switch off and on. Reset the related color development unit. Replace the related color development unit. 	
SC 386 SC 387	Development gamma error K Development	Any of the following conditions happens three consecutive times:	 Unsuitable toner density Toner supply 		 Turn the main switch off and on . Check the process control self-check result (SP3-975). If the result is not "1" fix the problem according to the 	
SC 388 SC 389	Development gamma error C Development gamma error M	 When the development gamma is out of the following range: 0.3 ≤ γ ≤ 6.0 When Vk is out of the following range: -150V ≤ Vk ≤ 150V Development gamma 	 Laser exposure problem Image transfer problem 		 table in section 4.1.2. Print a full color image by disabling SC detection (SP5-809-001) and check if the image quality is OK. If the image quality is not OK, fix the problem. Then, enable the SC detection again. 	
SC 391-01	Charge AC: output error 391-01: K 391-02: Y 391-03: M 391-04: C	calculation error The high voltage supply board sends the feedback signal (CN228-2 to 5; MCYK). The BCU monitors these feedback signals every 8 ms. If the average of the sampled data is not within the control target 20 consecutive times, this SC code is generated.	 Power pack disconnected Charge receptacle or terminal Defective PCU bias input terminal Incorrect power pack B/C output Damaged cable Defective BCU 		 Turn the main switch off and on. Check the connector. Check the PCU charge voltage input (the spring/conducting shaft) or replace the PCU. Replace the power pack B/C. Replace the cable. Replace the BCU. 	
SC 440- 001	Drum motor error 440-001: Black 440-002: Color	No drum gear position sensor signal is detected within 0.7 second (185 mm/s), 0.8 second (162 mm/s), 1.0 second (125 mm/s), or 2.0 seconds (62.5 mm/s).	 Defective PCU Defective drum motor Defective drum gear position sensor 		 Turn the main switch off and on. Check and/or replace the PCU. Check and/or replace the sensor. 	

SC No.	ltem	Definition	Possible Cause	Related SCs	Troubleshooting Procedure	Туре
SC 480	Waste toner bottle full	The waste toner bottle does not push the waste toner sensor feeler.	 The waste toner bottle is full. The waste toner bottle is not correctly set. 		 Replace the waste toner bottle. Check that the waste toner bottle is correctly lifted and that the bottle pushes the waste toner sensor feeler. Close the front cover. Wait 10 seconds. Turn the main switch off and on. 	
SC 481	Waste toner vibrator error	The waste toner vibrator does not operate.	Loose connectionDefective motor		 Turn the main switch off and on. Check the connection. Replace the motor. 	
SC 543	Heating roller fusing lamp overheat	The detected fusing temperature stays at 220°C or more for five seconds.	Defective PSUDefective BCU		 Replace the PSU. Replace the BCU. 	A
SC 555	Pressure roller fusing lamp consecutive full power	When the fusing unit is not running in the Ready condition, the pressure roller fusing lamp keeps ON with full power for 150 seconds continuously (North America) or 190 seconds continuously (Europe).	 Pressure roller thermistor out of position 		1. Replace the fusing unit.	A

SC TABLE

SC No.	ltem	Definition	Possible Cause	Related SCs	Troubleshooting Procedure	Туре
SC 621 SC 622	Two-tray finisher/booklet finisher communication error Bank communication error	 While the BCU communicates with an optional unit, an SC code is displayed if one of following conditions occurs. 1. The BCU receives a signal which is generated by the peripherals only just after the main switch is turned 	 Cable problems BCU problems PSU problems in the machine Main board problems in the peripherals 		 Turn the main switch off and on. Check if the cables of peripherals are properly connected. Replace the PSU if no power is supplied to peripherals. Replace the BCU or main board of peripherals. 	D
SC 623	Duplex unit communication error	 on. 2. When the BCU does not receive an OK signal from a peripheral 100 ms after sending a command to it. The BCU resends the command. The BCU does not receive an OK signal after sending the command 3 times. 	 Cable problems BCU problems PSU problems in the machine Duplex control board problem 		 Turn the main switch off and on. Check if the cable of the duplex inverter unit is properly connected. Replace the PSU if no power is supplied to the peripherals. Replace the duplex control board in the inverter unit. 	D
SC 740	Booklet finisher transport motor error	 The folder home position sensor does not turn off within 2 seconds after the folder rollers start to move. The folder home position sensor does not turn on within 2 seconds after the folder rollers start transporting the paper to the booklet tray. 	 Defective transport motor Loose connection of the transport motor Defective folder home position sensor Loose connection of the holder home position sensor 		 Turn the main switch off and on. Check the connection of the transport motor. Check the connection of the folder home position sensor. Replace the transport motor. 	В

SC No.	ltem	Definition	Possible Cause	Related SCs	Troubleshooting Procedure	Туре
SC 741	Booklet finisher paddle motor error	 The paddle home position sensor does not turn off within 2 seconds after the paddles start to move. The paddle home position sensor does not turn on within 2 seconds after the paddles start to operate. The stack-tray upper roller home position sensor does not turn off within 2 seconds after the paddle motor starts to lower the roller. The stack-tray upper-roller home-position sensor does not turn off within 2 seconds after the paddle motor starts to lower the roller. The stack-tray upper-roller home-position sensor does not turn on with in 2 seconds after the paddle motor starts to lower the roller. 	 Defective paddle motor Loose connection of the paddle motor Defective paddle home position sensor Loose connection of the paddle home position sensor Defective stack-tray upper-roller home-position sensor Loose connection of the stack-tray upper-roller home-position sensor 		 Turn the main switch off and on. Check that the connection of the paddle motor. Check the connection of the paddle home position sensor. Check the connection of the stack-tray upper-roller home-position sensor. Replace the paddle motor. 	В
SC 742	Booklet finisher stapler slide motor error	 The stapler home position sensor does not turn off within 1 second after this same sensor turns on. The stapler home position sensor does not turn on within 1 second when the stapler is coming back to its home position. 	 Defective stapler slide motor Loose connection of the stapler slide motor Defective stapler home position sensor Loose connection of the stapler home position sensor 		 Turn the main switch off and on. Check the connection of the stapler slide motor. Check the connection of the stapler home position sensor. Replace the stapler home position sensor. Replace the stapler slide motor. 	В

4.4 TROUBLESHOOTING GUIDE

4.4.1 IMAGE QUALITY

The table lists the troubleshooting procedures for some typical problems. For more troubleshooting procedures, see Model J-P2 Service Manual.

Subject	Symptom	Cause	Action
Symptoms related to c	olor		
Color Shift	Color shift level is out of the adjustment standard.	The adjustment standard on this product is $150 \ \mu m$ at the maximum. The color shift level may change depending on a type of paper used.	Check the level of the color shifts reported from user and follow the troubleshooting procedure described in section 4- if necessary.
Color missing	Color(s) is missing on the outputs.	The position of 3rd mirror moves due to the rough transportation of service part; and then, becomes out of position.	 When replacing the laser optic housing unit due to any reason, make a color demo page in the UP mode. If color(s) is missing, open the unit and reposition the mirror(s).
		 Flat cable(s) is not properly connected to the BCU board. 	Reconnect the flat cable(s) firmly.

TROUBLESHOOTING GUIDE

4.4.2 COLOR SHIFT

20 February 2004

For general information and some typical symptoms, see Model J-P2 Service Manual.

TROUBLESHOOTING GUIDE

G106T902.WMF

TROUBLESHOOTING GUIDE

Adjustment Standard

The amount of color shift must be 150 μ m or less. Some service programs (motor speed, registration, and magnification) can decrease the size of color shifts. But, there is a limit.

Preparation

The Line Adjustment (SP5-993-002) cannot correct the color shift if the gap between the color lines is 1.4 mm or greater. In this case, restore the factory settings in the following SPs and do the Line Adjustment. Then, follow the troubleshooting procedure if required.

- Main-scan Registration SP2-909-001 to 004
- Sub-scan Registration SP2-916-001 to 010
- Main-scan Magnification SP2-103-055 to 059

When you see a color shift, try the following procedure before adjusting a component or service program.

- 1. Print out the SMC sheets (SP5-990-002).
- Do the Line Adjustment (SP5-993-002 or Menu > Maintenance > Color Regist. > Auto Adjust).
 NOTE: Make sure that the result (SP5-993-007) is "010101." If not, see Model J-P2 Service Manual, section 4.1.3.
- 3. Print a 1-dot grid pattern using A3/11" x 17" paper. Refer to the following table for the detailed SP mode settings.

Mode	SP5-997 (Test Pattern) Setting				
	Tray	Pattern	Color mode	Pesolution	Paper size
	selection	Falleni		Resolution	(By-pass)
Normal, color, 600 dpi	2	05	Full Color	600x600	—
Normal, color, 1200 dpi	2	05	Full Color	1200x1200	—
Thick paper	0	05	Full Color	1200x1200	A3 / 11x17

NOTE: When making prints on thick paper from the by-pass tray, the type of paper should be selected in the User Program mode. Any adjustment needs to be done by using the type of paper that the customer normally uses.

- 4. Check the tendency of color shift in the grid pattern printed in step 3. Sometimes, a magnification scope must be used to measure the amount of color shift between colors.
- 5. Take the required action explained in each section depending on the type of color shift.
- 6. Do the 'Auto Adjust' in the User Program mode after the adjustment is done in step 5, and check the result.
- 7. Repeat steps 3 to 6 until the color shift is acceptable.

For more on troubleshooting, see Model J-P2 Service Manual.

4.4.3 BLACK OVER PRINT

Black Over Print prevents unexpected white lines from appearing when black letters or lines are printed with color background. You can enable or disable this feature from the printer driver (default: enabled).

Black Over Print has these bad side effects:

- Crispness may deteriorate because the black toner spreads out.
- More toner is consumed.
- The background color may be seen through black letters or lines.

Black Over Print Enabled

Black lines and color background are printed as follows:

- 1. The color toner (for example, magenta [B] and yellow [A] toner) is transferred on the paper [C].
- 2. The black toner [D] is transferred on the color toner.

Even if the line position of the black toner is not correct, an unexpected white line does not appear.

Black Over Print Disabled

Black lines and color background are printed as follows:

- The color toner (for example, magenta [B] and yellow [A] toner) is transferred on the paper [C]. Some space [D] is left blank for the black toner.
- 2. The black toner [E] is transferred in the blank space.

If the line position of the black toner is not correct, an unexpected white line [F] appears.

4.5 BLOWN FUSE CONDITIONS

Main PSU

The table lists the fuses on the main power supply unit.

Fuso	Rating		Symptom when turning on the main
T USE	115 V	220 - 240 V	switch
FU1	15A/125V	—	No response (No power is supplied to
CB1	—	8A/250V	the electrical components.)
FU2	10A/125V	5 A/250V	No response (No DC power is supplied to the electrical components.)
FU91	10 A/250 V	10 A/250V	The 24V DC power is not supplied. The message, "Close Front Cover," is displayed.

Sub PSU

The table lists the fuses on the sub power supply unit.

Fuso	Rating		Symptom when turning on the main
1 436	115V	220–240V	switch
F1	4A/250V	3.15A/250V	The two-tray finisher or booklet finisher is not detected. "Close Duplex Unit Cover" is shown.
F2	8A/250V	8A/250V	The two-tray finisher or booklet finisher is not detected. "Close Duplex Unit Cover" is shown.

BCU

The table lists the fuses on the sub power supply unit.

Fuse	Rating	Symptom when turning on the main switch
FU1	3A/32V	No response
FU2	1A/24V	SC 680 (BCU/ MUSIC communication error: The power is not supplied to the ID chips on the toner bottles, so the toner bottles are not recognized.)
FU3	4A/24V	When you turn on the main power switch, the operation panel displays messages as usual but the characters are not clear. After this, the messages and LEDs turn off.

4.6 LEDS (BCU)

	Status			
	Blinking	Stays OFF or ON		
LED1 (Yellow)	The DSP functions correctly.	The DSP does not function correctly.		
LED2 (Green)	The MUSIC CPU functions correctly.	The MUSIC CPU does not function properly.		
LED3 (Red)	The main CPU functions correctly.	The main CPU does not function correctly.		

5. SERVICE TABLES

5.1 SERVICE PROGRAM MODE

Before you start the service program mode, make sure that the printer is not processing data. The Data In LED lights or blinks when the printer is processing data.

5.1.1 HANDLING SERVICE PROGRAM MODE

Do not let the user get access to the service program mode. If a person other than service representatives gets access to the service program mode, the machine quality is not guaranteed.

Starting SP Mode

Start the service program mode as shown in procedure A or B. **NOTE:** The printer goes offline status while the service program mode is used.

A: When the main power switch is off

- 1. Push the on-line key [A] and the escape key [B] and hold them down.
- 2. Turn on the main power switch.
- 3. Hold the keys until the message "SYSTEM ver X.XX" is shown (where X.XX is the firmware version).

B: When the main power switch is on

- 1. Push the up arrow key [C] and down key [D] together for 5 seconds or more.
- 2. Push the enter key. The message "SYSTEM ver X.XX" is shown (where X.XX is the firmware version).

Selecting a Service Program

- 1. Use the up arrow key or the down arrow key to use one of these:
 - 1. Service: Gets access to the Controller Service Mode
 - 2. Engine: Gets access to the Engine Service Mode
 - 3: End: Goes out of the SP Mode
- 2. Push the enter key [E].
- 3. Use the up arrow key or the down arrow key to find the necessary service program.
- 4. Push the enter key.
- 5. To go back to step 1, push the escape key one or more times.

Changing a Setting

- 1. Start a service program (Selecting a Service Program). The current setting is shown.
- 2. Push the up arrow key or the down arrow key to input a value.

3. Push the enter key. The setting is changed.

NOTE: The setting does not change if you do not push the enter key.

To enable some settings, you must turn the main power switch off and on (Enabling Settings).

Quitting SP Mode

- 1. Push the escape key one or more times until one of these is shown
 - 1. Service
 - 2. Engine
- 2. Push the up arrow key or the down arrow key until this is shown:
 - 3: End
- 3. Push the enter key.

Enabling Settings

To enable the settings shown in this table, you must turn the main power switch off and on after you go out of SP Mode.

SP Modes Related to	SP Modes Related to
the Engine	the Controller
SP2-208-009	SP5-009-001
SP2-213-001	SP5-961-001
SP2-224-001 to 004	SP5-824-001
SP5-905-007	SP5-825-001
SP5-930-001 to 005	SP5-869
SP5-994-001 and 002	

Line Position Adjustment

If you change the settings of SP5-993-013 to 015, the new settings have an effect on the next line position adjustment.

5.1.2 REMARKS

Abbreviations and Symbols

These are the symbols and abbreviations in the service mode tables. (r 5.2.1/5.3.1).

Paper Type

- N Normal paper
- TH Thick paper

Color Mode

- [Color] Full-color mode
- [K] Black in B&W mode
- [Y] Yellow in full-color mode
- [M] Magenta in full-color mode
- [C] Cyan in the full-color mode
- [YMC] Yellow, magenta, and cyan
- [FC] Full-color mode
- [FC, K] Black in the full-color mode
- [FC, Y] Same as [Y]
- [FC, M] Same as [M]
- [FC, C] Same as [C]

Paper Feed Station

- P Paper tray
- B By-pass tray

Fusing Section

- H Heating roller
- P Pressure roller

Print Mode

- S Simplex
- D Duplex

Special Setting

- FA Factory setting (The setting could be adjusted before transportation. See the SMC Report behind the front cover.)
- **DFU** Design/Factory Use only (Do not change the setting.)

Possible Values

The service mode tables (5.2.1/5.3.1) show the possible values as follows: [Adjustable range / <u>Default setting</u> / Step] Alphanumeric

where "Alphanumeric" shows that the setting is displayed by numbers and letters. In this type of example, the letters are not shown in the service mode tables.

Line Speed

- H 185 mm/s: (Not used in this machine.)
- M 162 mm/s
- L 62.5 mm/s

Storage

- The setting is stored in the NVRAM (engine) or NVRAM (printer controller). If you clear the RAM, the setting returns to the default.
- BCU The setting is stored in the NVRAM on the BCU board.
- CTL The setting is stored in the NVRAM on the controller board.

Other

You must turn the main power switch off and on to enable the setting.

Service Tables

Process Speed

Some service programs are related to the line speed and the print speed. The line speed and the print speed change with the print mode (black & white/color), the resolution, and the paper type as shown in the table.

Mode	Resolution (dpi)	Line speed (mm/s)	Print speed (ppm)
B/W	600 x 600 1,200 x 600	162	35
	1,200 x 1,200	62.5	14
Color	600 x 600 1,200 x 600	162	35
	1,200 x 1,200	62.5	14
OHP/Thick	600 x 600 1,200 x 600 1,200 x 1,200	62.5	10

1104 053	Set Magenta 13	*CTL	
1104 073	Set Yellow 13	*CTL	
1104 014	Set Black 14	*CTI	[0 to 255 / 224 / 1/step]
1104 034	Set Cvan 14	*CTL	
1104 054	Set Magenta 14	*CTI	
1104 074	Set Yellow 14	*CTI	
1104 015	Set Black 15	*CTI	[0 to 255 / 240 / 1/step]
1104 035	Set Cvan 15	*CTI	[0 to 2007 <u>- 10</u> 7 motop]
1104 055	Set Magenta 15	*CTI	
1104 075	Set Yellow 15	*CTI	

1105	[ToneCtlSave]
	Saves the print gamma (adjusted with the Gamma Adj.) as the new Current Setting.
	Before the machine stores the new "current setting", it moves the data stored as the
	"current setting" to the "previous setting" memory-storage location.

1106	[Toner Limit]		
	Adjusts the maximum tone	er amo	unt for image development.
1106 001	TonerLimitPhot	*CTL	[100 to 400 / <u>260</u> / 1 %/step]
1106 002	TonerLimitText	*CTL	[100 to 400 / <u>190</u> / 1 %/step]

1107	[FactoryTestPrt]
	Prints the test page to check the color balance before transportation (600 x 600 2
	bit). DFU

5.2.2 BIT SWITCH PROGRAMMING

Do not change the bit switches unless you are told to do this by the manufacturer.

- 1. Start the SP mode. The "Service" menu is shown.
- 2. Press the enter key two times.
- 3. To select a bit switch, press the up arrow key or the down arrow key.
- 4. Push the enter key.
- 5. Set the value with these keys:
 - [▲] [▼]: Moves the cursor to one of the adjacent bits.
 - [Escape]: Goes out of the program without saving changes.
 - [Enter]: Goes out of the program and saves changes.

NOTE: The digit at the left [A] is bit 7 and the digit at the right [B] is bit 0.

/[A]

[B]

- 6. Push the escape key one or more times until the menu "Service" is shown.
- 7. Select "End" and push the enter key.

5-7

1003 006	B N: H	*BCU	
1003 007	B TH	*BCU	
1003 008	B OHP	*BCU	

1004	[Dev. Mt Speed] Develop	ment D	Drive Motor Speed		
	([Color], Process Speed, F	Paper 7	Гуре), Paper Type -> N: Normal, TH: Thick		
	Adjusts the development drive motor speed for correcting color shifts at the leading				
	edge or trailing edge area.				
	Black Motor [K]:				
	Adjusts fusing roller speed	for the	e trailing edge area.		
	Color Motor [YMC]:				
	Adjusts registration roller speed for the leading edge area.				
	NOTE:				
	• SP1-004-002 and 005 is for color mode. Fine adjustment for B&W mode can be				
	done with SP1-005-001	and 00)2.		
	• SP1-004-004 is for normal paper. Fine adjustment for thick paper can be done				
	with SP1-005-003.				
1004 001	[K]: L: N	*BCU	[96.0 to 104.0 / <u>100.0</u> / 0.1 %/step]		
1004 002	[K]: M	*BCU			

1004 003	[K]: H	*BCU	
1004 004	[YMC]: L	*BCU	[96.00 to 104.00 / 100.00 / 0.05 %/step]
1004 005	[YMC]: M	*BCU	
1004 006	[YMC]: H	*BCU	
1004 007	[K]: L: TH	*BCU	[96.0 to 104.0 / <u>100.0</u> / 0.1 %/step]

1005	[Dev. Mt Speed 2] Development Drive Motor Speed 2
1000	([Color] Process Sneed Paper Type) Paper Type -> TH: Thick
1005 001	[K] +8C1 [-0.2 to +1.0 / +0.2 / 0.1 %/sten]
1003 001	Adjusts the black development drive motor speed for the B&W 162mm/s process speed. The value stored in this SP mode is different from SP1-004-002 (see the note for SP 1-004).
	Black development motor speed for B/W at 162 mm/s = Black development motor speed for B/W at 162 mm/s (1-004-002) + 1-005-001.
	At the 162mm/s process speed, the transfer unit position for B&W is different than for color mode. The transfer unit position affects the paper transport quality, causing the paper to flip up at the fusing section if the same speed as color mode is used for B&W mode. To minimize the occurrence of paper flipping up, which causes smeared images in the trailing area, this SP mode can change the motor speed in B&W mode.
1005 002	[YMC] *BCU [-1.00 to 1.00 / 0 / 0.05 %/step] FA
	Adjusts the color development drive motor speed for the B&W 162mm/s process speed. The value stored in this SP mode is different from SP1-004-005 (see the note for SP 1-004).
	YMC development motor speed for B/W at 162 mm/s = YMC development motor speed for B/W at 162 mm/s (1-004-005) + 1-005-002
	At the 162mm/s process speed, the transfer unit position for B&W is different than for color mode. The transfer unit position affects the paper transport speed slightly. This SP mode can adjust the motor speed for B&W mode.
1005 003	[YMC] TH *BCU [-0.30 to 0.30 / <u>0</u> / 0.05 %/step]
	Adjust the color development drive motor speed for thick paper in by-pass mode. The value stored in this SP mode is different from SP1-004-004 (see the note for SP 1-004).
	Normal and thick paper are different types of paper, and this sometime causes color shift due to paper slippage. This SP mode can change the motor speed for thick paper.

1006	[Dev. Mt Speed3] Development Drive Motor Speed 3			
	([Color], Process Speed, Paper Type), Paper Type -> SP: Special			
	Adjusts the development motor speed for special paper.			
1006 001	[K]: L: SP	*BCU	[-4.0 to 4.0 / <u>0</u> / 0.1 %/step]	
1006 002	[K]: M: SP	*BCU		
1006 003	[YMC]: L: SP	*BCU	[-0.4 to 0.4 / <u>-0.1</u> / 0.05 %/step]	
1006 004	[YMC]: M: SP	*BCU		

1007	[Dev. Mt Speed4] Development Drive Motor Speed 4		
1007 001	[CL]: Mail TH	*BCJ	[-1.00 to 0.00 / <u>-0.40</u> / 0.05%/step]
	Adjusts the development	motor s	speed for postcards.
1007 002	[CL]: L: B/W TH	*BCU	[-0.40 to 0.40 / <u>0.00</u> / 0.05/step]
	Adjusts the registration line speed for the B&W mode for thick paper. The line speed		
	is calculated as follows:		
	Line speed = SP1-004-00	4 + SP	1-005-003 + SP1-007-002

1106	[Temp. Display] Fusing Temperature Display (Heating or Pressure)		
	Displays the current temperature of the heating and pressure rollers.		
1106 001	H Roller		[0 to 200 / - / 1°C/step]
1106 002	P Roller		

1902	[Paper Size] Tray Paper Size			
1902 001	Tray 1 A4/LT	*BCU	[0 or 1 / <u>0</u> / -] Alphanumeric	
			0: A4 sideways, 1: LT sideways	
	Specifies the paper size for US: 1 FA	or tray	1. Tray 1 can only use these two sizes.	
1902 002	Tray 2 B4/LG	*BCU	[0 or 1 / <u>0 /</u> -] Alphanumeric	
			0: B4 lengthwise, 1: LG lengthwise	
	Specifies the paper size for output of 1101 (see section US: 1 FA	cifies the paper size for tray 2. This specifies which size is detected for a sensor out of 1101 (see section 6 for details). 1 FA		

1902 003	Tray 2 A4/LT	*BCU	[0 or 1 / 0 / -] Alphanumeric
	Specifies the paper size for	or trav	2 This specifies which size is detected for a sensor
	output of 0110 (see sectio US: 1 FA	n 6 for	details).
1902 004	Tray 2 B5/LT	*BCU	[0 or 1 / <u>0</u> / -] Alphanumeric 0: LT, 1: B5 lengthwise
	Specifies the paper size for tray 2. This specifies which size is detected for a sense		
	output of 1011 (see section 6 for details).		
1902 005	Fix Size	*BCU	[0 or 1 / <u>0</u> / -] Alphanumeric 0: OFF, 1: ON
 ON: The by-pass tray automatically detects the paper size and its The process speed is decreased to 1/2. 		atically detects the paper size and its orientation. ecreased to 1/2.	
	OFF: The by-pass tray at the normal spe	does r ed.	not detect the paper size. The process speed stays

1910	[Idling Time] (Fusing Idling Time) *BCU [0 to 180 / 1 / 1 minute/step] DFU
	Specifies the timer for deciding whether to do fusing idling when receiving a print
	command. When receiving a new job within the time specified in this SP mode after
	the last job is completed, fusing idling is not done because the fusing section was
	already warmed up during the last job.

1912	[Machine Temp.] Machine Temperature Correction					
	Th: Threshold, Heating or Pressure roller					
	Corrects the fusing temperature depending on the temperature inside the machine.					
	If the temperature inside the machine is too high or low, this may cause hot or cold					
	offset image at the fusing section. To avoid the offset image, the fusing temperature					
	is corrected depending on the temperature inside machine, which is monitored by					
	the thermistor located on the right side of the laser optics housing unit. If the					
	temperature inside the machine is detected as high or low (based on the settings of					
	SP1-912-001 or 002), the	fusing temperature is decreased or increased by the				
	temperature specified in S	P1-912-003 to 006.				
1912 001	Th:High Temp	*BCU [0 to 50 / <u>30</u> / 1°C/step]				
	Sets the threshold for entering the high temperature condition.					
1912 002	Th:Low Temp	*BCU [0 to 50 / <u>17</u> / 1°C/step]				
	Sets the threshold for entering the low temperature condition.					
1912 003	H: High Temp	*BCU [0 to 15 / <u>0</u> / 1°C/step]				
	Sets the fusing temperature decrease for the high temperature condition.					
1912 004	P: High Temp	*BCU [0 to 15 / <u>0</u> / 1°C/step]				
1912 005	H: Low Temp	*BCU [0 to 15 / <u>5</u> / 1°C/step]				
	Sets the fusing temperature increase for the low temperature condition.					
1912 006	P: Low Temp	*BCU [0 to 15 / <u>5</u> / 1°C/step]				
1913	[Temp. Cor. 1] Fusing Te	mpera	ture Correction (Correction Timing)			
----------	---	---------	---	--	--	--
	Specifies the number of s	heets t	o determine whether or not to apply the fusing			
	temperature correction. During a multi print job, the fusing temperature tends to					
	slightly overshoot around the 10th sheet and then stabilize. Temperature					
	overshooting may cause the glossiness to increase. To minimize the overshooting,					
	both fusing and pressure roller temperatures are decreased by the amount specified					
	in SP1-914 at the number	of she	ets specified in this SP mode, until the end of the			
	job. The temperatures are	e decre	ased in two steps.			
	Example: 162 mm/s line s	peed				
	First step (also called 'Mo	de 1'):	After 5 sheets (SP 1-913-2), temperature drops by			
	5°C (SP 1-914-2).					
	Second step (also called 'Mode 2'): After 20 sheets (SP 1-913-7), temperature drops					
	by 10°C (SP 1-914-7).					
	Narrow: LT/A4 SEF width	or less				
	Wide: Wider than LT/A4 S	SEF				
1912 001	Mode 1: H	*BCU	[1 to 255 / <u>5</u> / 1 sheet/step]			
1912 002	Mode 1: M	*BCU				
1912 003	Mode 1: L	*BCU				
1912 004	Mode 1 OHP narrow	*BCU				
1912 005	Mode 1: H: wide	*BCU	[1 to 255 / <u>10</u> / 1 sheet/step]			
1912 006	Mode 2: H	*BCU	[1 to 255 / <u>20</u> / 1 sheet/step]

1914 008	Temp 2:L	*BCU	[0 to 20 / <u>10</u> / 5°C /step]	
1914 009	Temp 2 OHP narrow	*BCU	[0 to 20 / <u>5</u> / 5°C /step]	
1914 010	Temp 2 OHP wide	*BOU	[0 to 20 / <u>5</u> / 5°C /step]	

1915	[Stand-by Time]		
1915 001	Job Receiving	*BCU	[0 to 180 / 60 / 10 seconds/step]
			0: The machine does not shift to the stand-by
			mode.
	Specifies the time to shift the machine into the stand-by mode when not re-		
	print start command after receiving a print preparation command.		
1915 002	02 Job End *BCU [0 to 180 / 30 / 10 seconds/step]		[0 to 180 / <u>30</u> / 10 seconds/step]
			0: The machine does not shift to the stand-by
	mode.		
	Specifies the time to shift the machine into the stand-by mode after the last job is completed.		

1916	[Idling Mode]			
1916 001	Mode Set	*BCU	[0 to 1 / <u>0</u> / 1 /step]	
			0: Off, 1: On	
	Executes the extra idling of	operation	on after the fusing unit becomes ready just after the	
	main switch has been turr	ned on.		
1916 002	Idling Time	*BCU	[10 to 120 / <u>30</u> / 10 sec/step]	
	Specifies how long the ex	tra idlir	ng operation is executed.	
1916 003	PreJob Mode	*BCU	[0 to 2 / <u>0</u> / 1 /step]	
			0: Off	
			1: When a job gets to the printer	
			2: When a job gets to the printer and the	
			machine's internal temperature is less	
			than the temperature set with SP1-912-002	
			(default: 17°C).	
	Executes the extra idling operation after the fusing unit becomes ready when a print			
	job arrives at the printer.			
1916 004	Idling Time SP: H	*BCU	[0 to 360 / <u>0</u> / 1 sec/step] DFU	
	Specifies how long the extra idling operation is executed when special paper is used and the line speed is 185 mm/s.			

1996	[OHP/TH Fusing] OHP/T (Heating or Pressure Rolle	hick Pa er)	aper Fusing Temperature Correction		
	Specifies the temperature	for sta	irting a print job.		
	The fusing section is already warmed up when the last print job was completed. If				
	prints are made on OHP or thick paper at this time, the fusing temperature tends to				
	be higher than the target,	causin	g exit roller marks or a paper jam in the fusing		
	section. To prevent this, the print job will not start if the heating and pressure roller				
	temperatures are higher than the following:				
	(Target temperature specified by SP1-105-12, -13, -23, -24) - (Temperature				
	specified by this SP mode (default: 5°C for heating roller, 10°C for pressure roller))				
1996 004	H:Print Temp	*BCU	[0 to 20 / <u>0</u> / 1°C /step]		
1996 005	P: Print Temp	*BCU	[0 to 20 / <u>0</u> / 1°C /step]		
1996 006	PreJob Mode	*BCU	[0 to 1 / <u>0</u> / 1 /step]		
	0: Off, 1: On				
	This SP enables or disables the 30-second fusing unit idling at the start of an OHP				
	print job. When enabled, i	dling is	done even if the machine is in the ready condition.		

SP2-XXX (Drum)

2001 [Charge Bias] Charge Roller Bias (DC or AC component: [Color], Process Speed)					
	U: Upper, L: Lower				
Adjusts the	Adjusts the DC component of the charge roller bias in the various print modes.				
Charge bias	s (DC component) is autom	atically	adjusted during process control; therefore,		
adjusting th	ese settings does not effec	t while	process control mode (SP3-125 Default: ON) is		
activated. V	When deactivating process of	control	mode with SP3-125, the values in these SP modes		
are used for	r printing.				
2001 001	DC: [K]	*BCU	[300 to 1000 / <u>700</u> / 10 volts/step] DFU		
2001 002	DC: [Y]	*BCU			
2001 003	DC: [M]	*BCU			
2001 004	DC: [C]	*BCU			
 Displays t 	he AC component of the ch	arge ro	oller bias adjusted during machine initialization or		
process cor	ntrol self-check.				
 Sets AC b 	ias in the various print mod	les for	test purposes.		
If the optime	um AC bias cannot be seled	cted be	cause of the settings of SP2-001-014 through 017,		
this may ca	use white spots on images	and bla	ack spots on background. (In particular, spots may		
appear if the	e room temperature is very	low.)			
Check the p	printouts after changing the	AC bia	is with these SP modes (SP2-001-005 through 013)		
and exiting	SP mode. If increasing or d	ecreas	sing the AC bias for relevant color solves the spot		
problem, sh	ant the AC target (SP2-001-	014 thr	ough 017) by the value increased or decreased

2207	[Forced Toner] Forced Toner Supply ([Color])			
	Forces toner to be supplied to the development unit. The toner supply clutch turns on for 0.7 s and off for 1.3 s.			ce
2207 001	[K]		[0 or 1 / <u>0</u> / 1 /step]	∧_i€
2207 002	[Y]		0: Not execute, 1: Execute	Š
2207 003	[M]			
2207 004	[C]			

2208	[Toner Mode] Toner Supply Method ([Color])		
2208 001	[K]	*BCJ	Selects the toner supply method.
2208 002	[Y]	*BCU	[0 to 2 / <u>1</u> / 1/step] Alphanumeric
2208 003	[M]	*BCU	0: Fixed supply (with the supply rates stored with
2208 004	[C]	*BCU	SP2-208-5 to 8)
			1: Fuzzy control supply
			2: Proportional control supply (using the Vref
			values stored with SP2-224-5 to 8)
2208 005	Fixed Rate [K]	*BCJ	Sets the toner supply rate used when the toner
2208 006	Fixed Rate [Y]	*BCJ	supply method (SP2-208-1 to 4) is set to '0' (fixed
2208 007	Fixed Rate [M]	*BCU	supply mode).
2208 008	Fixed Rate [C]	*BCJ	[0 to 100 / <u>5</u> / 1%/step]

2208 009	Upper Limit	*BCU #	Specifies the maximum possible toner supply, expressed as a percentage of the maximum amount of toner that can possibly be supplied for a sheet of paper. If too much toner is supplied to the development unit especially for black or in the low humidity condition, this may cause dirty background due to insufficient agitation. This SP mode limits the
			maximum possible toner supply for black and only in the low humidity condition for color.
			[0 to 100 / 63 / 1 %/step] DFU
			NOTE: The main switch must be turned off and on
			to effect the setting change.
2208 010	LowCoverage[K]	*BCU	Adjusts the toner supply amount (fixed rate) when
2208 011	LowCoverage[Y]	*BCU	making multiple prints of pages with low image
2208 012	LowCoverage[M]	*BCU	ratio (coverage).
2208 013	LowCoverage[C]	*BCU	When printing with a low image ratio, toner
			concentration is controlled only with vt outputs
			This may cause the attraction force between toner
			and carrier to increase, resulting in low image
			density on outputs. To prevent this, the machine
			counts the number of pixels and supplies a fixed
			amount of toner if the accumulated number of
			pixels becomes greater than the specified level.
			[0 to 100 / <u>0</u> / 1 %/step] DFU
2208 014	Vt Coeff[Bk]	*BCU	Specifies each constant to adjust the toner supply

2210	[Toner Counter] Toner Supply Counter ([Color])			
	Displays the total time that the toner supply clutch has been on. This data is stored			
	in the memory chip on each toner cartridge.			
2210 005	[K]	*BCU	[0 to 5000 / <u>0</u> / 1 second/step]	
2210 006	[Y]	*BCU		
2210 007	[M]	*BCU		
2210 008	[C]	*BCU		

2212	[Toner Near/End] Toner Near End / End Detection Threshold ([Color])			
2212 001	Start [K]	*BCU	When the amount of toner amount left in the	
2212 002	Start [YMC]	*BCU	cartridge becomes less than this value, the machine starts monitoring the Vt values for toner near end detection. [0 to 1000 / <u>100</u> / 10 g/step]	
2212 005	Near [K]	*BCU	Specifies the threshold for toner near-end	

	-		
2212 006	Near [YMC]	*BCU	detection.
			The machine detects toner near-end when the
			following happens 10 times consecutively.
			Vt > Vref + Threshold
			[0 to 5.0 / 0.4 / 0.1 V/step]
2212 007	End [K]	*BCU	Specifies the threshold for toner end detection.
2212 008	End [YMC]	*BCU	The machine detects toner end when the following
			happens 10 times consecutively. Then, the
			machine stops printing, even during a print job.
			Vt > Vref + Threshold
			[0 to 5.0 / 0.5 / 0.1 V/step]
2212 009	Pixel [K]	*BCU	Specifies the number of sheets with full image
2212 010	Pixel [YMC]	*BCU	coverage that can be printed after toner near-end
2212 010		200	has been detected
			When near-end is detected, the pixels in the
			images are counted. The machine detects toner
			end when the following happens, and the machine
			stops printing even during a print job
			Pixel count = 5 A4/I T sheets with full
			image coverage
			[0 to 255 / 50 / 1 sheet/step]
			NOTE: The setting of SP2-212-11 has priority for
			deciding when to stop printing
2212 011	Min Print	*BCU	Specifies the minimum number of sheets that can
2212 011		200	be printed after toner near-end has been detected
			However, when the following happens 10
			consecutive times the machine stops printing
			even during a print job or if this guaranteed
			minimum has not been met
			Vt > Current Vref value + 1 2V or Vt > 4 8V
			[0 to 50 / 10 / 1 sheet/sten]
2212 012	sensor avg [K]	*BCI I	Displays the average signal value of the toper end
2212 012	sensor avg [Y]	*BCI I	sensor Printed images can be weak when the
2212 013	sensor avg [M]	*B(1)	value is larger
2212 014	sensor avg [M]	*BCU	[0 to 1 / 0 / 0 01/step]
2212 013		0.00	Each toner sensor detects the toner that is falling
			through the toner path beneath the toner
			cartridge. Each sensor outputs "0" when it detects
			toner in the toner path, or outputs "1" when it does
			not detect toner. The signal is "1" if toner is not
			passing through the path even though the toner
			cartridge contains toner. These signals "0" and
			"1" are periodically checked and used to calculate
			the signal average. When enough toner is in the
			cartridge, the signal average is a smaller value
			("0" or its vicinity) When toner is insufficient the
			average is a larger value ("1" or its vicinity).

2213	[T End ON/OFF] Toner End	*BCU	[0 to 2 / <u>1</u> / 1 /step] Alphanumeric, DFU
	Detection ON/OFF	#	0: Both sensors disabled
			1: Both sensors enabled
			2: Toner end sensor disabled and TD
			sensor enabled
	Enables or disables toner near-en	d and er	nd detection (if disabled, the toner supply
	clutch on time is still counted). Use	e this SF	P only when tests are necessary under the
	toner end or toner near end condition. Specify the default value after the tests.		
	NOTE: The main switch must be t	urned of	f and on to effect the setting change.

2223	[TD Vcnt] TD Sensor Vcn	t Contr	ol	
2223 001	Initialization	*BCU	[0 or 1 / <u>1</u> / -] Alphanumeric, DFU	
			0: Disabled, 1: Enabled	
	Enables or disables the Vcnt Auto Adjustment when detecting a new development			
	unit. When the machine d	etects	a new development unit, developer initialization	
	automatically starts. Durin	g the d	leveloper initialization, Vcnt is automatically	
	adjusted so that Vt is with	in 3.0 ±	± 0.1V.	
2223 002	Humidity	*BCU	[0 or 1 / <u>1</u> / -] Alphanumeric	
			0: Disabled, 1: Enabled	
	Enables or disables the H	umidity	Auto Correction. This corrects the Vcnt value for	
	the current humidity. This	correct	tion is applied to both the Vcnt values automatically	
	adjusted during developer	initiali:	zation and manually adjusted with SP2-224-1 to 4.	
	If this correction does not	work w	ell under certain environmental conditions or due to	
	a defective humidity sense	or, dea	ctivate the Humidity Auto Correction and adjust the	
	Vcnt value in SP2-224-1 to	o 4 (by	trial and error).	
2223 003	Toner Fill Up	*BCU	[0 or 1 / <u>0</u> / -] Alphanumeric, DFU	
			0: Deactivate, 1: Activate	
	Activates or deactivates the Toner Fill Up mode, which fills up the toner supply			
	with toner during developer initialization. This function is required only at machine			
	installation. Although the c	default	is "0", the factory setting is "1". After toner fill-up	
	occurs during machine ins	stallatio	on, the setting is changed to "0" automatically.	

2224	224 [Vcnt / Vref] Vcnt / Vref ([Color])				
Adjusts the	Vcnt value manually. The v	alue in	this SP mode is effective until after the next		
process cor	ntrol self-check. To always ເ	use this	value for some reason, select proportional control		
supply mod	e with SP2-208-1 to 4.		-

2309	[Cur.Paper Size] Transfe Paper Type -> N: Normal,	r Curre TH: TI	nt - Paper Size Correction nick, OHP
	Corrects the transfer current for paper size. When small paper is used for printing, the transfer current flows to the drum at the non-image areas where the transfer belt touches the OPC drum. This may cause an abnormal image due to insufficient current at the image areas. NOTE: Increase only when an abnormal image (insufficient image transfer) occurs on a small paper size. However, increasing the current too much may cause image offset.

2802	[PA Cur. Size] Paper Attraction Roller Current - Paper Size Correction		
	Paper Type -> N: Normal, TH: Thick, OHP		
	Adjusts the correction, depending on the paper size.		
	When small-width paper is used for printing, the paper attraction roller current flows		
	to the non-image areas of OPC drum where the transfer belt touches the drum. This		
	may cause paper misfeed due to insufficient current.		
	To increase the current by 1.5 times, set the SP mode to "15".		
	NOTE: Adjust only when a paper misfeed occurs with a small paper size. Increasing		
	the current too much may cause image offset in magenta halftone areas.		
2802 001	N LT SEF *BCU [10 to 40 / <u>15</u> / 0.1/step]

2994 003	[C]	*BCU	[-128 to 127 / <u>1</u> / 1 dot/step] DFU
2994 004	[K]	*BCU	[-128 to 127 / <u>0</u> / 1 dot/step] DFU

2995	[Motor Reset] Mirror Positioning Motor Reset *BCU
	Rotates the mirror position motors (CMY) by 250 pulses clockwise; then by 125 pulses counterclockwise. This moves the mirrors back to the initial position. Then, the settings of SP2-908-002 to 004 are reset to 0. When the line position adjustment fails, it is one of possible causes when the mirror position motor locks. Performing this SP mode can move the mirrors back to the original position if it locks. Then, do the forced line position adjustment (SP5-993-002)

SP3-XXX (Process)

3005	[TD Initial] TD Sensor Initialization ([Color])		
3005 001	[K]		Initializes the developer. DFU
3005 002	[Y]		Press the Enter key to execute the initialization
3005 003	[M]		after the machine asks "Execute?"
3005 004	[C]		
3005 005	[All Color]		
3005 006	Result	*BCU	[1 to 9 / - / -]
			1: Success, 2 to 9: Failure
	Displays the developer ini	tializati	on result.
	All colors are displayed. Values is displayed in the order K Y C M.		
	e.g., 1 1 2 1: Initialization of Cyan failed but the others succeeded		
	See the troubleshooting set	ection f	for details.

3006	[Vcnt Initial] Vcnt Initial Setting Display ([Color])		
3006 001	[K]	*BCU	Displays the initial Vcnt value.
3006 002	[Y]	*BCU	[0 to 240 / <u>100</u> / 0.1/step]
3006 003	[M]	*BCU	
3006 004	[C]	*BCU	

3007	[Vcnt Current] Vcnt Current Value Display ([Color])		
3007 001	[K]	*BCU	Displays the current Vcnt value.
3007 002	[Y]	*BCU	[0 to 240 / - / 0.1/step]
3007003	[M]	*BCU	
3007004	[C]	*BCU	

3008	[Humidity]	*BCU [0 to 100 / - / 1/step]
	Displays the humidity mea	asured by the humidity/temperature sensor.

3107	[Vsg Display] Vsg Display (Front or Rear)			
3107 001	Vsg F *BCU [0.00 to 5.00 / - / 0.01V/step]			
	Displays the Vsg value of the front ID sensor.			
	Vsg is normally 4.0 ± 0.5 V.			
	If Vsg is out of the adjustment range and this is detected 3 times consecutively, it			
	leads to SC385.			
3107 002	LED Current F *BCU [0 to 1023 / - / 1]			
	Displays the ID sensor LED current adjusted during Vsg adjustment.			
3107 003	Vsg C *BCU [0.00 to 5.00 / - / 0.01V/step]			
	Displays the Vsg value of the center ID sensor.			
	Vsg is normally 4.0 ± 0.5 V.			
	If Vsg is out of the adjustment range and this is detected 3 times consecutively, it			
	leads to SC385.			
3107 004	LED Current C			
	Displays the ID sensor LED current adjusted during Vsg adjustment.			
3107 005	Vsg R *BCU [0.00 to 5.00 / - / 0.01V/step]			
	Displays the Vsg value of the rear ID sensor.			
	Vsg is normally 4.0 ± 0.5 V.			
	If Vsg is out of the adjustment range and this is detected 3 times consecutively, it			
	leads to SC385.			
3107 006	LED Current R *BCU [0 to 1025 / - / 1]			
	Displays the ID sensor LED current adjusted during Vsg adjustment.			

20 February 2004

3107 007	Vsg avg bk	*BCU [0.00 to 5.00 / - / 0.01V/step]
	Displays the average blac	k Vsg value of the center ID sensor.

3120	[Dev. g Target] Development Gamma Target ([Color])			
	Adjusts the development gamma by changing the Vref value used for toner density			
	control. Vref is automatica	ally corr	rected so that the gamma measured during the	
	process control self-check	becon	nes "the value set with this SP mode \pm 0.15"	
3120 001	[K]	*BCU	[1.00 to 3.00 / <u>1.60</u> / 1 mg/cm ² /KV / step] DFU	
3120 002	[Y]	*BCU	[.100 to 3.00 / <u>1.65</u> / 1 mg/cm ² /KV / step] DFU	
3120 003	[M]	*BCU		
3120 004	[C]	*BCU		

3121	[Dev. g Display] Development Gamma Display ([Color]) Displays the development gamma measured during the process control self-check.			
3121 001	[K] *BCU [0 to 10.00 / - / 1 mg/cm2/KV /step]			
3121 002	[Y]	*BCU	Normal Range: 1.00 to 2.00	
3121 003	[M]	*BCU		
3121 004	[C]	*BCU		

3122	[Vk Display] Vk Display ([Color])	
3122 001	[K]	*BCU	Displays the current Vk value.
3122 002	[Y]	₿CU	[-255 to 255 / - / 1 V/step]
3122 003	[M]	*BCU	Normal Range: -50 to 50
3122 004	[C]	*BCU	

3123	[Vref Display] Current Vref Display ([Color])		
3123 001	[K]	*BCU	Displays the current Vref value.
3123 002	[Y]	*BCU	[0.0 to 5.0 / - / 0.1V/step]
3123 003	[M]	*BCU	
3123 004	[C]	*BCU	

3125	[Process Contr.] Process Control		
3125 001	ON/OFF	*BCU	[0 or 1 / <u>1</u> / 1/step] Alphanumeric 0: OFF (Use the fixed values for VD, VL and VB set with SP2-001, SP2-103, and SP2-201.) 1: ON
	Enables or disables proce	ss con	trol.
3125 002	LD Control	*BCU	[0 to 2 / <u>1</u> / 1/step] Alphanumeric 0: Fixed (at the value in SP2-103) 1: Controlled by process control 2: Controlled by LD power selection
	Selects the LD control mo	de.	

3125 003	Auto TD Adj.	*BCU	[0 to 3 / <u>0</u> / 1/step] Alphanumeric
			0: Disable
			1: Initial & Non-use self-check
			2: Job end & Non-use self-check
			3: Initial & Job end & Non-use self-check
	Specifies when to perform	the Au	to Toner Density Adjustment. When performing the
	Auto Toner Density Adjustr	nent, i	the machine supplies or consumes toner so that the
	development gamma is with	hin±(0.15 of the gamma target.
	Change if the user complai	ns of t	toner density fluctuations. Before changing the
	setting away from 0, check	wheth	her the forced TD adjustment (3-126-2) is effective.
	If the problem is persistent,	then	change to 1, 2, or 3. However, the machine takes
	several minutes to do this a	adjusti	ment.
3125 004	ACC	*BCU	[0 to 2 / <u>2</u> / 1/step] Not used
			0: Disable
			1: Process Control Self-check
			2: Auto TD Adjustment & Process Control Self-
			check
	Enables or disables the pro	ocess	control self-check before printing the ACC pattern.
	NOTE: If color balance cha	inges	during multi-copy runs after ACC is performed,
	select 1 or 2. Setting 2 can	precis	sely adjust the image density; however, it takes
	about 6 minutes. Select 1 c	or 2 de	epending on the user's requirement.
3125 005	TD Adj. Cndtn	*BCU	[0 to 1 / <u>1</u> / 1/step]
			0: No, 1: Yes
	Specifies whether temperat	ture a	nd humidity are taken into account when deciding
	the timing of the auto toner	densi	ity adjustment (described in SP 3-125-3).
	I iming for the auto toner de	ensity	adjustment is determined by the setting of SP3-
	125-003. In addition, If SP 3	3-125-	-5 is set to 1, the auto toner density adjustment is
	done when the temperature	e and	numially meet specified conditions (same
	Conditions as used for trans		Inent conection).
2125.000			
3125 006	ID Adj. Times	BUU	[1 to 3 / <u>3</u> / 1/Step]
	Limits the number of auto to	oner c	iensity adjustments. The auto toner density
	aujustment consists of thre	e siep	is, detecting the development gamma, supplying or
	consuming toner, and deter	cung t	ne development gamma again. vvnen triese three
	steps are all complete, it m	eans a	a single auto toner density adjustment is complete.

3126	[Forced SelfChk] Forced Self-check		
3126 001	Forced SelfChk	Performs a forced process control self-check.	
3126 002	Forced TD Adj.	Performs a forced auto toner density adjustment.	

3902	[Pntr. Display] Pointer Ta	able Dis	splay ([Color])
3902 001	Printer [K]	*BCU	Displays the number in the pointer table that was
3902 002	Printer [Y]	*BCU	selected during the latest process control self-
3902 003	Printer [M]	*BCU	check.
3902 004	Printer [C]	*BCU	[1 to 30 / - / 1/step]
3902 005	CF [K]	*	DFU
3902 006	CF [Y]	*	
3902 007	CF [M]	*	
3902 008	CF [C]	*	

3903	[M/A Target] M/A Target	([Color])
	Adjusts the M/A (Mass pe	r A rea,	mg/cm ²) value used during the process control
	self-check. Adjusting this	change	es the development bias. This causes the solid ID to
	increase or decrease. If de	evelope	er capability causes an ID problem, toner density
	needs to be adjusted with	SP3-1	20-1 to 4, depending on the color.
3903 001	Printer [K]	*BCU	[0 to 1.50 / <u>0.60</u> / 0.01 mg/cm ² /step] DFU
3903 002	Printer [Y]	*BCU	
3903 003	Printer [M]	*BCU	
3903 004	Printer [C]	*BCU	
3903 005	CF [K]	*	[0 to 1.50 / <u>0.60</u> / 0.01 mg/cm ² /step] DFU
3903 006	CF [Y]	*	
3903 007	CF [M]	*	
3903 008	CF [C]	*	

3904	[M/A for LD] M/A Target for LD Correction ([Color])		
	Adjusts the M/A value use	d durir	g the LD correction mode. This value is effective
	when SP3-125-2 "LD Con	trol Se	lection" is set to "2".
	Adjusting this data effects	the im	age reproduction especially in highlight areas.
3904 001	Printer [K]	*BCU	[0 to 1.00 / 0.10 / 0.01 mg/cm2 /step] DFU
3904 002	Printer [Y]	*BCU	[0 to 1.00 / 0.12 / 0.01 mg/cm2 /step] DFU
3904 003	Printer [M]	*BCU	
3904 004	Printer [C]	*BCU	
3904 005	CF [K]	*	[0 to 1.00 / 0.13 / 0.01 mg/cm2 /step] DFU
3904 006	CF [Y]	*	[0 to 1.00 / 0.14 / 0.01 mg/cm2 /step] DFU
3904 007	CF [M]	*	
3904 008	CF [C]	*	

3905	[M/A Target]		
3905 001	Intrvl [K]	*BCU	[0 to 1.50 / <u>0.30</u> / 0.01 mg/cm ² /step] DFU
3905 002	Intrvl [Y]	*BCU	Adjusts the target amount of each toner on paper
3905 003	Intrvl [M]	*BCU	sheets. These values are optimized before
3905 004	Intrvl [C]	*BCU	shipment. Do not change the values. Changing these values does not affect toner density on paper sheets.
3905 005	Intrvl [K]	*BCU	[0 to 1.500 / - / 0.01 mg/cm ² /step]
3905 006	Intrvl [Y]	*BCU	Displays the amount of each toner on the paper. A
3905 007	Intrvl [M]	*BCU	problem may have occurred in the printer engine if
3905 008	Intrvl [C]	*BCU	the value is high or low (i.e., if the difference between SP3-905-1/2/3/4 and SP3-5/6/7/8 is larger than ± 0.03 mg/cm ²). Possible problems: Defective TD sensor, defective ID sensor, toner near-end (if the value is lower than the target), defective toner supply mechanism

3906	[PC SelfChk] Process Control Self-checks			
3906 001	Job End *BCU [0 to 999 / <u>200</u> / 1 print/step]			
	Specifies the execution timing of the job end process control self-check.			
	The job end process control self-check is automatically done after a job is completed			
	when 200 prints have been made since the last self-check.			
	The counter for the job end process control self-check resets when one of the			
	following process control self-checks is done.			
	• Initial			
	Interval: Interrupt			
	Non-use Time			
	During Toner End			
	When K prints are made, the number of prints is calculated with the K coefficient in			
3906 002	Interrupt [7800] [0 to 999 / 0 / 1 print/step]			
	Specifies the execution timing of the interrupt process control self-check.			
	I ne interrupt process control self-check is automatically done if the number of prints			
	In the job exceeds the number set in this SP mode. When the print job is completed,			
	When K prints are made, the number of prints is calculated with the K coefficient in			
	SP3-906-5.			
3906 003	Non-use Time 1 *BCU [0 to 999 / 0 / 1 print/step]			
	0: Disable			
	Specifies the executing timing of the non-use time process control self-check.			
	The non-use time process control self-check is automatically done after the number			
	of prints set with this SP mode have been made and no prints have been made for			
	the time set with SP mode 3-906-4 since the last print job.			
	If the conditions are met, the self-check will be done after the print job is completed.			
	rine counter is reset when the initial process control sell-checks is done of when a			
3006.004	Non uso Timo 2			
3900 004	$\begin{bmatrix} 101-use \\ 1111e \\ 2 \end{bmatrix} = \begin{bmatrix} 10123307 \\ \underline{400}7 \\ 1011111utes/step \end{bmatrix}$			
	Specifies the executing timing of the pon-use time process control self-check			
3906 005	K Coefficient RCI I I to 1 00 / 1 00 / 0 01/sten] DEL			
0000 000	Sets the coefficient to calculate the counter value for black-and-white prints			
	With the default setting (100) counters used for process control count up by 1 when			
	1 black-and-white print has been made.			
	1 black-and-white print has been made.			

3910	[Vmin Display] Vmin Display ([Color])		
3910 001	[K]	*BCU [0 to 2.00 / <u>0</u> / 0.01/step]	
	Displays the current Vmin value for K		
3910 002	[Color]	*BCU [0 to 2.00 / <u>0</u> / 0.01/step]	
	Displays the lowest current Vmin value for the colors (CMY).		

3911	[Vt Display Cur] Vt Current Display ([Color])		
3911 001	[K]	*BCU	Displays the current Vt value.
3911 002	[Y]	*BCU	[0.0 to 5.0 / - / 0.1V/step]
3911 003	[M]	*BCU	
3911 004	[C]	*BCU	

3912	[Vt Display Ave] Vt Average Display ([Color])		
3912 001	[K]	₿CU	Displays the average Vt value.
3912 002	[Y]	*BCU	[0.0 to 5.0 / - / 0.1V/step]
3912 003	[M]	*BCU	
3912 004	[C]	*BCU	

3913	[T. Supply Time] Toner Supply Time Display ([Color])			
3913 001	[K]	*BCU	Displays the toner supply clutch on time for the	
3913 002	[Y]	*BCU	most recent page.	
3913 003	[M]	*BCU	[0 to 5000 / - / 10 ms/step]	
3913 004	[C]	*BCU		

3920	[OPC Refresh]			
3920 001	Temperature *BCU [10 to 30 / 25 / 1°C /step]			
	This SP determines the temperature threshold for determining whether refresh			
	mode is done just after the machine is switched on.			
	The charge roller generates NOx (nitrogen oxides), and these contaminate the OPC			
	drum surface and may cause a smeared image.			
	Just after the main switch is turned on, if the temperature measured by both the			
	thermistor located at the right side on the laser optics housing unit and the			
	temperature/humidity sensor is greater than the temperature specified in this SP			
	mode, refresh mode is done before initial process control.			
	During reflexin mode, toner is developed on the OPC with 50V development			
3020 002	Humidity POLI [10 to 00 / 75 / 1%/stop]			
3920 002	This SP determines the humidity threshold for determining whether refresh mode is			
	done just after the machine is switched on			
	Just after the main switch is turned on, if the humidity measured by the			
	temperature/humidity sensor is greater than the humidity specified in this SP mode.			
	refresh mode is done before the initial process control self-check.			
3920 003	Prints *BCU [10 to 2550 / 200 / 10 prints/step]			
	Specifies how often refresh mode is done.			
	When the total number of prints since the last refresh mode exceeds the number			
	specified in this SP mode, refresh mode is done before the job end process control			
	self-check.			
3920 004	Mode Set [0 to 2 / 2 / 1/step] Alphanumeric			
	U: Disabled			
	2: Done at power on toper end recovery			
	after the specified number of prints			
	Enables/disables refresh mode.			
	NOTE: Refresh mode is done during the toner end recovery self-check after a new			
	toner cartridge is installed.			
3920 005	Forced			
	Executes a forced refresh mode. Use this mode when the image is smeared. It			
	takes about 1 minute.			
3920 006	Auto Tnr Ref *BCU [0 or 1 / <u>1</u> / -]			
	(Auto I oner Refresh) 0: Disabled, 1: Enabled			
	Performs a toner refresh during the OPC refresh mode by changing the			
	development bias from 50V to 400V. Enable this SP mode when dirty background			
	making prints with a low image area ratio, developer is agitated with less toper			
	supplied. This may cause the toner-carrier attraction force to increase or toner to			
	coagulate. This sometimes causes firefly spots or dirty background when a large			
	amount of toner is supplied.			
	NOTE: When enabling this SP mode, the following SP modes should be changed.			
	SP3-906-001 Job End Process Control Self-check			
	200 (Default) -> 100			
	SP3-920-003 OPC Refresh Mode / Prints			
	200 (Default) -> 100			

3921	[Forced Tnr Ref] Forced Toner Refresh							
	Perform forced toner refresh mode.							
	When the developer has deteriorated or when prints are made in a very low humidity							
	When this kind of dirty background appears, check whether or not the developmen gamma is within the target (SP3-120 and 121). If the development gamma is not within the target do this SD mode							
	 The machine automatically does the toner refresh mode in the following sequence. Consumes toner in the development unit without toner supply until toner end is detected 							
	 Starts toner recovery mode. Starts process control self-check. 							
	NOTE: If toner is drastically consumed for a short time, this may cause carrier to flow out. To prevent this, toner is consumed over a long period of time. (It takes about 20 minutes to complete this toner refresh mode).							
3921 001	Bk							
3921 002	All Color							

3922	[OPC Refresh2]	*BCU	 [0 ~ 2 / 1 / 1 /step] 0: Disable (OPC refresh is not executed.) 1: Low coverage (OPC refresh is executed after an output of low coverage ratio.) 2: Every time (OPC refresh is executed after every line.)
	Specifies when the OPC r a temporary 15mm-wide t bias (200V) and turning o Note that this OPC refrest 920 and 3-921.	efresh oner lir n the d h is a s	is executed for CMY drums, which forcibly creates ne on the drum surface by applying the development evelopment clutch at the end of a job. eparate process from the one controlled by SP 3-

3975	[P Ctrl Result] Process Control Self-check Result *BCU [0 to 9999 / - / 1/step]				
	Displays the result of the latest process control self-check.				
	All colors are displayed. The results are displayed in the order "K Y C M"				
	e.g., 1 1 9 1: The self-check for Cyan failed but the others were successful				
	See the troubleshooting section for details.				

SP5-XXX (Mode)

5009	[Langua	ge]	*CTL#	[0 to 16 / 2 / 1/s	step]			
	Selects th	ne language for the	he contro	l panel.				
	Data	Language	Data	Language]			
	0	No language	9	Norwegian				
	1	Japanese	10	Danish				
	2	English	11	Swedish				
	3	American	12	Polish				
	4	French	13	Portuguese				
	5	German	14	Hungarian				
	6	Italian	15	Czech				
	7	Spanish	16	Finnish				
	8 Dutch							
	NOTE: When changing language, the main switch has to be turned off and on to initialize the system.							

5024	mm/inch Display	*CTL	0: mm (Europe/Asia), 1: inch (USA)
	Display units (mm or inch)	for cu	ustom paper sizes.

5045	[Counter Method]	*CTL	[0 or 1 / 1 / -]	
			0: Developments, 1: Prints	
	Selects the counting method if the meter charge mode is enabled with SP5-930-			
	001. You can change the setting only one time.			

				-1	G
5104	[Double Count]	*CTL	[0 or 1 / <u>0</u> / -] 0: Normal count, 1: Double count		onvio.
	Specifies whether the counter is double clicked for A3/DLT size prints.				

5131	[Paper Size]	*BCU			
	• DOM: Japan				
	USA: North America				
	• ERP: Europe				
	The default setting change	es for each area.			

5150	[Bypass Length Setting]	*CTL	[0 or 1 / <u>0</u> / -] 0: OFF, 1: ON	
	Lets or does not let the by-p	he by-pass tray feed extra long paper (up to 1260 mm).		

5302	[Set Time]	*CTL# [-1440 to 1440 / 60 / 1 min./step] Not used					
	Adjusts the RTC (real time	e clock) time setting for the local time zone.					
	Examples: For Japan (+9 GMT), enter 540 (9 hours x 60 min.)						
	NA :-300 (New York)						
	EU :+ 60 (Paris)						
	CH :+480 (Beijing)						
	TW :+480 (Taipei)						
	AS :+480 (Hong Kong)						

5404	[UCodeCtrCir] Use Code Counter Clear
	Clears all counters for users.

5501*	[PM Alarm]	*CTL	[0 to 9999 / <u>0</u> / 1/step]		
			0: Disables the PM alarm		
	Sets the PM alarm level. A PM alarm is made when this condition occurs: PA x				
	1000 = PC, where PA is the value set in SP5-501 and PC is the value in the PM				
	counter. This SP is for use	e with I	NRS.		

5504	[Jam Alarm]	*CTL	[0 to 3 / <u>3</u> / 1/step]
			3: 6K, 2: 3K, 1: 1.5K, 0: Disables the jam alarm
	Sets the jam alarm level. If	f a pap	per jam occurs, the jam alarm counter increases by
	+1. If no paper jam occurs while the set number of paper is output, the jam alarm		
	counter decreases by -1. T	⁻he jar	n alarm occurs when the jam alarm counter gets to
	+10. This SP is for use wit	h NRS	

5505	[Error Alarm]	*CTL	[0 to 255 / <u>50</u> / 1/step] 0: Disables the PM alarm
	Sets the error alarm level. by +1. If no SC code occur counter decreases by -1. T reaches +5. This SP is for	el. If an SC code occurs, the error alarm counter increas curs while the set number of paper is output, the jam ala I. The error alarm occurs when the error alarm counter for use with NRS.	

5507	[Supply Alarm]		
Enables or	disables the supply alarm.		
5507 001	Paper Supply Alarm	*CTL	[0 to 1 / <u>0</u> / 1/step]
5507 002	Staple Supply Alarm	*CTL	0: OFF, 0: ON
5507 003	Toner Supply Alarm	*CTL	
Sets the su	oply alarm level. A supply a	larm co	ounter increases by +1 when a sheet of the related
size is used	. The supply alarm occurs v	when o	one of the supply alarm counters gets to the set
value. This	SP is for use with NRS.		
5507 128	Interval: Others	*CTL	[250 to 10000 / <u>1000</u> / 1/step]

5840	[IEEE 802.11b]		
5840 004	Current SSID	*CTL	
	Enters a unique ID (up to a operating in an area with a	32 cha anothe	racters long) to identify the device when it is r wireless LAN network.

= 0 1 0 0 0 0					
5840 006	Channel Max	*CTL	[1 to 11 or 13 / <u>1</u> / 1 /step]		
			Europe/Asia: 1 to 13		
			USA: 1 to 11		
			Note: Do not change the setting		
	Sets the maximum numbe	r of ch	annels available for data transmission via the		
	wireless LAN. The number of channels available varies according to location. The				
	default settings are set for the maximum end of the range for each area. Adju				
	upper 4 bits to set the max	kimum	number of channels. DFU		
5840 007	Channel Min	*CTL	[1 to 11 or 13 / 1 / 1 /step]		
			Europe/Asia: 1 to 13		
			USA: 1 to 11		
			Note: Do not change the setting		
	Sets the minimum number of channels available for data transmission via t				
	wireless LAN. The numbe	r of cha	annels available varies according to location. The		
	default settings are set for the minimum end of the range for each area. Adjust the				
	lower 4 bits to set the minimum number of channels. DFU				
5840 011	WEP key number	*CTL	[00~11 / 00 / 1 binary]		
	-		00: Key #1		
			01: Key #2 (Reserved)		
			10: Key #3 (Reserved)		
			11: Key #4 (Reserved)		
	Selects the WEP key.				
5840 018	SSID Key Check		Checks that the SSID is correct.		
5840 020	WEP mode	*CTL	[0~1/0/1]		
			0: Max. 64-bit (10 characters)		
			1: Max. 128-bit (10, 26 characters)		
	Determines the operation	mode	of the WEP key. Displayed only when the option		
	801.11b for wireless LAN	is insta	alled.		

5844	[USB]		
5844 001	Transfer Rate	*CTL	Adjusts the USB transfer rate.
			[0 to 1 / <u>0</u> / 1/step]
			0: Auto Change, 1: Full speed
5844 002	Vendor ID	*CTL	Displays the vendor ID. DFU
5844 003	Product ID	*CTL	Displays the product ID. DFU
5844 004	Dev Release Num	*CTL	Displays the development release version
			number. DFU

5845	[Delivery Srv] Delivery Server			
5845 003	Retry Interval	*CTL	[60 to 900 / <u>300</u> / 1 second/step]	
	Specifies the retry interval.			
5845 004	Number of Retries	*CTL	[0 to 99 / <u>3</u> / 1/step]	
	Specifies the maximum number of retries.			

5846	[UCS Setting]		
5845 003	Maximum Entries	*CTL	
	Specifies the number of m	iaximu	m entries.
5845 050	Initialize All Data	*CTL	
	Initializes all data.		

5856	[Remote Update]	*CTL	[0 to 1 / <u>0</u> / 1/step] 0: Disable, 1: Enable
	Allows the technician to up	ograde	the firmware using a parallel cable

5857	[Save Debug Log]						
5857 001	On/Off	*CTL	[0 to 1 / <u>0</u> / 1/step]				
			0: Disabled, 1: Enabled				
	Enables or disables the de	ebug lo	og saving function.				
5857 002	Target	*CTL	[2 to 3 / <u>2</u> / 1/step]				
			2: Hard disk, 3: SD card				
	Sets the storage location f	for the	debug log.				
5857 005 Save to HDD *CTL							
	Sets the key number of the	<u>e debu</u>	ig log.				
5857 006	Save to SD	*CTL					
	Sets the key number of the	e debu	ıg log.				
5857 009	HDD to SD (4MB)	*CTL					
	Copies the most recent 4	MB of	the debug log from the hard disk to the SD card.				
5857 010	HDD to SD (Any)	*CTL					
	Sets the key number of the	e debu	ig log copied from the hard disk to the SD card.				
5857 011	Erase HDD Log	*CTL					
	Deletes the debug log fror	n the h	nard disk.				
5857 012	Erase SD Log	*CTL					
	Deletes the debug log fror	Deletes the debug log from the SD card.					
5857 013	Free Space on SD	*CTL					
	Shows the free space on t	the SD	card.				
5857 014	SD to SD (4MB)	*CTL					
	Copies the most recent 4 MB of the debug log from an SD card to a different SD						
	card.	-					
5857 015	SD to SD (Any)	*CTL					
	Sets the key number of the debug log copied from an SD card to a different SD						
	card.	-					
5857 016	Make HDD Log File	*CTL	Makes a log file on the HDD to save debug logs.				
5857 017	Make SD Log File	*CTL	To save debug logs, the controller makes a log file				
			first, then writes data in the file. This procedure				
			can use much time. The user can switch off the				
			main power switch before the log is written in the				
			file. To prevent this possible problem, you can				
			prepare a log file in advance. If you do this, the				
			controller uses less time to save logs because the

--	-----------	--	--

Enables or disables maximum stack mode for the lower shift tray only in staple mode. If this is enabled, the upper tray can be used for stacking 500 sheets but it stays at the upper exit (will not be used for stapling mode), and the lower tray is used for stacking up to 2,000 sheets. If this is disabled, the upper tray can be used for stacking 500 sheets and the lower tray for 1,500 sheets. **NOTE:** The main switch must be turned off and on to effect the setting change.

5989	[Loop Back Test]	
5989 001	Duplex	Executes a communication test with peripherals
5989 003	Finisher	by using a special tool (connector) which is unique
5989 004	PSU	for each peripheral. The machine checks if the communication with the peripherals is OK or NG; then displays the result. DFU

5990	[SP print mode]	
5990 001	All (Data List)	Does SP5-990-002, 004, 005, 006, and 007.
5990 002	SP (Mode Data List)	Prints an SMC report on all SP modes.
5990 004	Logging	Prints an SMC report on the SPs that save logs.
5990 005	Diagnosis Report	Prints the Self-Diagnosis Report.
5990 006	Non-Default	Prints an SMC report on the SPs that have
		settings which are different from the defaults.
5990 007	NIB Summary	Prints the network configuration report.

5991	[Jam OFF/ON] Jam ON/OFF	[[0 or 1 / <u>0</u> / -] Alphanumeric 0: Enable, 1: Disable
	Enables or disables jam detecti	on.	

5993	[Line Adj.] Line Adjustme	nt			
	Line Positioning Adjustme	nt ([Co	olor])		
	M: Main-scan, S: Sub-scan, Reg.: Registration, Mag.: Magnification				
	For example: M Reg = Ma	in scai	n registration		
5993 001	Mode Selection	Mode Selection *BCU [0 to 2 / 1 / 1/step] Alphanumeric			
			0: Never done		
			1: Done at a) all process control self checks		
			except after toner end recovery and developer		
			initialization, b) new PCU detected, and c) the		
			temperature has changed by 5°C since the last		
			adjustment		
			2: As for setting '1', except it is not done during		
		self-checks. However, it is done at the initial			
		process control self check.			
		The size of the 5°C difference can be changed			
	with SP5-993-3				
	Specifies when the autom	atic lin	e position adjustment is done.		
5993 002	Execute		Use to make a line position adjustment.		
5993 003	Temperature	Temperature *BCU [3 to 15 / <u>5</u> / 1/°C]			
	Specifies the temperature for starting the line positioning adjustment.				
	The line position adjustment automatically starts when the temperature differs by				
	the amount specified in this SP mode from the temperature when the last				
	adjustment was done. The	ere are	two thermistors on the laser optics-housing unit.		
	The thermistor close to the	e fusing	g unit monitors the temperature for this adjustment.		

5000.004							
5993 004	Interrupt	*BCU	[0 or 1 / 1 / -] Alphanumeric				
			U: Disabled, 1: Enabled				
	Enables or disables the line position adjustment during a print job when the						
	temperature differs by the	amoui	nt specified in SP5-993-003 from the temperature at				
	the last adjustment.						
5993 005	Stand-by	BCD	$[0 \text{ or } 1 / \underline{0} / -]$ Alphanumeric				
			0: Disabled, 1: Enabled				
	Enables or disables the lin	ne posi	tion adjustment during stand-by mode when the				
	temperature differs by the	amoui	nt specified in SP5-993-003 from the temperature at				
5000.000	the last adjustment.	*001	10				
5993 006	Job Start	BCO	[0 or 1 / <u>1</u> / -] 0. Disabled 4: Eachlad				
	Enables or disables the lin	ie posi	tion adjustment just before starting a color print job				
	when the temperature diff	ers by	the amount specified in SP5-993-003 from the				
5000 007	temperature when the ma		voke up from energy saver mode.				
5993 007	Result	BU					
	Displays the result of the I	atest II	ne position adjustment in 4 digits.				
	First and second digits: E	rror de	tected on the rear ID sensor				
	Fifth and overh digits:	rror de	tected on the center ID sensor				
	<result></result>						
	01010	1					
	The 6th digit ↑	The 1	1st digit				
	Refer to the Troubleshoot	ing sec	tion for more details about the two-digit codes.				
5993 008	Exe. Counter	*BCU					
	Displays how many times the line position adjustment has been executed.						
	Counts up by +1 normally.						
	After a forced adjustment and a PCU replacement, it counts up +3						
	Also includes adjustments	done	at the factory.				
5993 009	Error Counter	BCD	Displays how many times errors have been				
			detected during the line position adjustment.				
The way the	at the auto line position adju	istmen	t is done can be adjusted using the following SP				
modes (SP:	5-993-010 to 021). These a	re coei	Ticlents used for the adjustment. Normally, do not				
change exc	ept in the automatic adjustr	ient giv	ves poor results immediately after installing a new				
oplics house	fects of the change the value i	inen ac	a forced line position adjustment (SP 5-993-2) to				
Evample: If	magenta is always shifted	ono do	t to the left, reduce 5,003,11 by 1				
5003 010	M Reg [V]		A fine adjustment to the main-scan registration				
5003 011	M Reg. [1]	*BUI	$[-128 \text{ to } 127 / 0 / 1 \text{ dot/sten]} \mathbf{FA}$				
5003 012	M Reg. [M]	*PCU	1 dot = 20u				
5003 012	M Mag [V]	*PCU	A fine adjustment to the main scan magnification				
5002 013		*DCU	A fine augustment to the main-scan magnification. [100 to 100 / 0 / 0 01 %/step] EA				
5993 014		*DCU	NOTE: The setting changes in this SP mode will				
5993 015		БСО	he affect the next line position adjustment				
5003 016		*PUI	Δ fine adjustment to the sub-scen registration for				
5003 017	S Reg. 600[1]	*BU1	each color (color registration)				
5003 012		*801	$[-128 \text{ to } 127 / 0 / 1 \text{ dot/sten}] F\Delta$				
5002 010	S Reg. 1200[V]	*801	1 - 20 + 20 + 20 + 20 + 20 + 20 + 20 + 20				
5002 020	S Reg. 1200[1]	*000	1200 dpi: 1 dot = 20 μ				
5002 024	S Reg. 1200[10]	*000	$1200 \text{ upl. } 1 \text{ uol} = 20 \mu$				
5002 022	S REY. 1200[0]	*00	[10 to 250 / 100 / 10 abouts/stan]				
5993 022	interrupt	BUU	[10 to 200 / <u>100</u> / 10 sneets/step]				

	Specifies the number of s	heets t	o be printed b	pefore a line positio	n adjustment is	
	done during a print job. SI	5-993	3-4 must be e	nabled. When the t	emperature	
	difference meets the cond	litions s	specified in S	P5-993-3, the mach	nine starts counting	
	the number of prints in the	e job. T	he machine i	nterrupts the print jo	ob and does the	
	line position adjustment if	the nu	mber of prints	s exceeds the numb	per specified in this	
	SP mode. If the counted number of prints does not exceed the number specified,					
	the machine resets the counter, then continues to monitor the temperature and does					
	the line position adjustment next time.					
5993 024	Mscan Lgth Det ¹ BCU [60 to 990 / <u>130</u> / 10 sec/step]					
	Performs the main scan length detection when the polygon motor has operated					
	consecutively for the time	specifi	ed in this SP	mode.		
5993 025	Drm Gear Phase	*BCU	[0 to 345 / <u>0</u>	/ 15 degrees/step]	DFU	
	Adjusts the phases of the	black of	drum gear and	d the color drum ge	ar.	
5993 026	Initialization	*BCU	[0 to 1 / <u>1</u> / 0)/step]		
			0: Disable, 1	I: Enable		
	Enables or disables the lir	ne posi	tion adjustme	ent during initialization	on.	
5993 027	Toner Refresh	*BCU	[0 to 1 / <u>1</u> / 1	I/step]		
			0: Disable, 1	I: Enable		
	Enables or disables the to	oner ref	reshing opera	ation. Repetitive line	e position	
	adjustments can cause at	onorma	I outputs sucl	h as white spots. To	o prevent this, toner	
	is consumed and supplied	l after l	ine position a	djustment.		
5993 031	PPS: M		Checks the	transfer PPS in the	162-mm/s mode.	
			Use this SP	only as explained i	n section 4.4.3.	
5993 032	PPS Set: M	*BCU	[6043 to 616	6 / 6105 / 1 step]		
	Adjusts the transfer PPS i	n the 1	25-mm/s mo	de. Use this SP onl	y as explained in	
	section 4.4.3.	1				
5993 033	PPS: L		Checks the	transfer PPS in the	62.5-mm/s mode.	
			Use this SP	only as explained i	n section 4.4.3.	
5993 034	PPS Set: L	*BCU	[6043 to 616	6 / 6105 / 1 step]		
	Adjusts the transfer PPS i	n the 6	62.5-mm/s mo	de. Use this SP on	ly as explained in	
	section 4.4.3.		· · · · · · · · ·		_	
5993 035	Color Adj Level	*BCU	[LOW, MID,	HIGH / <u>MID</u> / - /ste	p]	
	Specifies the level of color	r adjus	tment. This S	P sets the following	SPs as listed.	
	HI		MID	LOW		
	SP3-906-001 200		200	999		
	SP3-906-002 200		0	0		
	SP3-906-003 0		0	0		
	SP3 006 004 480		480	480		
	SI 3-300-004 400		400	400		
	<u>SP3-906-005</u> 1.00		1.00	1.00		
	This SP controls how ofte	n the a	utomatic line	position adjustmen	t is done. For the	
	most accurate machine or	peratio	n, set it to HIC	H. If the user says	that this	
	adjustment is done too off	en, wh	ich uses too i	much time, set it to	MID or LOW (less	
	accurate operation but les	s time	usea).			

5994	[Unit Set] Maintenance Unit Detection ON/OFF				
5994 001	Dev/PCU	*BCU# [0 or 1 / 0 / -] Alphanumeric			
		0: Enable, 1: Disable			
	Enables or disables PCU and development unit detection.				
	NOTE: If this mode is disabled, new unit detection also does not function. Use this				
	mode as a temporary measure, only when the micro-switches are defective.				
5994 002	Oil Unit	*BCU#	[0 or 1 / <u>0</u> / -] Alphanumeric		
			0: Enable, 1: Disable		

٦

This is for the oil supply unit only, and not the fusing unit NOTE: Use this mode as a temporary measure, only when the unit detection mechanism is defective.

5995	[ColorGapAdj2] Color Gap Adjustment 2	*BCU	[0 or 1 / <u>0</u> / -] 0: Enabled, 1: Disabled
	Enables or disables the transfer belt feedba in section 4.4.3.	ck feature	e. Use this SP only as explained

5997	[Test Pattern]	
5997 001	IntTrav	Selects the trav for making a test print.
		[0 to 4 / 1 / 1/step]
		0: By-pass Table 1: Tray 1
		2. Tray 2 3. Tray 3
		4. Tray 4
		NOTE: The machine makes a test pattern on the
		paper size loaded in the selected paper trav
5997 002	Pattern	Selects a test pattern
0007 002		[0 to 23 / 0 / 1/step]
		0: None
		1: 1-dot sub-scan line
		2: 2-dot sub-scan line
		3: 1-dot main-scan line
		4 [·] 2-dot main-scan line
		5: 1-dot grid pattern (fine)
		6: 2-dot grid pattern (fine)
		7 1-dot grid pattern (rough)
		8 2-dot grid pattern (rough)
		9. 1-dot slant grid pattern
		10, 2-dot slant grid pattern
		11. 1-dot pattern
		12 2-dot pattern
		13. 4-dot pattern
		14. 1-dot trimming pattern
		15. 2-dot trimming pattern
		16. Cross stitch: sub-scan
		17. Cross stitch: main-scan
		18. Belt pattern
		19. Belt pattern (vertical)
		20. Checkered Flag
		21. Grev scale (vertical)
		22. Grey scale (Horizontal)
		23. Solid
5997 003	Color	Selects the color for making a test pattern.
		[0 to 6 / 6 / 1/step] Alphanumeric
		0: Red 1: Green
		2: Blue 3: Yellow
		4: Magenta 5: Cyan
		6: Black
5997 004	Mode	Selects the color mode for making a test print.
		[0 or 1 / 0 / 1/step] Alphanumeric
		0: Full Color 1: Single Color

5997 005	Resolution	Selects the resolution for making a test print. [0 to $2 / \frac{1}{2} / 1$ /step] Alphanumeric 0: 600x600 1: 1200x600 2: 1200x1200
5997 006	MLT Paper Size	Selects the paper size for making a test patternfrom the by-pass table. $[0 \text{ to } 3 / 0 / 1/\text{step}]$ Alphanumeric $0: A4 LEF$ $2: A3$ $3: DLT$
5997 007	Print Exe	Prints the test pattern with the settings specified with SP5-997-001 to 006. NOTE: When exiting the SP mode, the test print mode is automatically canceled.

5998	[Memory Clear 2] (5.3	.2)	
5998 001	ENG Setting		Clears the engine settings except for counters.
5998 002	ENG Counter		Clears all counters.

SP6-XXX (Peripherals)

6110	[Punch]				
	Adjusts th	Adjusts the punching position.			
	Punch 1	US: 2 punch hol	es		
		Europe: 2 punch	n holes		
		North Europe: 4	punch h	noles	
	Punch 2	US: 3 punch holes			
		Europe: 4 punch	n holes		
	Increment	Holes move toward the paper center.			
	Decremer	nt: Holes move tov	vard the	paper edge.	
6110 001	MF Fin 1		*BCU	[-7.5 to 7.5 / <u>0</u> / 0.5 mm/step]	
6110 002	MF Fin 2		*BCU		
6110 003	Booklet Fi	n		[-2.5 to 7.5 / <u>0</u> / 0.5 mm/step]	

6111	[Staple Position]						
	Adjusts the stapling position.						
	Increment: Staple position moves toward the edge of paper.						
	Decrement: Staple position	moves t	oward the center of paper.				
	NOTE: Although the adjustable range is ± 3.5 mm, the stapling position can be changed only by 1.0 mm when stapling one position at the front or rear side even						
	when the input value is more	e than 1	.0.				
6111 001	MF Fin	*BCU	[-3.5 to 3.5 / <u>0</u> / 0.5 mm/step]				
6111 002	Booklet Fin		[-3.75 to 3.75 / 0. / 0.25 mm/step]

7803 036	I onerSupply[M]	*BCU			
7803 037	I onerSupply[C]	*BCU			

Displays the value given by the following formula:

(Current revolution \div Target revolution) \times 100, where "Current revolution" is the current value for the counter of the part, and "Target revolution" is the values of SP7-803-17 through 27. This shows how much of the unit's expected lifetime has been used up.

The R% counter is based on rotations, not prints. If the number of rotations reaches the limit, the machine enters the end condition for that unit. If the print count lifetime is reached first, the machine also enters the end condition, even though the R% counter is still less than 100%. Oil supply unit: When the R% counter reaches 100%, it enters the near-end condition, not the end condition. The end condition occurs some number of rotations after this (not adjustable). **NOTE:** The machine internally adjusts or compensates as necessary, depending on conditions of machine usage. Due to this, at the oil supply unit near-end condition, the R% counter of the oil supply unit can be 100%, lower than 100%, or higher than 100%.

7807	[SC/Jam Clear] SC/Jam Counter Clear
	Clears the counters related to SC codes and paper jams.

7808	[Counter Clear] (5.3.2)	
	Clears all counters.	

7832	[Diag. Result] Diagnostic Result	*CTL	
	Displays the result of the diagnostics	s. To sc	roll the return codes, press the up-arrow
	key or the down-arrow key.		

7833 [C	Coverage] Pixel Coverag	je Rati	0		
Displays the in	nage coverage ratio for e	ach cc	olor of the last output. This SP mode displays the		
"coverage ratio	o" of the output, i.e. the ra	atio of f	the total pixel area of the image data to the total		
printable area	on the paper. Note that the	his valı	ue is not directly proportional to the amount of toner		
consumed, alth	hough of course it is one	factor	that affects this amount. The other major factors		
involved includ	le: the type, total image a	area ar	nd image density of the original, toner concentration		
and developer	potential.				
7833 001 La	ast [K]	*BCU	[0 to 100.00 / - / 0.01 %/step]		
7833 002 La	ast [C]	*BCU			
7833 003 La	ast [M]	*BCU			
7833 004 La	ast [Y]	*BCU			
Displays accur	mulated average value of	f image	e coverage ratio for each color.		
SP7-833-005 t	<u>to 008 vs SP8-831-001 to</u>	<u>) 004</u>	-		
The averages	for K (SP7-833-005 and	SP8-8	31-001) are the same.		
For CMY, SP8-831 does not include black-and-white pages in the middle of a color job. However,					
SP7-833 does include these pages in the average. As a result, the readings of SP7-833 will be					
lower, because	lower, because these averages include pages for which there is zero for CMY, but the averages				
calculated for S	<u>SP8-831 do not include t</u>	<u>hese p</u>	ages.		
7833 005 A	verage [K]	*BCU	[0 to 100.00 / - / 0.01 %/step]		
7833 006 A	verage [C]	*BCU			
7833 007 A	verage [M]	*BCU			
7833 008 A	verage [Y]	*BCU			
Displays the total number of toner cartridges replaced.					
SP7-833-011 to 014 are same as SP7-908-5 to 8.					
7833 011 T	oner [K]	*BCU	[0 to 65535 / - / 1 cartridge/step]		
7833 012 T	oner [C]	*BCU			
7833 013 To	oner [M]	*BCU			
7833 014 T	oner [Y]	*BCU			

7834	[Coverage Clear]	
7834 001	Average	Resets the average coverage counters.
7834 002	Toner	Resets the toner cartridge counters.
7834 003	S: PREV Toner	Resets the sheet counters of the previous cartridges. The sheet counters count the number of sheets printed with a toner cartridge.
7834 004	S: Coverage 0-100	Resets the coverage counters.
7834 255	All	Executes SP7-834-001 through 004.

7836	[Total Memory Size]
	Shows the total storage size.

7901	[Assert Info]	
7901 001	File Name	Records the location where a problem is detected
7901 002	# of Lines	in the program. The data stored in this SP is used
7901 003	Location	for problem analysis. DFU

7905	[Alert Display]		
7905 010	Wst Oil: Full	*BCU	[232 to 464 / 232 / 1 kilo-revolutions/step]
	Specifies the number of re	evolutio	ons the development drive motor-K can make after
	the message, "Waste Oil E	Bottle i	s Almost Full", is displayed. The machine stops
	after the motor has made	the spe	ecified number of revolutions.
	This SP specifies the inter	val fro	m near end to end for the waste oil bottle. 232k
	revolutions equals 2.5k pr	ints. If	it is set to 464, the end condition is 5.0k prints after
	near end.	-	
7905 014	Oil: Alert: Page	*BCU	[25.0 to 27.5 / 27.5 / 0.1 kilo-sheets/step]
	Specifies the number of sl	neets t	he machine can output after the oil supply reaches
	the near-end condition.		
7905 023	PCU: Black	*BCU	Shows the number of sheets that causes an alert
7905 024	PCU: Color	*BCU	(50K sheets [not adjustable]). DFU
7905 025	DEV: Black	*BCU	Shows the number of sheets that causes an alert
7905 026	DEV: Color	*BCU	(100K sheets [not adjustable]). DFU

SP8-XXX (Data Log 2)

The counters in Data Log 2 are commonly used by multiple machines. Data Log 2 includes the counters of the functions or units that are not supported by Model J-P3. The counters in Data Log 2 are cleared by SP5-801 (Memory Clear) or SP7-808 (Counter Reset).

Keys and abbreviations in Data Log 2

• Program-related keys and abbreviations

- T: the grand total of the counters of all application programs
- C: the counter of the copier application program excluding the events related to the document server
- F: the counter of the facsimile application program excluding the events related to the document server
- P: the counter of the printer application program excluding the events related to the document server
- S: the counter of the scanner application program excluding the events related to the document server
- L: the counter of the document server (local storage)
- O: the counter of other application programs including remote application programs

• Program-independent keys and abbreviations

/	by ("T:Jobs/Apl" means the total Jobs by Application.)
>	or more ("2>" means two or more.)
AddBook	address book
Apl	application program
B/W	black & white
Bk	black
С	cyan
ColCr	color create
ColMode	color mode
Comb	combine
Comp	compression
Deliv	delivery
DesApl	designated application program (The designated application program is the
	application program that stores the data or information on the document server,
	for example.)
Dev Counter	development count; the number of pages developed
Dup, Duplex	duplex printing
Emul	emulation
FC	full color
FIN	finish, post-print processing
Full Bleed	without margin
GenCopy	generation copy
GPC	get print counter (The get print counter starts counting when the number of
	processed pages exceeds 10. For example, when 12 pages are processed, the
	get print counter shows 2.)
IFax	Internet fax
ImgEdt	image editing performed on the original with the copier GUI (Image editing
	includes, for example, border removal, adding stamps, and page numbering.)
K	black in the YMCK mode
LS	local storage; document server
LSize	large size
Mag	magnification
MC	one color

NRS	new remote service; NRS
Org	original for scanning
OrgJam	original jam
Palm 2	Print Job Manager/Desk Top Editor (A pair of utility programs that distribute print jobs evenly among the printers on the network and processes files.)
PC	personal computer
PGS	pages (Duplex printing is counted as two. A3/DLT simplex is counted as two if the A3/DLT double-count program is validated.)
PJob	print job
Ppr	paper
PrtJam	printer (plotter) jam
PrtPGS	print pages
R	red toner remaining (Currently, no machine supports this function.)
Rez	resolution
SC	service condition code; SC code
Scn	scan
Sim, Simplex	simplex, printing on one side.
S-to-Email	scan-to-e-mail
SMC	SMC report printed by SP5-990
Svr	server
TonEnd	toner end
TonSave	toner save
TXJob	send, transmission
YMC	yellow, magenta, and cyan
YMCK	yellow, magenta, cyan, and black

8001	T:Total Jobs	*CTL	The number of times the application program starts a
8004	P: Total Jobs	*CTL	job
8007	O: Total Jobs	*CTL	[0~9999999/ 0 / 1]

• The jobs interrupted by paper jams or some other errors are also counted.

- The jobs executed by SPs are not counted.
- When using secure printing (when a password is required to start the print job), the job is counted at the time when either "Delete Data" or "Specify Output" is specified.
- When the user prints a report (user code list, for example), the O: counter increments.

8021	T: Pjob/LS	*CTL	The number of times the application program stores
8024	P: Pjob/LS	*CTL	data on the document server
8027	O: Pjob/LS	*CTL	[0~9999999/ 0 / 1]

• When images stored on the document server by a network application (including Palm 2), are printed with another application, the O: counter increments.

8031	T: Pjob/DesApl	*CTL	The number of times the application program
8034	P: Pjob/DesApl	*CTL	retrieves data from the document server
8037	O: Pjob/DesApl	*CTL	[0~9999999/ 0 / 1]

• When documents already stored on the document server are printed, the counter of the application program that executes the print job increases.

8061	T: FIN Jobs	*CTL	The number of times the application program uses		
8064	P: FIN Jobs	*CTL	the finisher		
8067	O: FIN Jobs	*CTL	[0~9999999/ 0 / 1]		
001	Sort	The nu mode	mber of times the application program starts the sort		
002	Stack	The nu mode	mber of times the application program starts the tack		
003	Staple	The nu mode	The number of times the application program starts the staple mode		
004	Booklet	The number of times the application program starts the booklet mode NOTE: The counter of the staple mode (003) can also increase.			
005	Z-Fold	The number of times the application program starts the Z-fold mode NOTE: The booklet mode is not included.			
006	Punch	The number of times the application program starts the punch mode NOTE: The counter of the printer application program (P:) can also increase.			
007	Other	(Reser	(Reserved)		

8071	T: Jobs/PGS	*CTL The r		The number of jobs that try to output a specific	
8074	P: Jobs/PGS	*CTL	number of pages		6
8077	O: Jobs/PGS	*CTL	[0~99	999999/ 0 /	1]
001	1 Page			008	21~50 Pages
002	2 Pages			009	51~100 Pages
003	3 Pages			010	101~300 Pages
004	4 Pages			011	301~500 Pages
005	5 Pages			012	501~700 Pages
006	6~10 Pages			013	701~1000 Pages
007	11~20 Pages			014	1001~ Pages

Service Tables

• The jobs interrupted by paper jams or some other errors are also counted.

- If a job is suspended and restarted later, the job is seen as one job.
- If the finisher runs out of staples during stapling, the job is counted at the time the error occurs.
- The first test print and subsequent test prints to adjust settings are added to the number of pages of the copy job (SP 8072).

ENGINE SERVICE MODE

8381	T: Total PrtPGS	*CTL	The number of sheets that the application program
8384	P: Total PrtPGS	*CTL	tries to print (excluding the pages printed in the SP
8387	O: Total PrtPGS	*CTL	mode) [0~9999999/ 0 / 1]

- A3/DLT simplex is counted as two if the A3/DLT double-count program is validated.
- The following pages are not counted as printed pages:
 - Blank pages in a duplex printing job
 - Blank pages inserted as document covers, chapter title sheets, and slip sheets
 - Reports printed to confirm counts
 - All reports done in the service mode (service summaries, engine maintenance reports, etc.)
 - Test prints for machine image adjustment
 - Error notification reports
 - Partially printed pages as the result of a copier jam

8391	LSize PrtPGS	*CTL	The number of sheets printed on A3/DLT and larger
			sizes
			[0~9999999/ 0 / 1]

8411	Prints/Duplex	*CTL	The number of sheets used in duplex printing
			[0~9999999/ 0 / 1]

• The counter increases by +1 when both sides (front/back) are printed. The counter does not increase when one of the two sides is not printed (e.g., the last page of the documents that have three pages, five pages, seven pages, and so on).

8 421	T: PrtPGS/Dup Comb	*CTL	The number of sheets used in binding and combining [0~99999999/ 0 / 1]		
8 424	P: PrtPGS/Dup Comb	*CTL			
8 427	O: PrtPGS/Dup Comb	*CTL			
001	Simplex> Duplex				
004	Simplex Combine				
005	Duplex Combine				
006	2>	2 pages on 1 side (2-Up)			
007	4>	4 pages on 1 side (4-Up)			
008	6>	6 pages on 1 side (6-Up)			
009	8>	8 page	s on 1 side (8-Up)		
010	9>	9 pages on 1 side (9-Up)			
011	16>	16 pag	es on 1 side (16-Up)		
012	Booklet				
013	Magazine				

- These counters are useful for the users who want to know how much paper they have saved.
- Partially printed sheets are also counted as 1 page (e.g, the last page in the 4-Up mode is only partially printed when the documents have 5, 6, or 7 pages, 9, 10, or 11 pages, 13, 14, or 15 pages, and so on.).
- Here is a summary of how the counters work in the booklet and magazine modes.

Boo	klet	Mag	azine
Original Pages	Count	Original Pages	Count
1	1	1	1
2	2	2	2
3	2	3	2
4	2	4	2
5	3	5	4
6	4	6	4
7	4	7	4
8	4	8	4

0424	T: DrtDCS/ImaEdt	*CTI	The number of neares that the application prearem

ENGINE SERVICE MODE

8441	T: PrtPGS/Ppr Size	*CTL	The r	The number of sheets of a specific paper size that	
8444	P: PrtPGS/Ppr Size	*CTL	the application program uses		
8447	O: PrtPGS/Ppr Size	*CTL	[0~9999999/ 0 / 1]		
001	A3			007	LG
002	A4			008	LT
003	A5			009	HLT
004	B4			010	Full Bleed
005	B5			254	Other (Standard)
006	DLT			255	Other (Custom)

• These counters do not distinguish between LEF and SEF.

8451	PrtPGS/Ppr Tray	*CTL The number of sheets fed from a specific tray			
		[0~9999999/ 0 / 1]			
001	Bypass	Bypass Tray			
002	Tray 1	Copier			
003	Tray 2	Copier			
004	Tray 3	Paper Tray Unit/LCT (Optional)			
005	Tray 4	Paper Tray Unit (Optional)			
006	Tray 5	(Not used)			
007	Tray 6	(Not used)			
008	Tray 7	(Not used)			
009	Tray 8	(Not used)			
010	Tray 9	(Not used)			

8461	T: PrtPGS/Ppr Type	PrtPGS/Ppr Type *CTL T		The number of sheets of specific paper types		
8464	P: PrtPGS/Ppr Type	*CTL [0~99		[0~9999999/ 0 / 1]		
001	Normal			005	Normal (Back)	
002	Recycled			006	Thick (Back)	
003	Special			007	OHP	
004	Thick			008	Other	

- These counters increase when the paper is output. On the other hand, the PM counter increases (to measure the service life of each feed roller) when the paper is fed.
- Blank sheets (covers, chapter covers, slip sheets) are also counted.
- During duplex printing, a sheet printed on two sides and a sheet printed on one side are both counted as 1.

8471	PrtPGS/Mag	*CTL	The r [0~99	number of p 999999/ 0 /	ages magnified or reduced 1]
001	~49%			004	101%~200%
002	50%~99%			005	201% ~
003	100%				

- Some application programs (on the computer) can specify the magnification setting of the printer driver (e.g., MS Excel). In a case like this, SP8-471 recognizes the setting and increases the corresponding counter. Other application programs can magnify or reduce the print images on their own. In a case like this, SP8-471 does not recognize the magnification setting of the application programs and increase the counter of 100%.
- Magnification adjustment conducted on the document server is not counted.
- Blank cover sheets and slip sheets are regarded as 100%.

8481	T: PrtPGS/TonSave	*CTL	The number of pages printed with the toner save
8484	P: PrtPGS/TonSave	*CTL	feature activated
			[0~9999999/ 0 / 1]

• These counters display the same result.

8501	T: PrtPGS/Col Mode	*CTL	The number of pages printed in a specific color mo			
8504	P: PrtPGS/Col Mode	*CTL	[0~9999999/ 0 / 1]			
001	B/W			003	Full Color	
002	Single Color

004	R98			011	PCL XL	
005	R16			012	IPDL-C	
006	GL/GL2			013	BM-Links (for local models only)	
007	R55			014	Other	

• These counters display the same result.

ENGINE SERVICE MODE

8521	T: PrtPGS/FIN	*CTL	The I [0~99	The number of pages processed by the finisher [0~9999999/ 0 / 1]		
8524	P: PrtPGS/FIN	*CTL	[0~99	[0~9999999/ 0 / 1]		
001	Sort			005	Z-Fold	
002	Stack	Stack			Punch	
003	Staple			007	Other	
004	Booklet					

- Even if the pages are too many for the finisher to staple, all pages are counted (including unstapled pages).
- The counter of stapling (003) increases by +1 when the paper is transported from the printer to the tray of the finisher. Even if a paper jam occurs on this path, the counter (003) increases. If the same job is retried, the counter (003) increases once again.

8531	Staples	*CTL	The number of staples			
			[0~9999999/ 0 / 1]			

8581	T: Counter	*CTL	The number of outputs in a specific color mode [0~9999999/ 0 / 1]		
001	Total			007	Copy: B/W
002	Total: Full Color			008	Print: Color
003	B&W/Single Color			009	Print: B/W
004	Development: CMY			010	Total: Color
005	Development: K			011	Total: B/W
006	Copy: Color				

8584	P: Counter	*CTL	The r [0~99	number of c 999999/ 0 /	outputs in a specific color mode 1]
001	B/W			003	Full Color
002	Single Color				

8591	O: Counter	*CTL	The r [0~99	number of A3/DLT, duplex printing, or staples		
001	A3/DLT			003	Staple	
002	Duplex					

• Note that these counters are not for the printer application program.

8771	Dev Counter	*CTL	The r [0~99	ne number of rotations of the development rollers ~99999999/ 0 / 1]	
001	Total	1		004	M
002	К			005	С
003	Y				

8781	Toner Botol Info.	*BCU	The r repla [0~99	The number of toner bottles (cartridges) already replaced [0~9999999/ 0 / 1]			
001	Toner [BK]			003	Toner [M]		
002	Toner [Y]			004	Toner [C]		

• SP7-833-011 through 014 and SP8-781-001 through 004 display the same results.

8801	Toner Remain	*CTL	The p [0~10	percentage of the remaining toner 00/ 0 / 1]		
001	К			003	Μ	
002	Y			004	С	

8831	Coverage	*BCU	The a [0~10	average cov 00/ 0 / 1]	/erage
001	Average [BK]			003	Average [M]
002	Average [Y]			004	Average [C]

- SP8-831 displays the image coverage ratio for each color of the last output. This SP mode displays the coverage ratio of the output, i.e. the ratio of the total pixel area of the image data to the total printable area on the paper. Note that this value is not directly proportional to the amount of toner consumed, although of course it is one factor that affects this amount. The other major factors involved include: the type, total image area and image density of the original, toner concentration and developer potential.
- SP8-831-001 through 004 and SP7-833-005 through 008 display the same results.

8841	Coverage	*BCU	The 0 [0~10	coverage of 00/ 0 / 1]	the latest print
001	Last [BK]			003	Last [M]
002	Last [Y]			004	Last [C]

• SP8-841-001 through 004 and SP7-833-001 through 004 display the same results.

8851	Coverage: 0-10%	*BCU	The number of scanned sheets of a specific coverage			
8861	Coverage: 11-20%	*BCU	ratio			
8871	Coverage: 21-30%	*BCU	[0~9999999/ 0 / 1]			
8881	Coverage: 31%-	*BCU				
001	S: BK			003	S: M	
002	S: Y			004	S: C	

• For example, SP8-851-001 displays the number of scanned sheets whose blackcoverage ratio is 0 percent through 10 percent. SP8-881-004 displays the number of scanned sheets whose cyan-coverage ratio is 31 percent or higher.

ENGINE SERVICE MODE

8891	PM Counter	*BCU	The r applie [0~99	The number of sheets output by the scanner application program [0~99999999/ 0 / 1]

5.3.5 TEST PATTERN (SP5-997)

G106S904.WMF

5.4 FIRMWARE UPDATE

5.4.1 TYPE OF FIRMWARE

The table lists the programs used by Model J-P3.

Type of firmware	Function	Location of firmware	Message displayed
Engine - Main	Printer engine control	BCU flash ROM	Engine
Engine - MUSIC	Line position adjustment	BCU MUSIC CPU	Music
System	Printer system management	Controller flash ROM	Onboard Sys
Printer Application	Feature application	SD card	Onboard Prn-4
NIB	NIB management	SD card	Network Support
Web System	Web service application	SD card	Web Support

5.4.2 PRECAUTIONS

Handling SD Cards

Observe the following precautions when handling SD cards:

- Turn off the main power switch before you insert or remove an SD card. Data in the SD card can be corrupted if you insert or remove an SD card while the main power switch is on.
- Do not turn off the main power switch during downloading.
- Keep SD cards in a safe location. Do not store SD cards in these locations:
 - Locations exposed to high temperature, high humidity, direct sunlight, or strong vibration
 - Locations where there are effects from magnetic forces
- Do not bend or scratch SD cards.
- Do not drop SD cards or expose them to shock or vibration.

NOTE: For the arrangement of files in SD cards, see 5.4.3.

Upload or Download

In this section (5.4), 'upload' and 'download' have these meanings:

- Upload: To copy data from the printer to the SD card
- Download: To copy data from the SD card to the printer

Network Connection

Before you start, tell the user that they cannot use the printer during firmware update, and that they must disconnect the printer physically from the network. If a print job comes in, this can cause problems with the firmware update.

Service Tables

5.4.3 FILE ARRANGEMENT

How the Program Works

The firmware-update program of Model J-P3 searches the folder *romdata* for necessary firmware. When you save the firmware in a SD card, make the folder *romdata*. You must not make the folder *romdata* in another folder; but you can make more than one folder in the folder *romdata*. The firmware-update program searches all folders if they are in *romdata*.

Each firmware program contains the file information. Before downloading the firmware from an SD card, the firmware-update program reads the file information. The firmware is downloaded only when the file information is correct.

NOTE: The file information can identify the firmware, but this information does not guarantee that the data is not corrupted.

Example

When you save the firmware, we recommend that you arrange folders and files as follows:

- In the folder *romdata,* make another folder and use this folder exclusively for one model. Use the machine code as the name of this folder.
- When you save the firmware of a different model, make a new folder in the folder romdata. Give it a name as mentioned above. (The diagram shows an example. The folder romdata has three sub-folders: B130, B149, and G106. Each folder is for one model.)
- When you save some files other than firmware, make a new folder outside romdata. Save the files in this folder. Do not save any file outside the folders. (The diagram shows an example. Three folders, log, nvramdata, and prt, are outside romdata. These folders can store debug logs, NVRAM data, and captured files respectively.)

G106S902.WMF

5.4.4 UPDATING

Procedure

Ę

- 1. Turn off the main power switch.
- 2. Disconnect the printer from the network (☞ 5.4.2).
- Remove the slot cover [A] from slot 1 (
 ^β x 1).
- 4. Turn the SD card face [B] to the rear side of the printer, and insert it into slot 1.
- 5. Slowly push the SD card into the slot until it clicks.
- 6. Make sure that the SD card is locked in place.

NOTE: To remove the SD card, push it in until it clicks and release it sl

G106S901.WMF

Service Tables

- in until it clicks, and release it slowly. The slot pushes out the SD card.
- 7. Turn on the main power switch.
- 8. Wait until a firmware name is shown on the display (about 45 seconds).

NOTE: The firmware name is read from inside the firmware. The firmware name is not changed even if you change the file name on your PC.

 If the necessary firmware name is shown on the display, go to the next step. To use a different firmware, push the up-arrow key or the down-arrow key to find the necessary firmware.

- 10. To select the firmware, push the enter key. Make sure that a star (*) is added to the firmware name.
- 11. If you update more than one firmware program at the same time, find each of them and select each of them. Make sure a star is added to each firmware name.
 - 12. To select "Execute, " push the up-arrow key or the down-arrow key.

- 13. To start firmware update, push the enter key. While each firmware is downloaded, the underscores on the operation panel are replaced by stars.
- 14. Wait until the message "Updated" is shown.
- 15. Turn off the main power switch.
- 16. Remove the SD card from the slot.
- 17. Attach the slot cover ($\hat{P} \times 1$).
- 18. Connect the printer to the network physically.
- 19. Turn on the main power switch.
- 20. Print the Configuration Page to check that the every firmware is correctly updated: Menu > List/Test Print > Config.P/Er.Log

Error Handling

An error code is shown if an error occurs during the download. Error codes have the letter "E" and a number. If an error occurs, the firmware is not correctly downloaded; see the error code table (5.4.6) and do the necessary steps. After this, download the firmware again.

Power Failure

If firmware update is interrupted by power failure, the firmware is not correctly downloaded. In this condition, machine operation is not guaranteed. You have to download the firmware again.

5.4.5 NVRAM DATA UPLOAD/DOWNLOAD

Turn off the main power switch before you insert or remove an SD card. Make sure that the controller and the BCU are correctly connected.

Uploading NVRAM Data

Copy the data from the NVRAM to an SD card (referred to as "to upload NVRAM data" in this section) before you replace the NVRAM. If you cannot upload NVRAM data, manually input the necessary settings after you replace the NVRAM.

- 1. Start the SP mode.
- 2. Select SP5-990-001 (ALL (Data List)).
- 3. Do the SP.
- See if the SMC Report is correctly output.
 NOTE: You may need the SMC Report when the machine did not complete an NVRAM data upload or download (

 Downloading NVRAM Data) correctly.
- 5. Go out of the SP mode.
- 6. Turn off the main power switch.
- 7. Insert an SD card into slot 1.
- 8. Turn on the main power switch.
- 9. Start the SP mode.
- 10. Select SP5-824 (NVRAM Upload).
- 11. Push the enter key. The upload starts.

When uploading ends correctly, the following file is made:

NVRAM\serial_number.NV

where "NVRAM" is the folder name in the SD card and "serial_number.NV" is the file name with the extension ".NV". The serial number of the printer is used as the file name. For example, if the serial number is G1060017, the file name is "G1060017.NV".

- 12. Go out of the SP mode.
- 13. Turn off the main power switch.
- 14. Remove the SD card.
- Mark the SD card with, for example, the machine code. You need this SD card when you download NVRAM data (
 Downloading NVRAM Data).
 NOTE: One SD card can store the NVRAM data from two or more machines.

Downloading NVRAM Data

Copy the data from the SD card to the NVRAM (referred to as "to download NVRAM data" in this section) after you replace the NVRAM. If you cannot download NVRAM data, manually input the necessary settings.

- 1. Make sure that the main power switch is off. If it is on, turn it off.
- 2. Make sure that you have the correct SD card that contains the necessary NVRAM data.
- 3. Insert the SD card into slot 1.
- 4. Turn on the main power switch.
- 5. Start the SP mode.
- 6. Select SP5-825 (NVRAM Download).
- 8. Go out of the SP mode.
- 9. Turn off the main power switch.
- 10. Remove the SD card.
- 11. Turn on the main power switch.
- 12. Check that the NVRAM data is correctly downloaded.

This procedure does not download the following data to the NVRAM:

- Total Count
- Machine's Device Number

5.4.6 ERROR CODE TABLE

These error codes are used by more than one model. Some codes are not used by Model J-P3.

Code	Cause	Solution
20	Cannot map logical address	Make sure SD card inserted correctly, or use another SD card.
21	Cannot access memory	HDD connection incorrect or replace hard disks.
22	Cannot decompress compressed data	Incorrect ROM data on the SD card, or data is corrupted.
23	Error occurred when ROM update program started	Controller program abnormal. If the second attempt fails, replace controller board.
24	SD card access error	Make sure SD card inserted correctly, or use another SD card.
30	No HDD available for stamp data download	HDD connection incorrect or replace hard disks.
31	Data incorrect for continuous download	Insert the SD card with the remaining data required for the download, the re-start the procedure.
32	Data incorrect after download interrupted	Execute the recovery procedure for the intended module download, then repeat the installation procedure.
33	Incorrect SD card version	Incorrect ROM data on the SD card, or data is corrupted.
34	Module mismatch - Correct module is not on the SD card)	SD update data is incorrect. Acquire the correct data (Japan, Overseas, OEM, etc.) then install again.
35	Module mismatch – Module on SD card is not for this machine	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.
36	Cannot write module – Cause other than E34, E35	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.
40	Engine module download failed	Replace the update data for the module on the SD card and try again, or replace the BCU board.
42	Operation panel module download failed	Replace the update data for the module on the SD card and try again, or replace the LCDC.
43	Stamp data module download failed	Replace the update data for the module on the SD card and try again, or replace the hard disks.
44	Controller module download failed	Replace the update data for the module on the SD card and tray again, or replace controller board.
50	Electronic confirmation check failed	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.

5.5 SD CARD APPLI MOVE

5.5.1 OVERVIEW

The service program "SD Card Appli Move" (SP5-873) enables you to copy application programs from an SD card to another SD card.

There are three SD card slots. Model J-P3 can use slot 2 and slot 3 to store application programs. Slot 1 is for maintenance work only. Because of this, if the application programs are stored in three SD cards or more, ① choose one SD card or two from these SD cards and ② store all the application programs on these one or two cards.

Use extreme caution when using SD Card Appli Move:

- 1. The authentication data is transferred with the application program from an SD card to the other SD card. Authentication fails if you try to use the SD card after you copy the application program from this card to another SD card.
- 2. Do not use an SD card if it has been used for some other work, for example, on a computer. Normal operation is not guaranteed when such SD card is used.
- 3. Keep the SD card in a safe place after you copy the application program from the card to another card. This is because: ① The SD card can be the only proof that the user is licensed to use the application program. ② You may need to check the SD card and its data to solve a problem in the future.
- 4. You cannot copy PostScript data to another SD card. You can copy an application program to the SD card that stores PostScript data.

5.5.2 MOVE EXEC

The menu "Move Exec" (SP5-873-001) enables you to copy application programs from the original SD card to another SD card. The application programs are copied as follows:

- From slot 1 to slot 2 when SD cards are in slots 1 and 2 or in all slots
- From slot 1 to slot 3 when SD cards are in slots 1 and 3

Note that the authentication data is also copied with the application program (r 5.5.1).

- 1. Turn off the main power switch.
- 2. Make sure that an SD card is in slot 3 or in slots 2 and 3. The application program is copied to one of these SD cards.
- 3. Insert the SD card (having stored the application program) to slot 1. The application program is copied from this SD card.
- 4. Turn on the main power switch.
- 5. Start the SP mode.
- 6. Select SP5-873-001 "Move Exec."
- 7. Follow the messages displayed on the operation panel.
- 8. Go out of the SP mode.
- 9. Turn off the main power switch.
- 10. Remove the SD card from slot 1.
- 11. Turn on the main power switch.
- 12. Check that the application programs run normally.

Service Tables

5.5.3 UNDO EXEC

The menu "Undo Exec" (SP5-873-002) enables you to copy back application programs from an SD card to the original SD card. You can use this program when, for example, you have mistakenly copied some programs by using Move Exec (SP5-873-001). The application programs are copied as follows:

- From slot 1 to slot 2 when SD cards are in slots 1 and 2 or in all slots
- From slot 1 to slot 3 when SD cards are in slots 1 and 3

Note that the authentication data is also copied with the application program (r 5.5.1).

- 1. Turn off the main power switch.
- 2. Insert the original SD card in slot 2. The application program is copied back to this card.

NOTE: You can insert the original SD card in slot 3. If you do this, remove the SD card from slot 2 if there is one there.

- 3. Insert the SD card (having stored the application program) to slot 1. The application program is copied back from this SD card.
- 4. Turn on the main power switch.
- 5. Start the SP mode.
- 6. Select SP5-873-002 "Undo Exec."
- 7. Follow the messages displayed on the operation panel.
- 8. Go out of the SP mode.
- 9. Turn off the main power switch.
- 10. Remove the SD card from slot 3.
- 11. Remove the other SD card from slot 1.
- 12. Insert the necessary SD card in slot 3. If two SD cards are necessary, insert them in slots 2 and 3.
- 13. Turn on the main power switch.
- 14. Check that the application programs run normally.
5.6 CONTROLLER SELF-DIAGNOSTICS

5.6.1 OVERVIEW

There are three types of self-diagnostics for the controller.

- Power-on self-diagnostics: The machine automatically starts the self-diagnostics just after the power has been turned on.
- Detailed self-diagnostics: The machine does the detailed self-diagnostics by using a loop-back connector (P/N G0219350)
- SC detection: The machine automatically detects SC conditions at power-on or during operation.

The following shows the workflow of the power-on and detailed self-diagnostics.

G106S905.WMF

5.6.2 DETAILED SELF-DIAGNOSTICS

This detailed self-diagnostic test requires a loop-back connector (P/N: G0219350).

- 1. Turn off the machine and attach the loop-back connector to the parallel interface.
- 2. Turn on the machine while pressing the "On Line" key and "# Enter" key together.
- 3. The machine automatically starts the self-diagnostics and prints the diagnostic report after completing the test.
 - Refer to the diagnostics report for the detected errors. The errors detected during self-diagnostics can be checked with SP7-832-001 (Diag. Result).
 - Refer to section 4.2 for details about the error codes.

5.7 USER PROGRAM MODE

Starting a User Program

- 1. Push the menu key to start the user program mode.
- 2. Use the up arrow key and the down arrow key to select a program.
- 3. Push the enter key to start the program.

NOTE: To return to step 1, press the escape key one or more times.

Quitting a User Program

Push the online key or push the escape key one or more times until "ready" is shown.

6. DETAILED DESCRIPTIONS

6.1 MODEL J-P3 AND MODEL J-P2

While reading this chapter, keep Model J-P2 Service Manual at hand. This chapter frequently refers to Model J-P2.

Model J-P3 and Model J-P2 have common features and components. Model J-P2 Service Manual gives you the information on these features and components. This chapter illustrates the features and components that are supported only by Model J-P3.

6.2.2 DRIVE LAYOUT

1. Development drive motor-K:

This drives the development unit for black, the fusing unit, and the paper exit section.

- 2. **Development drive motor-CMY:** This drives the color development units (magenta/cyan/yellow), the registration roller, and the waste toner collection coils from the PCUs.
- 3. **Drum drive motor-K:** This drives the black PCU and the collection coil in the waste toner bottle.
- 4. **Drum drive motor-CMY:** This drives the PCUs for magenta, cyan, and yellow.
- 5. **Paper feed motor:** This drives the paper feed mechanisms (tray 1/tray 2/by-pass tray).
- 6. **Transfer belt contact motor:** This moves the transfer belt into contact and away from the color PCUs.
- 7. **Transfer unit drive motor:** This drives the transfer unit.
- 8. **Waste toner vibrator:** This motor makes vibrations. Because of this, waste toner does not block the waste toner path.

6.2.3 BOARD STRUCTURE

Overview

The BCU controls all mechanical components. The PCI bus connects the BCU and controller. These optional components can be installed on the controller:

- IEEE 1284, IEEE 1394, IEEE 802.11b, or Bluetooth
- Memory DIMM
- Hard disk drive

Descriptions

BCU (Base Engine Control Unit):

The BCU has three CPUs (Main, MUSIC, and DSP). The CPUs control the following components and processes:

Main CPU

- Engine sequence
- Machine and printer engine operation
- Peripherals
- High voltage supply, laser emission, fusing
- Sensors, drive board, solenoids
- Motors

MUSIC (Mirror Unit for Skew and Interval Correction) CPU

- TD sensor
- Line position adjustment

• Memory chip on the toner cartridge

DSP (Digital Signal Processor)

• Line position adjustment

Controller:

The controller handles the following functions:

- Printer-to-host interface
- Operation panel interface
- USB interface
- Standard network interface
- Optional interfaces (IEEE 1284, IEEE 1394, IEEE 802.11b [Wireless LAN], Bluetooth)
- HDD, DRAM DIMM

LD Drive Board:

This is the laser diode drive circuit board.

DRB:

The DRB (driver board) controls the paper feed motor, development motors (color/black), drum drive motors (color/black), transfer unit drive motor, and transfer voltage.

USB:

Offers simple connectivity for computers, printers, keyboards, and other peripherals.

OVERVIEW

IEEE 1284 Interface (Optional):

This is a parallel printer port.

IEEE1394 Interface (Optional):

This allows computers to connect to this printer using an IEEE1394 interface.

Bluetooth (Optional):

Provides radio links between mobile computers, mobile phones and other portable handheld devices.

IEEE 802.11b (wireless LAN) (Optional):

Uses radio frequency technology to transmit and receive data over the air and minimize the need for wired connections.

HDD Unit (Optional):

The HDD unit stores the data for the following.

- Additional soft fonts
- Collation
- Locked print
- Sample print
- Downloading forms for form overlay

Memory DIMM (Standard: 128 MB DRAM, Optional: 64/128/256 MB DRAM):

This is for additional printer processing memory, used for collation and for soft fonts.

Operation Panel Board:

Controls the display panel, the LED, and the keypad.

6.3 LASER EXPOSURE

6.3.1 OVERVIEW

- 1. Synchronizing detector board-Y, K-E
- 2. LD unit-Y
- 3. LD unit-K
- 4. LD Mirror-M
- 5. LD unit-M
- 6. LD unit-C
- 7. F-theta lens-M, C
- 8. Synchronizing detector board-M, C-S
- 9. Synchronizing detector board-M, C-E

- 10. OPC drum-M
- 11.WTL
- 12. OPC drum-C
- 13.OPC drum-Y
- 14.OPC drum-K
- 15. Synchronizing detector board-Y, K-S
- 16. F-theta lens-Y, K
- 17. Polygon mirror motor
- 18.LD Mirror-K

Model J-P3 has four LD units, two hexagonal mirrors, and one polygon-mirror motor. One hexagonal mirror is on top of the other; the two mirrors are on the same pivot. The polygon-mirror motor drives this pivot, and this turns the two mirrors at the same time. The upper mirror reflects the beams from LD unit-Y and LD unit-C; the lower mirror reflects the beams from LD unit-K and LD unit-M.

The beams from LD unit-Y and LD unit-K are reflected to the left side (viewed from the front of the machine); the beams from LD unit-M and LD unit-C are reflected to the right side. Laser exposure for magenta and cyan starts from the rear side of the drums; laser exposure for yellow and black starts from the front side of the drums.

Description

6.3.2 OPTICAL PATH

The laser beams for cyan [A] and yellow [B] are directed to the upper part of the polygon mirror [C], and those for magenta [D] and black [E] are directed to the lower part of the polygon mirror. The LD mirrors (see the previous page) deflect the laser beams for magenta and black towards the lower polygon mirror.

The WTL [F] corrects the main scan line; without this component, the line bends out towards the middle of the main scan. The central bend of the WTL is adjusted in the factory.

The speed of the polygon mirror depends on the selected mode (see below).

Mode	Resolution (dpi)	Polygon motor speed (rpm)	Process line speed (mm/s)	Print speed (ppm)
B/W (except OHP/Thick	600 x 600 1,200 x 600	38,273	162	35
paper)	1,200 x 1,200	29,528	62.5	14
Color (except OHP/Thick	600 x 600 1,200 x 600	38,273	162	35
paper)	1,200 x 1,200	29,528	62.5	14
OHP/Thick	600 x 600 1,200 x 600 1,200 x 1,200	29,528	62.5	10

6.3.3 LD SAFETY SWITCH

A safety switch turns off when the front cover, the upper left cover, or the right door is opened. As a result, the relay on the PSU cuts off the power supply (+5V) to the four LD boards. (The electric circuits go through the BCU.) This system prevents unexpected laser emission, and makes sure of user safety and technician safety.

There are two safety switches: the Right Door SW is for the right door, and the Front and Upper Left Cover SW is for the front cover and the upper left cover. (The Front and Upper Left Cover SW turns off when the front cover or the upper left cover is open.)

Front and Upper Left Cover Switch

The front cover and the upper left cover are mechanically linked to the actuator [B]. The actuator is mechanically linked to the safety switch [A] on the PSU. When one of these covers is closed or opened, the actuator connects or disconnects the switch.

Detailed Descriptio

E-MAC: Enhanced Modulation ASIC on CMOS

LDB: LD Drive Board (included in the LD Unit)

6.4 PHOTOCONDUCTOR UNIT

6.4.1 OVERVIEW

- 1. Cleaning roller
- 2. Charge roller (non-contact)
- 3. OPC drum
- 4. Cleaning brush

- 5. Waste toner collection auger
- 6. Lubricant bar
- 7. Cleaning blade

This machine has four independent PCUs, one for each color. Each PCU consists of an OPC drum, non-contact charge roller, cleaning brush, and cleaning blade. The diameter of the drum is 30 mm (circumference: about 94.25 mm).

The photoconductor gap between a PCU and the corresponding development roller is determined by the drum positioning plate and the rear shaft, and is not adjustable in the field.

The push switches in the drum positioning plate detect when a new PCU has been installed.

6.4.2 DRUM CHARGE AND QUENCHING

This machine uses a non-contact charge roller [A] to reduce ozone. The noncontact charge roller gives the drum surface a negative charge. The high voltage supply board–C, which is located at the rear of the machine, applies a dc and ac voltage (at a constant voltage which is decided by process control) to the roller. The ac voltage helps to ensure that the charge given to the drum is as uniform as possible.

The machine automatically controls the charge roller voltage if automatic process control is enabled (i.e., if SP3-125-001 is set to 0). However, if process control is switched off, (i.e., if SP3-125-001 is set to 1), the dc voltage is the value stored in SP2-001-1 to -9 (do not adjust in the field unless advised to do so).

The diameter of the roller is 11.14 mm (circumference about 35 mm). The gap between a drum and the corresponding charge roller is about 50 μ m.

The cleaning roller [B], which always contacts the charge roller, cleans the charge roller.

The charge roller can generate small amounts of nitrogen oxide gases (known as NOx), which may be absorbed by the surface of the drum. This can cause unfocused copies. To avoid this, the film of NOx is removed at power on, at the end of a job (if more than 200 prints), and when a toner cartridge has been replaced. SP3-920-001 to 004 determine when this procedure (known as "refresh mode") is done. It can also be executed at any time (using SP3-920-5) if the prints are smeared.

Quenching is done by illuminating the whole area of the drum with the laser at the end of every job.

6.4.3 DRUM CLEANING

G106D903.WMF

The cleaning brush [A] spreads out the waste toner remaining on the drum. The cleaning blade [B] then scrapes it off. The toner collection auger [C] transports the toner towards the waste toner collection duct.

The lubricant bar [D] is on the cleaning brush. The cleaning brush rubs against the lubricant bar and lubricates the drum surface. Excess lubricant is removed by the cleaning blade and sent to the waste toner collection duct.

6.4.4 WASTE TONER COLLECTION

Waste Toner Path

The waste toner from the collection augers in the four PCUs drops into the waste toner collection duct from the four openings [F][G][H][I] at the rear of the PCUs. The toner collection coils [J][K][L][M] in the duct transport this waste toner towards the waste toner bottle [A]. The coil [J] is driven by the development drive motor–K. The coils [K][L][M] are driven by development drive motor-CMY. The openings and PCUs correspond as follows: black \rightarrow [F], yellow \rightarrow [G], cyan \rightarrow [H], magenta \rightarrow [I].

Detailed Descriptions

The waste toner from the transfer belt cleaning unit drops into the waste toner collection duct from another opening [E].

The end of the waste toner collection duct is in the waste toner bottle [A]. There are three openings [B][C] and one collection coil [D] in this part. The waste toner drops into the bottle through the openings. The collection coil [D] is driven by drum drive motor-K.

NOTE: This mechanism also removes excess lubricant (**•** 6.4.3).

Waste Toner Vibrator

The waste toner vibrator contains one motor [N]. The motor operates for about one second at a time. Its vibration prevents the waste toner from clogging the waste toner path. The table lists the conditions under which the motor operates.

Machine status	Motor operation
During machine start (machine initialization)	Two times
At the beginning of the process control	One time
Printing jobs that output five or less papers	At the job end if 3 or more papers have been output since the previous operation (of the motor) $(①)$
Printing jobs that output 6 or more papers	Every five papers and at the job end (2)

Suppose: The printer executes two jobs. The first job outputs one paper, and the second job outputs two papers. In this case, the motor operates one time at the end of the second job (see ①).

Suppose: The printer executes one job, and the job outputs 12 papers. In this case, the motor operates one time during the fifth printing, one time during the tenth printing, and one more time at the job end (see ⁽²⁾).

Suppose: The printer executes two jobs. The first job outputs one paper, and the second job outputs 12 papers. In this case, the motor operates one time during the fifth printing of the second job, one time during the tenth printing of the second job, and one more time at the end of the second job (see 2; This case does not satisfy condition 1).

6.5 PAPER FEED LINE SPEED

This machine has three process line speeds (for feed from registration roller to fusing unit) depending on the selected resolution

Mode	Resolution (dpi)	Line speed (mm/s)	Print speed (ppm)
B/W	600 x 600 1,200 x 600	162	35
	1,200 x 1,200	62.5	14
Color	600 x 600 1,200 x 600	162	35
	1,200 x 1,200	62.5	14
OHP/Thick	600 x 600 1,200 x 600 1,200 x 1,200	62.5	10

During a monochrome print job, the machine changes the line speed if there is a page with color in the middle of the job. However, it will not change the line speed if there is a monochrome page in the middle of a color print job.

	Line speed (mm/s)
Paper feed from tray to registration roller	230
Fusing, paper exit to standard tray, and mailbox	A bit slower than "Process line speed"
Duplex invert and feed	370
Finisher	450

6.6 IMAGE TRANSFER AND PAPER SEPARATION

6.6.1 OVERVIEW

- 1. Transfer unit drive motor
- 2. Transfer belt
- 3. Rotation encoder
- 4. Paper attraction roller
- 5. Transfer roller
- 6. Back-up roller

- 7. Cleaning blade
- 8. Toner collection auger
- 9. Cleaning brush
- 10. Cleaning unit
- 11.ID sensor

Paper is fed to the transfer belt before image transfer begins. The paper attraction roller charges the paper to ensure that the paper is attracted to the belt.

The magenta, cyan, yellow, and black color images transfer to the paper while the transfer belt feeds the paper past the drums towards the fusing unit. A positive charge is applied to the paper under the transfer belt, opposite each drum, to transfer the toner from the drums onto the paper. The back-up roller ensures that the contact area between the drum and belt is sufficient.

The cleaning unit in the transfer unit cleans the belt surface with the cleaning blade and brush. The waste toner collected from the belt is transported to the waste toner bottle.

There are three ID sensors (front, center, and rear). Only the center ID sensor detects the image density of the patterns generated on the transfer belt for process control. The other function of the ID sensors is for automatic line position adjustment. All ID sensors are used for this.

6.6.2 TRANSFER BELT DRIVE

Drive Motor

The transfer unit drive motor [A] drives the transfer belt [B] and the cleaning unit via the timing belt and gears. The speed of transfer belt drive depends on the process line speed.

Rotation Encoder

An encoder [C] is on one of the rollers. This encoder checks the rotation speed of the transfer belt. The controller analyzes the signals from the encoder, and adjusts the rotation speed of the transfer belt.

The encoder contains a disk that has 300 notches on its surface [B]. These notches are read by the sensor [A]. The controller counts the number of notches that the sensor has read in the unit of time. If the sensor has read an unusually large number of notches or an unusually small number of notches, the controller ignores such unusual signals. Thanks to this feature, incorrect reading does not affect the rotation speed.

- Filter H: The number of notches read by the sensor when the rotation speed of the transfer belt is at its possible highest.
- Filter L: The number of notches read by the sensor when the rotation speed of the transfer belt is at its possible lowest.

ACS (Auto Color Sensing) Mode

The machine can print in the color or monochrome mode (selected with the printer driver). In the color mode, ACS can be switched on or off with a user tool (default: on).

If ACS is on, the transfer belt stays in the default position (against the K drum only) until a page with color data on it appears. The transfer belt then moves against all four drums and stays there until the end of the job, even if some K only pages appear.

If ACS is off and the color mode is selected, all data is printed with the transfer belt positioned against all four drums. The belt does not move even if a K only page appears, even if it is at the start of the job.

Regardless of the ACS mode setting, this machine counts a K only page as a black-and-white page. Because of this, the K only pages (with the ACS mode on) [A] and the K only pages (with the ACS mode off) [B] are each counted as black-and-white pages.

6.7 FUSING

6.7.1 FUSING TEMPERATURE CONTROL

Fusing Temperatures

When the main switch turns on, the CPU turns on the fusing lamp. The lamp stays on until the thermistor detects the standby temperature. Then the CPU raises the temperature to the printing temperature.

The fusing temperature for each mode is as follows.

	Mode	Resolution (dpi)	Temperature of Heating Roller	Temperature of Pressure Roller	Note
	Energy saver level 1		100°C	150°C	
	Standby mode		175°C	155°C	If SP1-104- 025 is set to 1
		1200 x 1200	145°C	125°C	
	Color	1200 x 600 600 x 600	185°C	160°C	
		1200 x 1200	145°C	125°C	
	Black and white	1200 x 600 600 x 600	185°C	160°C	
	OHP	All	160°C	145°C	
	Thick	All	170°C	150°C	
	Color	1200 x 1200	140°C	120°C	
J	(duplex)	1200 x 600 600 x 600	180°C	155°C	
	Black and white	1200 x 1200	140°C	120°C	
	(duplex)	1200 x 600 600 x 600	180°C	155°C	

The heating and pressure roller temperatures for fusing are stored in SP1-105-004 to 028 and SP1-105-051 to 054.

When the machine is switched on, the fusing lamp temperatures increase to those specified by SP1-104-025.

The print ready temperature is slightly less than the fusing temperature. The difference is specified by SP1-105-001 and 002.

Temperature Corrections

To prevent excessive glossiness caused by fusing temperature overshoot, the following SP modes are available:

- 1-913: Fusing temperature is reduced after this number of pages during the job.
- 1-914: This shows how much the temperature is reduced

If a job using OHP or thick paper starts while the fusing unit is still warm, the fusing temperature could be higher than the target for this type of paper, causing marks on the output. To prevent this problem, we have the following SP modes:

 1-996-004, 005: These SPs specify a limit, above which printing will not start.

Overheat Protection

If the heating roller temperature is more than 220°C, the CPU cuts off the power to the fusing lamp and SC543 occurs.

If the pressure roller temperature is more than 200°C, the CPU cuts off the power to the fusing lamp and generates SC553 occurs.

If thermistor overheat protection fails, there are the thermostat for the heating roller and two thermofuses for the pressure roller in series with the common ground line of the fusing lamp.

- If the thermostat temperature becomes higher than 225°C, the thermostat opens, removing power from the fusing lamp.
- If either of the two thermofuses temperature becomes higher than 126°C, the thermofuse opens, removing power from the fusing lamp.

NOTE: These thermofuses make a series circuit.

In either case, the machine stops operation.

6.7.2 ENERGY SAVER MODE

When the machine is not being used, the energy saver feature reduces power consumption by switching off the fusing lamps. This machine has two energy saver modes.

Level 1 Energy Saver Mode

The default of the level 1 energy saver mode is "Off." If the user enables it, the level 1 energy saver mode starts 30 seconds after the machine has completed a print. In this mode, the fusing lamps are intermittently turned on and off to keep the heating roller at 100°C and pressure roller at 150°C.

The machine leaves this mode when one of the following happens:

- Print command received from a PC
- Any cover opened and closed
- Any operation panel key pressed

Level 2 Energy Saver Mode

The level 2 energy saver mode starts after the machine has been idle for a certain time. This time is specified by a user tool as listed below. During the level 2 energy saver mode, both lamps are off.

- Off (energy saver mode never activates)
- 5 minutes
- 15 minutes
- 30 minutes
- 45 minutes
- 60 minutes (default)

When the machine is in this mode, the machine turns off +24 V, +12 V, and +5 V lines. However, only +5 VE lines, for the controller and GAPCI (voltage monitoring ASIC) on the BCU, are still active.

The machine leaves this energy saver mode when one of the following happens:

- Print command received from a PC
- Any operation panel key pressed
- **NOTE:** The machine does not leave the level 2 energy saver mode when covers are opened and closed, because the CPU on the BCU is not active.

6.8 CONTROLLER

6.8.1 OVERVIEW

G106D912.WMF

Architecture:	Ground Work Architecture (GW Architecture)
CPU:	RM7065C (600 MHz)
ASIC: RAM:	Clarinet and Cymbals (Bus Clock: 120 MHz) PC133 SDRAM DIMM Standard: 128 MB (not removable) Optional (1 slot): 64/128/256 MB
Program ROM:	On-Board Flash ROM (4 MB)
Font ROM:	None*
IC Card:	Not supported
SD Card Slots:	3 (Printer application programs, Maintenance work)

6.8.3 CONTROLLER FUNCTIONS

Paper Output Tray

You can select the default output tray with this user tool: Menu > System > Output Tray. If the printer driver does not specify an output tray (or if the driver specifies the default tray), the default output tray is used.

Output Tray Selected

- If the printer cannot use the selected output tray, it uses the default output tray.
- If paper overflow is detected at the selected output tray, the controller stops printing.

Stapling

The optional two-tray finisher and booklet finisher can staple outputs. Both finishers support the following stapling positions:

- [A]: One staple (vertical) at the rear right corner
- [B]: Two staples (vertical) at the right middle edge
- [C]: One staple (vertical) at the front right corner

The two-tray finisher supports the following stapling position (the booklet finisher does not): [D]: One staple (slant) at the front right corner

The booklet finisher supports the following stapling position (the two-tray finisher does not):

[E]: Two staples (vertical) at the center

The table lists the number of sheets that the finishers can staple.

	Position	Pape	r size
	1 0311011	A4, B5, LT	A3, Ledger, Legal
Two-tray finisher	[A][B][C][D]	50 sheets	30 sheets
Booklet finisher	[A][B][C]	50 sheets	25 sheets
BOOKIELIINISHEI	[E]	—	10 sheets

NOTE: For the paper sizes, see the specifications.

CONTROLLER

Punching

You must install an optional punch unit on the finisher. Each punch unit needs a dedicated punch unit. Note that these punch units are not interchangeable with each other. For example, to make two holes on a sheet of paper, you must install the two-hole type. The table shows the types that you can install on your finisher.

Finisher model	Two holes	Three holes	Four holes
North America	×	×	N/A
Europe (excluding North Europe)	×	N/A	×
North Europe	N/A	N/A	×

3. SOFTWARE ACCESSORIES

The printer drivers and utility software are provided on one CD-ROM. An auto-run installer allows you to select which components to install.

3.1 PRINTER DRIVERS

Printer Language	Windows 95/98/ME	Windows NT4.0	Windows 2000	Windows XP	Macintosh OS 8/9	Macintosh OS X
PCL 5c	Yes	Yes	Yes	Yes	No	No
PS3	Yes	Yes	Yes	Yes	Yes	Yes
RPCS	Yes	Yes	Yes	Yes	No	No

NOTE: 1) The printer drivers for Windows NT 4.0 are only for the Intel x86 platform. There is no Windows NT 4.0 printer driver for the PowerPC, Alpha, or MIPS platforms.

- 2) The PS3 drivers are all genuine AdobePS drivers, except for Windows 2000, which uses Microsoft PS. A PPD file for each operating system is provided with the driver.
- 3) The PS3 driver for Macintosh supports Mac OS 8.6 or later versions.

3.2 UTILITY SOFTWARE

Software	Description
Agfa Font Manager 2000 (Win95/98/ME, 2000/XP, NT4)	A font management utility with screen fonts for the printer.
SmartDeviceMonitor for Admin (Win95/98/ME, 2000/XP, NT4)	A printer management utility for network administrators. NIB setup utilities are also available.
SmartDeviceMonitor for Client (Win95/98/ME, 2000/XP, NT4)	 A printer management utility for client users. A utility for peer-to-peer printing over a NetBEUI or TCP/IP network. A peer to peer print utility over a TCP/IP network. This provides the parallel printing and recovery printing features.
PS Utility for Mac (Mac)	This software provides several convenient functions for printing from Macintosh clients.
IEEE1394 Utility (Win2000)	This utility solves problems with Windows 2000.
DeskTopBinder V2 Lite (Win95/98/ME, 2000/XP, NT4)	DeskTopBinder V2 Lite itself can be used as personal document management software and can manage both image data converted from paper documents and application files saved in each client's PC.
4. MACHINE CONFIGURATION

Unit	M'Code	Diagram	Remarks
Printer*	G106	В	
Two-Tray Finisher	G565	F	• Requires ① the HDD or 128 MB DIMM memory, ② the duplex unit, and ③ a paper feed unit or the LCT.
			 You cannot install the two-tray finisher and the booklet finisher on the same machine.
Punch Unit (for G565)	B377		Requires the two-tray finisher.
Booklet Finisher	B602	A	 Requires ① the duplex unit ② and a paper feed unit or the LCT. You cannot install the two-tray finisher and the booklet finisher on the same machine.
Punch Unit (for B602)	B647		Requires the booklet finisher.
Paper Feed Unit (500 x 1)*	G567	E	
Paper Feed Unit (500 x 2)*	G568	Н	You can install one of these three
LCT*	G569	G	
Duplex Unit (Inverter Unit)*	G382	D	
Duplex Unit (Feed Unit)*	0002	С	

* The user can install the unit.

5. OPTIONAL EQUIPMENT

5.1 500-SHEET TRAY

Paper Size:	Maximum: A3/11" x 17" (SEF)	
	Minimum: A5 (LEF)/81/2" x 11"	
Paper Weight:	60 to 105 g/m ² (16 to 28 lb.)	
Tray Capacity:	500 sheets (80 g/m ² , 20 lb.)	
Paper Feed System:	FRR system	
Paper Height Detection:	3 steps (100%, 50%, Near End)	
Power Source:	DC 24V, 5V (from the main unit)	
Power Consumption:	50 W	
Dimensions (W x D x H):	540 x 600 x 172 mm (21.3" x 23.7" x 6.8")	
Weight	18 kg (39.7 lb.)	

5.2 1000-SHEET TRAY

Paper Size:	Maximum: A3/11" x 17" (SEF) Minimum: A5 (LEF)/81/2" x 11"	
Paper Weight:	60 to 105 g/m ² (16 to 28 lb.)	
Tray Capacity:	500 sheets x 2 (80 g/m², 20 lb.)	
Paper Feed System:	FRR system	
Paper Height Detection:	3 steps (100%, 50%, Near End)	
Power Source:	DC 24V, 5V (from the main unit)	
Power Consumption:	50 W	
Dimensions (W x D x H):	540 x 600 x 270 mm (21.3" x 23.7" x 10.7")	
Weight	25 kg (55.2 lb.)	

5.3 2000-SHEET LARGE CAPACITY TRAY

Paper Size:	A4/81/2" x 11" (LEF)
Paper Weight:	60 to 105 g/m ² (16 to 28 lb.)
Tray Capacity:	2000 sheets (80 g/m ² , 20 lb.)
Paper Feed System:	FRR system
Paper Height Detection:	5 steps (100%, 75%, 50%, 25%, Near End)
Power Source:	DC 24V, 5V (from the main unit)
Power Consumption:	30 W
Dimensions (W x D x H):	540 x 600 x 270 mm (21.3" x 23.7" x 10.7")
Weight	25 kg (55.2 lb.)

Spec.

5.4 TWO-TRAY FINISHER & PUNCH UNIT

Print Paper Size:	No punch mode: A3/11" x 17" to A5 (LEF)/81/2" x 11" Punch mode: 2 holes: A3/11" x 17" to A4/81/2" x 11" (SEF) A4/81/2" x 11" to A5 (LEF) 3 holes: A3, B4, 11" x 17" (SEF) A4, B5, 81/2" x 11" (LEF) 4 holes (Europe): A3, B4, 11" x 17" (SEF) A4, B5, 81/2" x 11" (LEF) 4 holes (North Europe): A3, B4, 11" x 17" (SEF) A4, B5, 81/2" x 11" (LEF) Staple mode: A3/11" x 17" to B5/81/2" x 11"
Paper Weight:	No punch mode: 60 to 105 g/m ² (16 to 28 lb.) Punch mode: 60 to 105 g/m ² (16 to 28 lb.) Staple mode: 64 to 90 g/m ² (17 to 23 lb.) Label/Thick paper/OHP cannot be stapled
Tray Capacity:	Upper tray: 500 sheets: A4, 81/2" x 11", B5, A5 (LEF) 250 sheets: 11" x 17", A3, 81/2" x 14", B4 Lower tray (default mode – stapled output only goes to tray 2): 2000 sheets: A4, 81/2" x 11" (LEF) 750 sheets: A3, B4, A4, B5, 81/2" x 14", 11" x 17", 81/2" x 11" (SEF) 500 sheets: A5 (LEF) Lower tray (multi-tray staple mode – stapled output can go to either tray): 1500 sheets: A4, 81/2" x 11" (LEF) 750 sheets: A3, B4, A4, B5, 81/2" x 14", 11" x 17", 81/2" x 11" (SEF) 500 sheets: A3, B4, A4, B5, 81/2" x 14", 11" x 17", 81/2" x 11" (SEF) 500 sheets: A3, B4, A4, B5, 81/2" x 14", 11" x 17", 81/2" x 11" (SEF) 500 sheets: A5 (LEF)
Staple capacity:	Single size: 50 sheets: A4, 81/2" x 11" , B5 30 sheets: A3, B4, 81/2" x 14", 11" x 17" Mixed size: 30 sheets: A4 (LEF) & A3, B5 (LEF) & B4, 81/2" x 11" (LEF) & 11" x 17"
Staple position:	7 positions 1-staple: 4 positions (Top Left, Top Right, Top Left-Oblique, Top Right-Oblique) 2-staples: 3 positions (Left, Top, Right)

SPECIFICATIONS

Staple replenishment:	Cartridge (5000 staple	es)
Power consumption:	48 W	
Dimensions (W x D x H):	680 x 620 x 1030 mm	(26.8" x 24.4" x 40.6")
Weight	Without punch unit:	53 kg (116.9 lb.)
	With punch unit:	55 Kg (121.3 lb.)

5.5 BOOKLET FINISHER

Paper Size:	A3, A4, B4, B5, DLT, LG, LT	
Booklet Paper Size:	A3, B4, A4 SEF, DLT, LG, LT SEF	
Paper Weight:	Stack/Sort mode: 60 to 128 g/m ² (16 to 34 lb.) Staple mode: 64 to 90 g/m ² (17 to 24 lb.) Booklet mode: 64 to 80 g/m ² (17 to 21 lb.)	
Tray Capacity:	1,000 sheets: A4, LT, B5 500 sheets: A3, B4, DLT, LG	
Booklet Tray Capacity:	2 to 5 sheets/booklet: 20 6 to 10 sheets/booklet: 10	
Staple capacity:	A4, B5, LT: 50 sheets A3, B4, DLT, LG: 25 sheets	
Booklet capacity:	10 sheets	
Staple position:	3 positions (excluding booklet mode) 1-staple: 2 positions (Top right, Top left) 2-staples: 1 positions (Left)	
Staple replenishment:	Cartridge (5000 staples)
