```

[Modifications made:]
Rank C

Symptom corrected:
- @remote communication with Cumin may be disconected

```
-------------------------------------------------------------------------
```
[Modification history]
```
-----------------------------------------
```
Version 1.12
Symptom corrected:
1. SC955 may occur if the user prints out a document that contains a
   blank page and the optional hard disk is not installed.
2. The machine may freeze and display "Printing..." under the
   following conditions:
   - Paper size error detection is ON (default)
   - Tray switching is ON
   - A one-page job is sent to the printer
   - A paper size error occurs
   - A second job is sent to the printer before the paper size error
     is cleared
   - Both jobs are set to print out to the bypass tray

```
-----------------------------------------
```
Version 1.11
Symptom corrected:
The printer becomes unable to communicate if it receives a Unicast
packet with an all-zero MAC address (the printer's ARP table is
overwritten).

```
-----------------------------------------
```
Version 1.10
Symptom corrected:
1. After the date/time setting is changed, the machine mistakenly
   detects an access attack, resulting in delayed response during
   authentication.
2. Under the following conditions, the login screen is displayed
   after the "Authenticating..." screen (instead of the SDK
   application screen or the login failed dialog):
   - An authentication SDK application is not installed
   - "Authenticating..." screen is displayed at the point of 5
     minutes after the machine main power is turned ON
3. Under the following conditions, the software keyboard is
   displayed after logout dialogs (instead of the MFP Copier or
   other main screen):
   - An authentication SDK application is not installed

- "Cannot log out" or "Logging out..." screen is displayed at the
   point of 5 minutes after the machine main power is turned ON
4. A memory leak occurs when the user logs in if User Authentication
   and the Auto Logout Timer are both enabled.
5. Extended Authentication Management can be disabled by users other
   than the Machine Administrator.
6. Alert LED malfunction: The alert LED lights up red when it should
   not (no message is displayed), or does not light up when it
   should (a message is displayed).

Version 1.09
Symptom corrected:
1. Paper jams might result in SC899 (or SC991) errors.
2. Paper jams might result in some duplex pages being output twice.

Version 1.08
Symptom corrected:
SC819 (Kernel stop) occurs sometime after a low-volume job is sent
that results in an engine paper size error.

Version 1.07
Symptom corrected:
1. Cannot move the HDD Encryption option to another SD card.
2. Might not receive a print job when a machine is in energy saving
   mode.
3. SC899 may occur when a machine is powered on.
4. Stored jobs (Locked Print, Sample Print, etc.) might not be shown
   in the operation panel if the DataOverwriteSecurity Unit is
   installed.
5. SC819 occurring during use of an SDK/J application under very
   specific conditions.

Version 1.06
Symptoms Corrected:
HDD encryption does not function properly.
Some words may not be displayed correctly.

IMPORTANT:
System firmware part number M0475840E was released on October 23,
2010 does not contain the above changes and it was not used on the
production machines. To apply these changes, you must install the
System firmware version 1.06.

Version 1.05

The version and P/N suffix were changed in accordance with the modification of the Printer firmware.
Note: In terms of content, this firmware is the same as the previous version.

Version 1.04
Symptoms Corrected:
1. SC 817 occurs after the firmware is updated via RFU.
2. Translation errors in French. (After sending E-mail,
   "Err. donees TX e-mail" was shown instead of "Err. donees RX e-mail")

Version 1.03
Symptom corrected:
1. The Envelope Lever Alert is displayed even if it is disabled
   (Maintenance > General Settings > Envelope Lever Alert > Do not
   Display).
Note: To fix this problem, Printer firmware version 1.03 or later
      and System firmware version 1.03 or later both need to be
      applied to the device.

Version 1.02
Symptom corrected:
1. After the optional paper tray is installed, the WIM >
   Configuration > Device Settings > Paper tray dropdown list might
   contain the unsupported paper types OHP, Envelope, and Special 3.
   Furthermore, some supported paper types might be removed from the
   list.
2. If an IPDS job in the device side print queue is suspended (Web
   Image Monitor > Job > Current/Waiting Jobs > Suspend Printing),
   Web Image Monitor stops responding.

Version 1.00
1st Mass production
