SV2P (China only):	Ricoh JP1260P, Gestetner 5310P		

This bulletin contains all service-related information unique to Model SV2P (C253), which is scheduled for official release in China in October 2003. Please add this information to your Silver Series Service Manuals and also refer to RTB #R-C231-013 for Silver-V2 information

Note: Please also see MB #M-C237-015 for a list of the components unique to the SV2P.

1. OVERALL INFORMATION

1.1 DIFFERENT SECTIONS BETWEEN THE C253 AND C248

Service Manual:

Section	Item	Remarks
1	Overall Information	Some items added.
2	Detailed section descriptions	<i>(no differences)</i>
3	Installation	<i>(no differences)</i>
4	Service tables	<i>(no differences)</i>
5	Preventive maintenance	<i>(no differences)</i>
6	Replacement and adjustment	<i>(no differences)</i>
7	Point to point diagrams	<i>(no differences)</i>
8	Printer controller unit	New documents

1.2 SEPECIFICATIONS

The specifications are identical to those for the C248, except that an embedded Printer Controller Unit has been added.

No.	Item	Remarks
1	Model names	Ricoh Priport JP1260P (C253-96) Gestetner 5310P (C253-82)
2	Printer controller unit	Embedded Printer Controller Unit fitted as standard
3	Printer drivers	Drivers support Chinese

8. PRINTER CONTROLLER UNIT

Trademarks

Symbols

This manual uses several symbols. The meanings of these symbols are as follows:

	See or Refer to
	Clip ring
	E-ring
	Screw
	Connector

Model: PRIPORT SILVER/SILVER-V/SILVER-V2/SV2P

Date: 30-Sep-03

No: R-C231-015

INSTALLATION

The SV2P is equipped with a standard printer controller unit and Video I/F board. Connect the printer controller unit to the host computer with a parallel cable. Then, install the printer driver in the host computer.

Host computer	IBM PC/AT compatible PC
Interface	IEEE1284B (Compatible, Nibble, ECP)
Operating Systems Supported	Windows 95/98/Me, Windows NT4.0, Windows 2000/XP
Printer Driver	Digital Duplicator B4 300 GDI

NOTE: The Printer drivers for Windows NT4.0 are only for the Intel x86 platform. There is no Windows NT4.0 printer driver for the PowerPC, Alpha, or MIPS platforms.

REPLACEMENT AND ADJUSTMENT

⚠ CAUTION

Before removing any of the controller components, make sure to do the following:

1. If the 'data-in' lamp on the operation panel is blinking or lit, wait until the document or report is printed. Then turn off the machine.
2. Turn off the main switch. Then disconnect the power cord from the outlet and the cable from the machine.

NOTE: This manual uses the following symbols:

Screw: 

Connector: 

CONTROLLER BOARD MEMORY

C249R951.WMF

[A]: Cover

[B]: Keypad board

NOTE: When you attach the connector [C] make sure to attach it in the correct direction and position [D].

C249R952.WMF

[A]: Connector

[B]: Printer controller board

[C]: SIMM module

NOTE: The twisted portion of the harness [D] should fit loosely and close to the controller board.

VIDEO I/F BOARD

[A]: Video I/F Board

LOAD PROGRAM

This procedure is for upgrading the system firmware for the controller.

NOTE: If the controller does not start up after a firmware update, try to download the firmware again. If it still does not work, you may need to replace the flash ROM on the printer controller board.

CAUTION

Do not turn off the machine while downloading the firmware.

1. Before downloading new firmware, print the test page. Then check the current version.
2. Turn off the machine.
3. Remove the rear cover and the controller cover.
4. Put the jumper next to the flash ROM into the position [A].
5. Turn on the machine.
6. Boot up the PC and access the MS-DOS prompt or Command Prompt.
7. Use the COPY command to update the flash ROM. e.g.
"copy file_name LPT1:" (where LPT1 is the connected port).

C249R957.WMF

8. While the flash ROM is updating, the left LED [B] on the control button board remains lit.

9. When the left LED flashes rapidly, the process has completed.
10. Turn off the machine.
11. Put the jumper into the off position [C] next to the flash ROM.
12. Turn on the machine and then print out the test page using the test page button. Then check the new version.

C249R958.WMF

TEST PAGE

Press the test page button [A] on the keypad board. The right LED will start to flash quickly. This indicates that the controller is in the process of creating the test page.

TROUBLESHOOTING

TROUBLESHOOTING FLOWCHART

LED STATUS LIGHT SEQUENCE AND CONDITIONS

Power on and activation

STATUS	CONTENTS	CHECK POINT
All LEDs are off	No power supply	No AC power. AC cord not properly connected. Power supply failure in the controller.
Right LED is on	Power on	-
Left LED is flashing	Self-diagnostic test before ready	-
Left LED is flashing rapidly	Receiving data	-
Left LED is on continuously	Transferring data Making a master	-
Left LED is continuously off	Idle	-
Left LED flashing slowly and evenly	Error on engine	Check message on operation panel.

Model: PRIPORT SILVER/SILVER-V/SILVER-V2/SV2P

Date: 30-Sep-03

No: R-C231-015

Test page button

STATUS	CONTENTS	CHECK POINT
Left LED is flashing	Receiving data	-
Left LED is on	Making a master	-
Left LED continuously on	Printing	-
Left LED flashes and goes off. LED stays off.	No response from the engine.	Turn the engine Off/On. Check if the controller is properly connected to the engine. Check if the engine is online. Check if SIMM card is positioned correctly.
Left LED flashes slowly and evenly.	Engine error	Check the error message on the engine. Check if the controller is properly connected to the engine.

PRINTER DRIVER OPERATION

If the Windows test page does not print or does not look right, check the printer driver operation using these steps:

1. Select the Details tab in the Properties menu of the printer driver.
2. Change the port connection to "File:"
3. Click the Apply button. Then select the General tab and click the Print test page button.
4. Set the file name (e.g. test.prn). Then set the disk/directory location. Save the file.
5. Click "YES" when the message pops up and asks whether the test page printed correctly.
6. Access the MS-DOS prompt or Command Prompt.
7. Check that the engine and controller are ready for printing. Then execute the following command at the MS-DOS prompt or Command Prompt. "copy /b test.prn lpt1"

NOTE: 1) Always input "/b" after the Copy command.

2) The above example applies if the file name saved in the step 4 is "test.prn".

3) If the controller is connected to the second PC port, replace "lpt1" with "lpt2".

8. Input "exit". Then exit from the MS-DOS prompt or command prompt.
9. If the test page has printed correctly, change the printer driver port from "File:" back to its previous setting.

SERVICE TABLE

There are no SP modes for the printer controller unit.

DETAILED DESCRIPTIONS

OVERVIEW

C249D950.WMF

DESCRIPTION	CONTROLLER
CPU	Analog Devices ADSP chip
RAM	16MB (SIMM)
Flash ROM	1MB EPROM

REF.	CONNECTOR		DESCRIPTION
	Name	Configuration	
A	IEEE1284 I/F	26-pin socket	To IEEE1284 Interface
B	Engine Interface	26-pin socket	To video I/F board
C	Power connector	4-pin socket	To power cable
D	SIMM Interface	72-pin SIMM	For connecting the SIMM module
E	Upgrade firmware jumper	2-pin	Upgrading controller firmware

MACHINE LAYOUT
