3. DETAILED DESCRIPTIONS

3.1 ORIGINAL SIZE DETECTION

C578O006.WMF

The DF has three width sensors (- 1 [A], - 2 [B], and - 3[C]) to detect the original width and two original length sensors (-1 [D] and -2 [E]) to detect the original length. The DF detects the original size through the combination of those five sensors as shown in the table on the next page.

3.2 PICK-OFF AND SEPARATION MECHANISM

When the Start key is pressed, the DF pick-up solenoid [A] turns on and the originals are lifted up to the pick-up roller [B] by the entrance guide [C]. At the same time, the DF feed clutch [D] turns on.

At 300 ms after this, the DF feed motor turns on. The original is fed to the paper feed belt [E] from the top page. The pages are separated by the separation roller [F] and the top sheet of the original is fed to the 1st transport roller [G]. The original separation system uses the FRR system.

3.3 ORIGINAL TRANSPORT AND EXIT MECHANISM

When the leading edge of the original reaches the registration sensor [A], the DF feed motor turns off. After a short time the DF feed motor turns on again. The original is fed to the DF exposure glass [B] and it is scanned in this area. The original is fed through to the 2nd transport roller [C] and fed out by the exit roller [D].

The DF feed motor speed while feeding the original to the registration sensor is 47.5 mm/s. However, when the motor turns on again to feed the original to the exposure glass, the speed depends on the selected reproduction ratio. At 100%, it is 42.33 mm/s.

3.4 OVERALL ELECTRICAL CIRCUIT

C578O502.WMF

The DF pick-up solenoid and DF feed clutch are directly controlled by the CPU of the main body through the DF drive board. The sensor signals are directly sent to the main body through the DF interface board. The DF drive board has a driver for the DF feed motor and its drive signal is sent from the main body. When the DF connector is connected to the I/O board of the main body, the DF connection signal to the main body is grounded. Then the main body detects that the DF is connected.
